HERODOTUS,

TRANSLATED FROM THE GREEK,

WITH NOTES,

BY THE REV. WILLIAM BELOE.

IN FOUR VOLUMES.

VOL. II.

THE SECOND EDITION, CORRECTED AND ENLARGED.

LONDON:

Printed by Luke Hansard, near Lincoln's-Inn Fields; for

LEIGH AND S. SOTHEBY, 145, STRAND; J. SOTHEBY;
J. WALKER; R. LEA; CUTHELL AND MARTIN;
J. MURRAY; AND J. HARDING.

1806.
The name of Sesostris, who lived after these monarchs, claims our attention. According to the priests, he was the first who, passing the Arabian gulph in a fleet of long vessels, reduced under his authority the inhabitants bordering on the

\[\text{179 Sesostris.]}—\text{See Bouhier's Chronological Account of the Kings of Egypt from Mœris to Cambyses, according to which Mœris died in the year of the world 3360, and was succeeded by Sesostris in 3361.}

Diodorus Siculus makes this prince posterior to Mœris by seven generations; but, as Larcher justly observes, this writer cannot be entitled to an equal degree of credit with Herodotus. Sesostris has been differently named: Tacitus calls him Rhampses; Scaliger, both Rhamesses and Egyptus. He is named Sesostris in Diodorus Siculus; Sesosis in Pliny, &c.—T.
Erythrean Sea. He proceeded yet farther, till he came to a sea, which on account of the number of shoals was not navigable. On his return to Egypt, as I learned from the same authority, he levied a mighty army, and made a martial progress by land, subduing all the nations whom he met with on his march. Whenever he was opposed by a people who proved themselves brave, and who discovered an ardour for liberty, he erected columns in their country, upon which he inscribed his own name, and that of his nation, and how he had here conquered by the force of his arms; but where he met with little or no opposition, upon similar columns 180 which he erected, he added the private parts of a woman, expressive of the pusillanimity of the people.

CIII. Continuing his progress, he passed over from Asia to Europe *, and subdued the countries of

180 Upon similar columns, &c.]—Diodorus Siculus relates the same facts, with this addition, that upon the columns intended to commemorate the bravery of the vanquished, Sesostris added the private parts of a man.—T.

Nous ignorons si les Hermès caracterisés par la nature feminine, et erigés par Sesostris dans les pays qu'il avait conquis sans resistance, avoient été figurés de la même manièrè; ou si, pour indiquer le sexe, ils avoient un triangle, par lequel les Égyptiens avoient coutume de le désigner.—Winkelmann.

* Grobert, above cited, thinks that Sesostris must undoubtedly have vanquished Italy. Any one, says he, that
of Scythia and Thrace. Here I believe he stopped*, for monuments of his victory are discovered thus far, but no farther. On his return, he came to the river Phasis; but I am by no means certain whether he left a detachment of

will be at the trouble of comparing the physiognomy and manners of the people of Calabria with those of the Egyptians, will easily believe this to have been the fact.

131 Thrace.]—According to another tradition preserved in Valerius Flaccus, the Getæ, the bravest and most upright of the Thracians, vanquished Sesostris; and it was doubtless to secure his retreat, that he left a detachment of his troops in Colchis.

Cunabula gentis
Colchidos hic ortusque tuens: ut prima Sesostris
Intulerit rex bella Getis: ut clade suorum
Territus, hos Thebas patriumque reducat ad annem
Phasidis hos imponat agris, Colchosque vocari
Imperet. Larcher.

* Among the arguments adduced by Robertson against the probability that Sesostris conquered India, the following is much entitled to attention:

It is remarkable that Herodotus, who inquired with the most persevering diligence into the ancient history of Egypt, and who received all the information concerning it which the priests of Memphis, Heliopolis, and Thebes could communicate, although he relates the history of Sesostris at some length, does not mention his conquest of India. That tale, it is probable, was invented in the period between the age of Herodotus and that of Diodorus Siculus, from whom we receive a particular detail of the Indian expedition of Sesostris.—Robertson on India, p. 336.

I have little scruple in avowing my belief that almost the whole of the story of Sesostris is fabulous.

132 Whether he left, &c.]—Pliny assures us, though I know not on what authority, that Sesostris was defeated by the Colchians.—Larcher.
CIV. The Colchians certainly appear to be of Egyptian origin; which indeed, before I had conversed with any one on the subject, I had always believed. But as I was desirous of being satisfied, I interrogated the people of both countries: the result was, that the Colchians seemed to have better remembrance of the Egyptians, than the Egyptians had of the Colchians. The Egyptians were of opinion, that the Colchians were descended from part of the troops of Seesostris. To this I myself was also inclined, because they are black, and have short and curling hair; which latter circumstance may not, however, be insisted upon as evidence, because it is common to many other nations. But a second and better argument is, that the inhabitants of Colchos, Egypt, and Ethiopia, are the only people who from time immemorial have used circumcision. The Phœnicians and the Syrians of

---

257 Short and curling hair.—"That is," says Volney, in his remark on this passage, "that the ancient Egyptians were real negroes, of the same species with all the natives of Africa; and though, as might be expected, after mixing for so many ages with the Greeks and Romans, they have lost the intensity of their first colour, yet they still retain strong marks of their original conformation."
Palestine* acknowledge that they borrowed this custom from Egypt. Those Syrians who live near the rivers Thermodon and Parthenius, and their neighbours the Macrones, confess that they

* The following note from Shaw deserves attention; p. 390.

Herodotus, always too credulous with regard to these boasted antiquities of the Egyptians, insists likewise that circumcision was much earlier received by them than by the Syrians of Palestine, i.e. the Hebrews or Israelites; for the Philistines themselves, who were originally Egyptians, and gave name to the country, were uncircumcised. Now by considering Gen. xlvi. ver. 12, in the original text, agreeably to the Hebrew diction and brevity of expression, we may receive one plausible argument why Herodotus may be equally mistaken in this assertion. For the Rabbinical commentators observe upon the sense which we translate, And behold, your eyes see, and the eyes of my brother Benjamin, that it is my mouth that speaketh unto you, that Joseph gave the patriarchs therein three proofs of his being their brother. The first was the token of circumcision, peculiar at that time, as they affirm, to the family of Abraham, which he is supposed to have discovered by unfolding his garment whilst they stood near him, and bIDDING them regard it. Behold, says he, your eyes see by this token that I am no stranger, but of the lineage of Abraham. And then to shew that he was not descended from Ishmael, he lays down for his second proof the near resemblance of his own features to those of his brother Benjamin, who was born of the same mother. And behold, he continues, the eyes or countenance of my brother Benjamin; how nearly they resemble my own. The third proof was his language, &c. &c. The whole of what follows is exceedingly ingenious and very corroborative of the main argument.

It seems to be implied also, Jeremiah ix. ver. 25, 26, that the Egyptians were not circumcised at the time when that prophet lived, viz. 630 or 640 years before Christ, which was not 200 years before Herodotus flourished and wrote his history.
learned it, and that too in modern times, from
the Colchians. These are the only people who
use circumcision, and who use it precisely like the
Ægyptians. As this practice can be traced both
in Ægypt and Æthiopia to the remotest antiquity,
it is not possible to say who first introduced it.
The Ægyptians certainly communicated it to the
other nations by means of their commercial in-
tercourse. The Phœnicians, who are connected
with Greece, do not any longer imitate the
Ægyptians in this particular, their male children
not being circumcised.

CV. But the Colchians have another mark of
resemblance to the Ægyptians. Their manufac-
ture of linen 185 is alike, and peculiar to those two
nations;

184 Syrians of Palestine.]—Mr. Gibbon takes the oppor-
tunity of this passage to make it appear, that under the Assyrian and Persian monarchies, the Jews languished for many ages the most despised portion of their slaves. "Herodotus," says the English historian, "who visited Asia whilst it obeyed the Persian empire, slightly mentions the Jews of Palestine." But this seems to be a partial quotation; for taking into consideration the whole of the context, Herodotus seems precluded from mentioning the Syrians of Palestine in this place otherwise than slightly.—T.

It is indeed certain that Herodotus could know nothing of the Jews, for it is utterly impossible that they should con-
fess that they borrowed the rite of circumcision from the Ægyptians.

185 Manufacture of linen.]—See chapter xxxvii. of this book.—T.

To which may be added the following remark from Har-
nations; they have similar manners, and the same language. The linen which comes from Colchis the Greeks call Sardonian; the linen of Egypt, Egyptian.

As for the linen yarn mentioned in Scripture, it is still, according to Norden, one of the principal of their merchandises, and is sent away in prodigious quantities along with unmanufactured flax and cotton spun. To which I would add this remark of Sanutus, who lived about 400 years ago, that though Christian countries abounded in his time in flax, yet the goodness of the Egyptian was such that it was dispersed all about, even into the West; for the same reason, without doubt, the Jews, Hittites, and Syrians anciently purchased the linen yarn of this country, though they had flax growing in their own.

186 Sardonian.]—In the original, for Σαρδονικοῦ, Larcher recommends the reading of Σαρδονικοῦ, which he justifies by saying that Sardis was a far more proper and convenient market for this kind of linen than Sardinia.

This latter country in ancient times had the character of being remarkably unhealthy. "Remember," says Cicero, writing to his brother, "though in perfect health, you are in Sardinia." Martial also,

Nullo fata loco possis excludere, cum mors
Venerit, in medio Tibure, Sardinia est.

This country also gave rise to many peculiar phrases: Sardi venales, Risus Sardonicus, Sardonia tinctura, &c. The first is differently explained; Cicero, applying it to Gracchus, who after the capture of Sardinia wasted much time in selling his prisoners, makes it to signify any matter tediously protracted. Others, applying it to the Asiatic Sardis, make it signify persons who are venal. The Sardonic laugh is that beneath which the severest uneasiness is concealed. "Sardinia," says Solinus, "produces a herb which has this singular
CVI. The greater part of the pillars which Seesostris erected in the places which he conquered, are no longer to be found. Some of them I myself have seen in Palestine of Syria, with the private members of a woman, and with the inscriptions which I have before mentioned. In Ionia there are two figures of this king, formed out of a rock; one is in the road from Ephesus to Phocæa, the other betwixt Sardis and Smyrna. Both* of them represent a man, five palms in height; the right hand holds a javelin, the left a bow; the rest of the armour is partly Ægyptian and partly Æthiopian. Across his breast, from shoulder to shoulder,

singular property, that whilst it destroys whoever eats it, it so contracts the features, and in particular of the mouth, into a grin, as to make the sufferer appear to die laughing." Of this herb, Solinus relates other strange properties. Sardinia was also famous for a very beautiful colour, whence Sardonia tinctura was made to signify a modest blush. See Pliny, Solinus, Hoffman, &c.

Larcher observes that Mingrelia, the antient Colchis, is still famous for such manufacture of linen. The linen of Ægypt is thus mentioned in Ezekiel, c. xxvii. v. 7.

Fine linen, with broidered work from Ægypt, was that which thou spreadest forth to be thy sail.

Again, in Proverbs, c. vii. v. 16.

I have decked my bed with coverings of tapestry, with carved works, with fine linen of Ægypt.

* Either no travellers have taken the rout from Phocæa to Ephesus, and from Sardis to Smyrna, or they have neglected to inquire whether any traces of these stupendous statues are yet visible.
shoulder, there is this inscription in the sacred characters of Ægypt, “I conquered this country by the force of my arms." Who the person here represented is, or of what country, is not specified; both are told elsewhere. Some have been induced, on examination, to pronounce this to be the figure of Memnon, but they must certainly be mistaken.

CVII. The same priests informed me that Sesostris returned to Ægypt with an immense number of captives, of the different nations which he had conquered. On his arrival at the Pelusian Daphne, his brother, to whom he had confided the government in his absence, invited him and his family to take up their abode with him; which when they had done, he surrounded their apartments with combustibles, and set fire to the building. As soon as Sesostris discovered the villainy, he deliberated with his wife, who hap-

* The following line from Claudian appears, says Larcher, to be a translation of this passage of Herodotus:

Ast ego qua terras humeris pontumque subegi.

187 Set fire to the building.]—Diodorus Siculus relates the matter differently. The brother of Sesostris made him and his attendants drunk, and in the night set fire to his apartment. The guards, being intoxicated, were unable to assist their master; but Sesostris, imploring the interposition of the gods, fortunately escaped. He expressed his gratitude to the deities in general, and to Vulcan in particular, to whose kindness principally he thought himself indebted.—T.
pened to be with him, what measures to pursue; she advised him to place two of their six children across the parts which were burning, that they might serve as a bridge for the preservation of themselves and of the rest. This Sesostris executed: two of the children consequently perished, the remainder were saved with their father.

CVIII. Sesostris did not omit to avenge himself on his brother: on his return to Ægypt, he employed the captives of the different nations he had vanquished, to collect those immense stones which were employed in the temple of Vulcan. They were also compelled to make those vast and numerous canals\(^{138}\) by which Ægypt is intersected.

\(^{138}\) *Numerous canals.*—Probably one reason why Sesostris opened canals, was to prevent these hurtful inundations, as well as to convey water to those places where they might think proper to have villages built, and to water the lands more conveniently, at such times as the waters might retire early; for they might find by experience, after the canals were opened, that, instead of apprehending inundations, they had greater reason, as at present, to fear a want of water.—*Pococke.*

There are still eighty canals in Ægypt like rivers, several of which are twenty, thirty, and forty leagues in length.—*Savary.*

The same author adds, that the chain-buckets used in Ægypt to disperse the water over the high lands gave to Archimedes, during his voyage in Ægypt, the idea of his ingenious screw, which is still in use.

A country
intersected. In consequence of their involuntary labours, Egypt, which was before conveniently adapted to those who travelled on horseback or in carriages, became unfit for both. The canals occur

A country where nothing is so seldom met with as a spring, and where rain is an extraordinary phenomenon, could only have been fertilized by the Nile. Accordingly from times of the most remote antiquity, fourscore considerable canals were digged at the entrance of the kingdom, beside a great number of small ones, which distributed these waters all over Egypt.—Raynal.

The following note, abridged, from Larcher, is highly honourable to him:

Sesostris, says Volney, lived before Moses, and, according to Herodotus, cut so many canals in Egypt, that it became impossible to travel in chariots. The Bible, therefore, must relate a fable, for it says that Pharaoh pursued the Israelites in six hundred chariots.

Unluckily for Volney, replies Larcher, the first assertion is not true. The passage of the Red Sea took place one hundred and seventy-five years before the time of Sesostris. This miracle took place in the year 3183, of the Julian period, 1331 years before our æra. Sesostris mounted the throne in the year 3358, of the Julian year, which is 1356 years before our æra.

Volney should have remembered that he was a candidate for a prize at the Academy of Belles Lettres, on a subject relating to chronology. His memoir was indignantly rejected, as indeed it deserved. I advise him to study chronology, or rather never again to write on subjects connected with it.

I have much satisfaction in introducing the above castigation of an author, whose bold assertions and fallacious reasonings have done so much mischief to the public, particularly from a pen so well qualified to detect and expose his errors and falsehoods.
occur so often, and in so many winding directions, that to travel on horseback is disagreeable, but in carriages impossible. The prince however was influenced by a patriotic motive: before his time those who inhabited the inland parts of the country, at a distance from the river, on the ebbing of the Nile suffered great distress from the want of water, of which they had none but from muddy wells.

CIX. The same authority informed me, that Sesoostris made a regular distribution of the lands of Ægypt. He assigned to each Ægyptian a square piece of ground; and his revenues were drawn from the rent, which every individual annually paid him. Whoever was a sufferer by the inundation of the Nile, was permitted to make the king acquainted with his loss. Certain officers were appointed to inquire into the particulars of the injury, that no man might be taxed beyond his ability. It may not be improbable to suppose that this was the origin of geometry, and that the Greeks learned it from hence. As

139 Origin of geometry.]—The natives of Thebes, above all others, were renowned for their great wisdom. Their improvements in geometry are thought to have been owing to the nature of their country; for, the land of Ægypt being annually overflowed, and all property confounded, they were obliged upon the retreat of the waters to have recourse to geometrical decision, in order to determine the limits of their possessions.—Bryant.
to the pole, the gnomon \(^{190}\), and the division of the day \(^{191}\) into twelve parts, the Greeks received them from the Babylonians.

\(^{190}\) *The pole, the gnomon.*—The text is a literal translation of the original, to which as it stands it will not be very easy to annex any meaning. My own opinion, from reflecting on the context, is, that it signifies a dial with its index. Wesseling, in his note on this passage, informs us from Pollux, that many considered πόλος and ἀπομονοῦσ as synonymous expressions. Scaliger is of the same opinion, to which Wesseling himself accedes. Salmasius thinks differently, and says of this particular passage, ne hoc quidem quidquam ad horologiorum usum facit. Larcher's interpretation seems far-fetched. "He," says the learned Frenchman, "who wishes to form a solar quadrant must necessarily know the altitude of the pole."—When it is considered that the more ancient dials were divided by the first twelve letters of the alphabet, I cannot help adhering to the interpretation I have given of it.—T.

\(^{191}\) *Division of the day.*—From this passage it appears, that in the time of Herodotus the day was divided into twelve parts: at the same time we may not conclude, with Leo Allatius, and Wesseling, that to these twelve parts the name of hours was given. It is by no means certain when the twenty-four parts of the day were first distinguished by the name of hours, but it was doubtless very late; and the passages cited from Anacreon and Xenophon to prove the contrary ought not to be interpreted by what we call hours.

The passage in Anacreon, μετονυκτίως τοῦ ἥρει, means nothing more than the middle of the night. Νυκτὸς ἀμφιγείν, in Homer, which signifies an advanced time of the night, is explained by the Scholiast ἀπ' τοῦ μετονυκτίων ἥρει, the very expression of Anacreon. The passage from Xenophon is not more decisive.—Larcher.

Upon this subject we have the following curious note in the *Voyage du Jeune Anacharsis*.:—Of the dials of the ancients we may form some idea from the following example: Palladius Rutilius, who lived about the fifth century, and
CX. Except Sesostris, no monarch of Ægypt was ever master of Æthiopia. This prince placed as a monument \(^9\) some marble statues before the temple of Vulcan*: two of these were thirty cubits who has left us a treatise on agriculture, has put at the end of every month a table, in which one sees the correspondence of the divisions of the day to the different lengths of the shadow of the gnomon. It must be observed in the first place, that this correspondence is the same in the months equally distant from the solstice. January and December, February and November, &c. Secondly, that the length of the shadow is the same for the hours equally distant from the mid-day point. The following is the table for January:

This dial seems to have been adapted for the climate of Rome. Similar dials were constructed for the climate of Athens.

\(^9\) Placed as a monument.[—Larcher, in his version, adds in this place, "to commemorate the danger he had escaped." The text will not justify this version, though the learned Frenchman's opinion, that this is the implied meaning, rests on the positive assertion of Diodorus Siculus, who, relating the fact of the statues circumstantially, adds that they were erected by Sesostris in gratitude to Vulcan, by whose interposition he escaped the treachery of his brother.

—T.

* One of the trophies brought by our victorious army from Ægypt, is the fist of a colossean statue. It was found by the French in the ruins of Memphis, and very possibly belonged to a statue of Vulcan.
cubits in height, and represented him and his queen; four others, of twenty cubits each, represented his four children. A long time afterwards, Darius king of Persia was desirous of placing before these a statue of himself, but the high priest of Vulcan violently opposed it, urging that the actions of Darius were far less splendid than those of the Egyptian Sesostris. This latter prince had vanquished as many nations as Darius, and had also subdued the Scythians, who had never yielded to the arms of Darius. Therefore, says he, it can never be just to place before the statues of Sesostris, the figure of a prince, whose exploits have not been equally illustrious. They told me that Darius forgave this remonstrance.

193 A statue of himself. — After a series of ages, when Egypt was reduced under the power of Persia, Darius, the father of Xerxes, was desirous of placing an image of himself at Memphis, before the statue of Sesostris. This was strenuously opposed by the chief priest, in an assembly of his order, who asserted that the acts of Darius had not yet surpassed those of Sesostris. The king did not take this freedom amiss, but was rather pleased with it; saying, that if he lived as long as Sesostris, he would endeavour to equal him. — Diodorus Siculus.

194 Forgive this remonstrance. — It does not however appear from hence that Darius was ever in Egypt. The resistance of the chief priest might probably be told him, and he might forgive it. It appears by a passage in Aristotle, that Darius attacked and conquered this country; if so, the priest of Vulcan might personally oppose Darius. The authority of Aristotle is of no weight, compared with that of our
EUTERPE.

CXI. On the death of Sesostris, his son Pheron, as the priests informed me, succeeded to his throne. This prince undertook no military expedition; but by the action I am going to relate, he lost the use of his eyes:—When the Nile was at its extreme height of eighteen cubits, and had overflowed the fields, a sudden wind arose, which made the waters impetuously swell. At this juncture the prince hurled a javelin into the vortex of the stream: he was in a moment deprived of sight, and continued blind for the space of ten years; in the eleventh, an oracle was communicated to him from Butos, intimating that the period of his punishment was expired, and that he should recover his sight, by washing his eyes with the urine of a woman, who had never known any man but her husband. Pheron first made the experiment with the urine of his own wife, and when this did not succeed, he applied that of other women indiscriminately. Having at length recovered his sight, he assembled all the women, except her whose urine had removed our historian; and probably, in that writer, instead of Darius we should read Xerxes.—Lavcher.

If Darius Hystaspes be intended, this prince certainly was in Egypt, in the army of Cambyses, but I believe not whilst a king.

Pheron.]—This prince is supposed to be the first Egyptian Pharaoh; but this must be erroneous, for the Israelites were oppressed by Pharaoh one hundred and seventy years before this reign.
moved his calamity, in a city which is to this day called Erythrebolos; all these, with the town itself, he destroyed by fire, but he married the female who had deserved his gratitude. On his recovery he sent magnificent presents to all the more celebrated temples; to that of the sun he sent two obelisks, too remarkable to be unnoticed; each was formed of one solid stone, one hundred cubits high, and eight broad.

CXII. The successor of Pheron, as the same priests informed me, was a citizen of Memphis, whose name in the Greek tongue was Proteus. His

Erythrebolos.]—Diodorus Siculus calls this place Heliopolis; and says that the woman, through whose means Pheron was cured of his blindness, was the wife of a gardener.

This certainly proves that great corruption of manners prevailed at this time in Egypt, and Larcher judiciously refers, at this passage, to the precaution taken by Abraham on entering this country. See Genesis, c. xii. v. 11.

The profligacy also of the wife of Potiphar towards Joseph, affords a similar testimony.—T.

Proteus.]—Proteus was an Egyptian title of the deity, under which he was worshipped, both in the Pharos and at Memphis. He was the same as Osiris and Canopus, and particularly the god of mariners, who confined his department to the sea. From hence I think we may unravel the mystery about the pilot of Menelaus, who is said to have been named Canopus, and to have given name to the principal sea-port in Egypt.—Bryant.
His shrine is still to be seen at Memphis; it is situated to the south of the temple of Vulcan, and is very magnificently decorated. The Phœnicians of Tyre dwell in its vicinity, and indeed the whole of the place, is denominated the Tyrian camp. In this spot, consecrated to Proteus, there is also a small temple, dedicated to Venus the Stranger: this Venus I conjecture is no other

Scylax speaks of Canopus as if he seriously thought the island was denominated from the pilot of Menelaus.

No antique figure has yet been met with of Proteus: upon this circumstance Mr. Spence remarks, that his character was far more manageable for poets, than for sculptors or painters. The former might very well describe all the variety of shapes that he could put on, and point out the transition from one to the other, but the artists must have been content to shew him either in his own natural shape, or in some one alone of all his various forms. Of this deity the best description is given in the Georgics of Virgil.—T.

It is remarkable, that if we were to write the Egyptian name of Proteus, as given by the Greeks, in Phœnician characters, we should make use of the same letters we pronounce Pharao: the final o in the Hebrew is an h, which at the end of words frequently becomes t.—Volney.

It is doubtless this Venus to whom Horace alludes in the following verses:

Oh quee beatam diva tene Cyprum, et
Memphim carentem Sithonia nivē
Regina.

Strabo also speaks of this temple, and tells us that some believed it dedicated to the moon.—T.
other than Helen, the daughter of Tyndaris, because she, I was told, resided for some time at the court of Proteus, and because this building is dedicated to Venus the Stranger; no other temple of Venus is distinguished by this appellation.

CXIII. To my inquiries on the subject of Helen, these priests answered as follows: Paris having carried off Helen from Sparta, was returning home, but meeting with contrary winds in

The ancients had very little scruple or delicacy in building temples to their favourite beauties, simply adding Venus to their names.

Thus in Ægypt there was a temple at Alexandria to Venus Belestria, Belestria being the name of a slave of great beauty, the favourite of an Ægyptian prince. Venus Arsinoe was somewhat similar.—T.

199 Inquiries on the subject.]—Upon no subject, ancient or modern, have writers been more divided, than about the precise period of the Trojan war. Larcher, after discussing this matter very fully, in his Essay on Chronology, is of opinion, and his arguments appear to me at least, satisfactory, that it took place 1263 years before the vulgar æra.—T.

Since the publication of the first edition of this work, our countryman, Bryant, has produced a learned and elaborate work, to prove that the Trojan war never took place. This has of course led to a number of profound and critical investigations on the subject, in which the weight of argument and evidence appears to be against Bryant. I rather wonder that Larcher has taken no notice of Bryant's work.
in the Ægean, he was driven into the Ægyptian sea. As the winds continued unfavourable, he proceeded to Ægypt, and was driven to the Canopian mouth of the Nile, and to Tarichea: in this place was a temple of Hercules, which still remains; if any slave fled to this for refuge, and in testimony of his consecrating himself to the service of the god, submitted to be marked with certain sacred characters, no one was suffered to molest him. This custom has been strictly observed, from its first institution to the present period. The servants of Paris, aware of the privileges of this temple, fled thither from their master, and with the view of injuring Paris, became the suppliants of the divinity. They published many accusations against their master, disclosing the whole affair of Helen, and the wrong done to Menelaus: this they did, not only in the presence of the priests, but also before Thonis, the governor of the district.

209 Thonis.]—Some writers pretend that Thonis was prince of the Canopian mouth of the Nile, and that he was the inventor of medicine in Ægypt. Before he saw Helen he treated Menelaus with great respect; when he had seen her he made his court to her, and even endeavoured to violate her person: Menelaus on hearing this put him to death. The city of Thonis, and Thoth, the first Ægyptian month, take their names from him.

This narrative seems less probable than that of Herodotus: Theth, or the Mercury of the Ægyptians, was much more ancient.—Larcher.
CXIV. Thonis instantly dispatched a messenger to Memphis, with orders to say thus to Proteus: "There is arrived here a Trojan, who has perpetrated an atrocious crime in Greece; he has seduced the wife of his host, and has carried her away, with a great quantity of treasure; adverse winds have forced him hither; shall I suffer him to depart without molestation, or shall I seize his person and property?" The answer which Proteus sent was thus conceived: "Whoever that man is who has violated the rights of hospitality, seize and bring him before me, that I may examine him."

CXV. Thonis upon this seized Paris, and detaining his vessels, instantly sent him to Proteus, with Helen and all his wealth: on their arrival, Proteus enquired of Paris who he was, and whence he came: Paris faithfully related the name of his family and country, and from whence he last set sail. But when Proteus proceeded to make enquiries concerning Helen, and how he obtained possession of her person, Paris hesitated in his

This incident of the detention of Helen by Proteus, is the argument of one of the tragedies of Euripides.

The poet supposes that Helen never was at Troy, but that Paris carried thither a cloud in her form:—On the death of Proteus, his son Theaclymenus prepared to make Helen his wife; at this juncture Menelaus was driven on the coast, saw Helen again, and with her concerted and accomplished their return to Greece.—T.
answers; his slaves who had deserted him, explained and proved the particulars of his guilt; in consequence of which Proteus made this determination: "If I did not esteem it a very heinous crime to put any stranger to death, whom unfavourable winds have driven to my coast, I would assuredly, thou most abandoned man, avenge that Greek whose hospitality thou hast treacherously violated. Thou hast not only seduced his wife, but, having violently taken her away, still criminally detainest her; and, as if this were not enough, thou hast robbed and plundered him! But as I can by no means prevail upon myself to put a stranger to death, I shall suffer you to depart; the woman and your wealth I shall detain, till the Greek himself thinks proper to demand her.—Do you and your companions depart within three days from my coasts, or expect to be treated as enemies."

CXVI. Thus, according to the narrative of the priests, did Helen come to the court of Proteus. I conceive that this circumstance could not be unknown to Homer; but as he thought it less ornamental to his poem, he forbore to use it. That he actually did know it, is evident from that part of the Iliad, where he describes the voyage of Paris; this evidence he has no where retracted. He informs us, that Paris, after various wanderings, at length arrived at Sidon, in Phœncicia;
Phœnicia; it is in the Bravery of Diomed; the passage is this:

There lay the vestures of no vulgar art,
Sidonian maids embroider'd every part;
When from soft Sidon youthful Paris bore,
With Helen touching on the Tyrian shore.

II. vi. 390.

He again introduces this subject in the Odyssey:

These drugs, so friendly to the joys of life,
Bright Helen learn'd from Thone's imperial wife:
Who sway'd the sceptre where prolific Nile
With various simples clothes the fatten'd soil,
With wholesome herbage mix'd, the direful bane
Of vegetable venom taints the plain.

Od. iv. 315.

202 Bravery of Diomed.]—The different parts of Homer's poems were known anciently by names taken from the subjects treated in them:—Thus the fifth book of the Iliad was called the Bravery of Diomed; and in like manner the eleventh the Bravery of Agamemnon; the tenth the Night-watch, or the Death of Dolon, &c.; all of which titles are prefixed to the respective books in Clarke's and other editions from Eustathius:—See also Aelian, Var. Hist. Book xiii. c. 14. This division was more ancient than that into books, and therefore does not always coincide with it: thus the second Iliad has two names, the Dream or the Trial, and the Catalogue; whereas four or five books of the Odyssey are supposed to be comprized under the name of the Story of Alcinous. Valcuær erroneously supposed this to be a later division of the grammarians, and therefore endeavoured to explain away the expression of Herodotus, which evidently refers to it.—T.
Menelaus also says thus to Telemachus:

Long on the Egyptian coast by calms confin'd,
 Heaven to my fleet refus'd a prosperous wind;
 No vows had we prefer'd, no victim slain,
 For this the gods each favouring gale restrain.

Od. iv. 473.

In these passages, Homer confesses himself acquainted with the voyage of Paris to Egypt; for Syria borders upon Egypt, and the Phœnicians, to whom Sidon belongs, inhabit part of Syria.

CXVII. The last passage of these, confirms sufficiently the argument, which may be deduced from the former, that the Cyprian verses were

203 Cyprian verses,—On the subject of these verses the following sentence occurs in Athenæus.

"The person who composed the Cyprian verses, whether he was some Cyprian or Stasinus, or by whatever name he chooses to be distinguished," &c. From which it appears, that Athenæus had no idea of their being written by Homer. But we are told by Ælian, in his Various History, that Homer certainly did compose these verses, and gave them as a marriage portion with his daughter.—See Ælian, Book ix. chap. 15, in the note to which, this subject is amply discussed.—T.

The subject of this poem was the Trojan war, after the birth of Helen. Venus caused this princess to be born, that she might be able to promise Paris an accomplished beauty; to this Jupiter, by the advice of Momus, had consented, in order to destroy the human race again by the war of Troy, which was to take place on her account. As the author of this poem refers all the events of this war to Venus, goddess of Cyprus, the work was called by her name. "It is evident," says M. Larcher in continuation, "that Herodotus would have told the name of the author, had he known it."
never written by Homer. These relate that Paris, in company with Helen, assisted by a favourable wind and sea, passed in three days from Sparta to Troy; on the contrary, it is asserted in the Iliad, that Paris, after carrying away Helen, wandered about to various places. But enough of Homer and the Cyprian verses.

CXVIII. On my desiring to know of the same priests whether what the Greeks affirm concerning Troy, was true or false, they told me the following particulars, which they assured me they received from Menelaus himself. After the loss of Helen, the Greeks assembled in great numbers at Teucris, to assist Menelaus; they disembarked and encamped: they then dispatched ambassadors to Troy, whom Menelaus himself accompanied. On their arrival, they made a formal demand of Helen, and of the wealth which Paris had at the same time clandestinely taken, as well as general satisfaction for the injury. The Trojans then and afterwards uniformly persisted in declaring, that they had among them, neither the person nor the wealth of Helen, but that both were in Ægypt; and they thought it hard that they should be made responsible for what Proteus king of Ægypt certainly possessed. The Greeks, believing themselves deluded, laid siege to Troy, and persevered till they took it. But when Helen was not to be found in the captured town, and the same assertions
assertions concerning her were continued, they at length obtained credit, and Menelaus himself was dispatched to Proteus.

CXIX. As soon as he arrived in Ægypt he proceeded up the Nile to Memphis. On his relating the object of his journey, he was honourably entertained; Helen, who had been treated with respect, was restored to him, and with her, all his treasures. Inattentive to these acts of kindness, Menelaus perpetrated a great enormity against the Ægyptians: the winds preventing his departure, he took two children204 of the people of the country, and with great barbarity offered

204 Two children.]—This was doubtless to appease the winds. This kind of sacrifice was frequent in Greece, but detestable in Ægypt.

Sanguine placastis ventos et virgine caesà.—Virgil.

See Book vii. chap. 191.—Larcher.

In the early times of all religions, when nations were yet barbarous and savage, there was ever an aptness or tendency towards the dark part of superstition, which among many other horrors produced that of human sacrifice.—Lord Shaftesbury.

Lord S. might, and would, if he had been honest, have excepted the Jewish religion.

That the custom of human sacrifice, alike cruel and absurd, gives way but very slowly to the voice of nature and of reason, is evident from its having been practised at so late a period by the enlightened people of Greece. Porphyry also informs us, that even in his time, who lived 233 years after the Christian æra, human sacrifices were common in Arcadia and at Carthage.—T.
them in sacrifice. As soon as the circumstance was known, universal indignation was excited against him, and he was pursued; but he fled by sea into Africa, and the Ægyptians could trace him no further. Of the above facts, some they knew, as having happened among themselves, and others were the result of much diligent inquiry.

CXX. This intelligence concerning Helen, I received from the Ægyptian priests, to which I am inclined to add, as my opinion, that if Helen had been actually in Troy, they would certainly have restored her to the Greeks, with or without the consent of Paris. Priam and his connections could never have been so infatuated, as to endanger the preservation of themselves and their children, merely that Paris might enjoy Helen; but even if such had been their determination at first, still after having lost, in their different contests with the Greeks, many of their countrymen, and among these, if the poets may be believed, several of their king's own sons, I cannot imagine but that Priam, even if he had married her himself, would have restored Helen, if no other means had existed of averting these calamities. We may add to this, that Paris was not the immediate heir to the crown, for Hector was his superior both in age and valour: Paris, therefore, could not have possessed any remarkable influence
ence in the state, neither would Hector have countenanced the misconduct of his brother, from which he himself, and the rest of his countrymen, had experienced so many and such great calamities. But the restoration of Helen was not in their power, and the Greeks placed no dependence on their asse tions, which were indisputably true; but all this, with the subsequent destruction of Troy, might be ordained by Providence, to instruct mankind that the gods proportioned punishments to crimes.

'CXXI.' The same instructors farther told me, that Proteus was succeeded by Rhampsinitus 265: he built the west entrance of the temple of Vulcan; in the same situation he also erected two statues, twenty-five cubits in height. That which faces the north the Egyptians call summer, the one to the south winter: this latter is treated with no manner of respect, but they worship the former, and make offerings before it. This prince possessed such abundance of wealth, that far from surpassing, none of his successors ever equalled him in affluence. For the security of his riches, he constructed a stone edifice, con-

---

265 Rhampsinitus.]—Diodorus Siculus calls him Rhemphis, He greatly oppressed his subjects by his avarice and extortions: he amassed in gold and silver four hundred thousand talents; a most incredible sum.—Larcher.
connected with his palace by a wall. The man whom he employed, with a dishonest view, so artfully disposed one of the stones, that two or even one person might remove it from its place. In this building, when completed, the king deposited his treasures. Some time afterwards, the artist found his end approaching; and having two sons, he called them both before him, and informed them in what manner, with a view to their future emolument and prosperity, he had built the king's treasury. He then explained the particular circumstance and situation of the stone, gave them minutely its dimensions, by observance of which, they might become the managers of the king's riches. On the death of the father, the sons were not long before they availed themselves of their secret. Under the advantage of the night, they visited the building, discovered and removed the stone, and carried away with them a large sum of money. As soon as the king entered the apartment, he saw the vessels which contained his money materially diminished; he was astonished beyond measure, for as the seals were unbroken, and every entrance properly secured, he could not possibly direct his suspicion against any one. This was several times re-

206 The man whom he employed.]—Pausanias relates a similar fable of Trophonius, whose cave became so famous.—Larcher.
peated; the thieves continued their visits, and the king as regularly saw his money decrease. To effect a discovery, he ordered some traps to be placed round the vessels which contained his riches. The robbers came as before; one of them proceeding as usual directly to the vessels, was caught in the snare: as soon as he was sensible of his situation, he called his brother, and acquainted him with it; he withal intreated him to cut off his head without a moment’s delay, as the only means of preventing his own detection and consequent loss of life; he approved and obeyed his advice, and replacing properly the stone, he returned home with the head of his brother. As soon as it was light the king entered the apartment, and seeing the body secured in the snare without a head, the building in no part disturbed, nor the smallest appearance of any one having been there, he was more astonished than ever. In this perplexity he commanded the body to be hanged from the wall, and having stationed guards on the spot, he directed them to seize and bring before him whoever should discover any symptoms of compassion or sorrow at sight of the deceased. The mother being much exasperated at this exposure of her son, threatened the surviving brother, that if he did not contrive and execute some means of removing the body, she would immediately go to the king, and disclose all the circumstances of the
the robbery. The young man in vain endeavoured to alter the woman's determination; he therefore put in practice the following expedient:—He got together some asses, which he loaded with flasks of wine; he then drove them near the place where the guards were stationed to watch the body of his brother; as soon as he approached, he secretly removed the pegs from the mouths of two or three of the skins, and when he saw the wine running about, he began to beat his head, and to cry out vehemently, with much pretended confusion and distress. The soldiers, perceiving the accident, instantly ran with vessels, and such wine as they were able to catch they considered as so much gain to themselves. At first, with great apparent anger, he reproached and abused them, but he gradually listened to their endeavours to console and pacify him: he then proceeded at leisure to turn his asses out of the road, and to secure his flasks. He soon entered into conversation with the guards, and affecting to be pleased with the drollery of one of them, he gave them a flask of wine; they accordingly sat down to drink, and insisted upon his bearing them company: he complied with their solicitations, and a second flask was presently the effect of their civility to him. The wine had soon its effect, the guards became exceedingly drunk, and fell fast asleep; under the advantage of the night, the young man took
took down the body of his brother, and in derision shaved* the right cheeks of the guards; he placed the body on one of the asses, and returned home, having thus satisfied his mother. When the king heard of what had happened, he was enraged beyond measure; but still determined on the detection of the criminal, he contrived

* This, as Larcher observes, was, throughout the East, considered as the greatest mark of ignominy and contempt that could possibly be imposed upon a man. Hanun, King of the Ammonites, shaved the messengers of David by way of contempt, and sent them away. See 2 Sam. c. x. v. 4, 5.

Wherefore Hanun took David's servants, and shaved off the one half of their beards, and cut off their garments in the middle, even to their buttocks, and sent them away.

When they told it unto David, he sent to meet them, because the men were greatly ashamed: and the king said, tarry at Jericho until your beards be grown, and then return.

In this place Larcher makes a false reference, namely, to the second Book of Kings, instead of the second Book of Samuel. See also 1 Chronicles c. xix. v. 4.

See also a very strong parabolical expression in Isaiah, c. vii. v. 20.

"In the same day shall the Lord shave with a razor that is hired, namely, by them beyond the river, by the king of Assyria, the head, and the hair of the feet, and it shall also consume the beard."

Consult Bishop Lowth on this passage.

The expression denotes the utter devastation of the country from one end to the other, and the plundering of the people from the highest to the lowest.

To pluck a man's beard in the East is the highest mark of insult which can be shewn. "I gave my back to the smiters, and my cheeks to them that plucked off the hair." Isaiah, c. l. v. 6.
trived this, which to me seems a most improbable part of the story:—He commanded his daughter to prostitute her person indiscriminately to every comer, upon condition that, before enjoyment, each should tell her the most artful as well as the most wicked thing he had ever done; if any one should disclose the circumstance of which he wished to be informed, she was to seize him, and prevent his escape. The daughter obeyed the injunction of her father; the thief, knowing what was intended, prepared still farther to disappoint and deceive the king. He cut off the arm near the shoulder from his brother’s recently dead body, and, concealing it under his cloak, he visited the king’s daughter: when he was asked the same question as the rest, he

A fine beard is still held in great veneration in all Eastern countries, and inferiors sometimes kiss the beards of their superiors, but it is a great indignity to touch it, unless with reverence.

Thevenot informs us that it is customary among the Turks to swear by the beard.

Shylock, in the Merchant of Venice, complains of the indignity offered him in this respect:

You that did void your rheum upon my beard,
And foot me as you spurn a stranger cur.

*Most improbable.* — Herodotus, we may perceive from this passage, did not implicitly credit all the priests told him. Many other passages occur in the process of the work, to prove that our historian was by no means so credulous as has been generally imagined.—Larcher.
he replied, "That the most wicked thing he had ever done was the cutting off the head of his brother, who was caught in a snare in the king's treasury; the most artful thing, was his making the guards drunk, and by that means effecting the removal of his brother's body." On hearing this, she endeavoured to apprehend him, but he, favoured by the night, put out to her the dead arm, which she seizing was thus deluded, whilst he made his escape. On hearing this also, the king was equally astonished at the art and audacity of the man; he was afterwards induced to make a proclamation through the different parts of his dominions, that if the offender would appear before him, he would not only pardon but liberally reward him. The thief, trusting to his word, appeared; Rhampsinitus was delighted with the man, and, thinking his ingenuity beyond all parallel, gave him his daughter. The king conceived the Egyptians superior in subtlety to all the world, but he thought this man superior even to the Egyptians.

CXXII. After this event, they told me that the same king 208 descended alive beneath the earth, to what the Greeks call the infernal regions, where he played at dice with the goddess Ceres,

208 The same king.—The kings of Egypt had many names and titles; these names and titles have been branched out into persons, and inserted in the lists of the real monarchs. I have
Ceres, and alternately won and lost. On his return she presented him with a napkin embroidered with gold. This period of his return was observed by the Egyptians as a solemn festival, and has continued to the time of my remembrance; whether the above, or some other incident,

I have mentioned of Osiris, that he was exposed in an ark, and for a long time in a state of death; the like is said of Orus, Adonis, Thannuz, and Talus, Tulus, or Thoulos. Lastly, it is said of Rhameses, whom Herodotus calls Rhampsinitus, that he descended to the mansions of death, and after some stay returned to light. I mention these things to show that the whole is one and the same history, and that all these names are titles of the same person. They have however been otherwise esteemed, and we find them accordingly inserted in the lists of kings, by which means the chronology of Egypt has been greatly embarrassed.—

Bryant.

209 Ceres.—In the Greek, Demeter. "The Egyptians," says Diodorus Siculus, "rated the earth as the common womb of all things, Meter, which the Greeks, by an easy addition, afterwards altered to Demeter."—T.

210 Alternately won and lost.—Valenciennes informs us in a note, that this circumstance of playing at dice with Ceres, and alternately conquering and being conquered, has been ingeniously explained to mean no more, quàm Ceream almam et faütrecem vel vicissim inimicam experiri, to find agricultural experiments sometimes successful and sometimes otherwise. I think there was probably something also allegorical and mysterious in the story—possibly there might be in this feast something similar to the Eleusinian mysteries; the particular mention of Ceres suggests that opinion.—T.

It should be added that Valenciennes refers the alternate victory and defeat of Rhampsinitus and Ceres to the years of plenty and scarcity under Pharaoh.
incident, was the occasion of this feast, I will not take upon me to determine. The ministers of this solemnity have a vest woven within the space of the day; this is worn by a priest whose eyes are covered with a bandage. They conduct him to the path which leads to the temple of Ceres, and there leave him. They assert, that two wolves meet the priest thus blinded, and lead him to the temple, though at the distance of twenty stadia from the city, and afterwards conduct him back again to the place where they found him.

CXXIII. Every reader must determine for himself with respect to the credibility of what I have related; for my own part I heard these things from the Ægyptians, and think it necessary to transcribe the result of my inquiries. The Ægyptians esteem Ceres and Bacchus as the great deities of the realms below; they are also the first of mankind who have defended the immortality of the soul 211. They believe, that on the

211 Immortality of the soul.—The doctrine of the resurrection was first entertained by the Ægyptians; and their mummies were embalmed, their pyramids were constructed, to preserve the ancient mansion of the soul during a period of three thousand years. But the attempt is partial and unavailing; and it is with a more philosophic spirit that Mahomet relies on the omnipotence of the Creator, whose word can reanimate the breathless clay, and collect the innumerable atoms that no longer retain their form or substance. The intermediate state of the soul it is hard to decide; and those who most firmly believe her immaterial nature
the dissolution of the body the soul immediately enters some other animal, and that, after using as vehicles

nature are at a loss to understand how she can think or act without the agency of the organs of sense.—*Gibbon.*

The Platonic doctrine esteemed the body a kind of prison with respect to the soul. Somewhat similar to this was the opinion of the Marcionites, who called the death of the body the resurrection of the soul.—*T.*

The soul, by reason of its anxiety and impotence, being unable to stand by itself, wanders up and down to seek out consolations, hopes, and foundations, to which she adheres and fixes. But 'tis wonderful to observe how short the most constant and obstinate maintainers of this just and clear persuasion of the immortality of the soul do fall, and how weak their arguments are when they go about to prove it by human reason.—*Montaigne.*

To enumerate the various opinions which have prevailed concerning the soul of man, would be an undertaking alike arduous and unprofitable. Some of the ancients considered it as part of the substance of God; the doctrine of the propagation of souls prevailed, according to Bayle, or rather subsisted, to a very late period of the Christian æra: Averhoes affirmed its mortality, and most of the pagan philosophers believed it to be material; but the arguments for its immortality, which are afforded us in the word of God, at the same time animate our piety and satisfy our reason.—*T.*

What Gibbon says about Mahomet is as artful as it is absurd. He wants his readers to believe that Mahomet was the ingenious author of a regular and well-contrived system; whereas the truth is, that Mahomet had no contrivance or invention whatever; he borrowed every thing, and invented nothing; nor can he at all pretend to any original ideas on the immortality of the soul, the belief of which 'had been received and established many centuries before him.

Bruce observes that the scarabæus was not considered by the Ægyptians as an emblem of the immortality of the soul,
vehicles every species of terrestrial, aquatic, and winged creatures, it finally enters a second time into a human body. They affirm that it undergoes all these changes in the space of three thousand years. This opinion some amongst the Greeks have at different periods of time adopted or its resurrection, "neither of which were at that time in contemplation."

Larcher, who is somewhat too eager on all occasions to censure Bruce, observes on this passage, that it would be easy to prove that the Egyptians always entertained a belief of the soul's immortality.

Bruce's expression is not quite perspicuous; and it may be doubted whether Larcher's translation of it conveys the meaning which the author intended. Larcher renders it, "L'Immortalité n'etoit point encore l'objet des reflexions des hommes."

It is Larcher's opinion, that the doctrine of the soul's immortality degenerated by degrees into that of the transmigration of souls; that the Indians caught this latter opinion; but that Osiris, and Sesostris, who subdued the Indians, brought it back again into Egypt. The learned Frenchman remarks, that the immortality of the soul was from a very early period known to the Greeks, and that the compositions of Homer evidently presume this. According to Cicero, Phercydes of Syros was the first who supported this doctrine.

Phercydes Syrus primus dixit animos esse hominum sempiternos.

212 Some amongst the Greeks.]—He doubtless means to speak of Phercydes of Syros, and Pythagoras.—Larcher.

Phercydes was the disciple of Pittacus, and the master of Pythagoras, and also of Thales the Milesian. He lived in the time of Servius Tullius, and, as Cicero tells us, primum dixit animos hominum esse sempiternos, first taught that the souls of men were immortal. His life is given at some length by Diogenes Laertius.—T.
adopted as their own; but I shall not, though I am able, specify their names.

CXXIV. I was also informed by the same priests, that, till the reign of Rhampsinitus, Ægypt was not only remarkable for its abundance, but for its excellent laws. Cheops, who succeeded this prince, degenerated into the extremest profligacy of conduct. He barred the avenues to every

215 Profligacy of conduct.]—It is not easy to see what could induce M. de Pauw to attempt the vindication of this prince, and to reject as fabulous what Herodotus relates of his despotism, as if this were not the infirmity of these princes, and as if they did not all endeavour to establish it within their dominions. Ægypt enjoyed good laws at the first, they were observed during some ages, and the people were consequently happy; but their princes endeavoured to free themselves from the restraints imposed upon them, and by degrees they succeeded. M. de Voltaire was justified in considering the construction of the pyramids as a proof of the slavery of the Ægyptians; and it is with much justice he remarks, that it would not be possible to compel the English to erect similar masses, who are far more powerful than the Ægyptians at that time were. This is perfectly true, and M. de Pauw, in attacking Voltaire, has wandered from the question. He ought to have proved, that the kings of England were really able to compel their subjects to raise similar monuments, as Herodotus positively asserts of the princes of Ægypt. He ought, I say, to have proved this, and not to have advanced that the cultivation of their lands cost the English nine times more labour than it does in Ægypt; and that their marine in one year occasions the destruction of more people than the construction of all the pyramids would have done in a long series of ages. M. de Pauw would not see that a spirit of ambition,
every temple, and forbad the Egyptians to offer sacrifices; he proceeded next to make them labour servilely for himself. Some he compelled to hew stones in the quarries of the Arabian mountains, and drag them to the banks of the Nile*; others were appointed to receive them in vessels, and transport

a desire of wealth, &c. induce the English eagerly to undertake the most laborious enterprizes; that they are not obliged to do this; and in one word, that it is optional with them; on the contrary, the Egyptians were compelled by their sovereigns to labours the most painful, humiliating, and servile.—Larcher.

* Dr. Shaw does not believe that the stones employed in the pyramids were brought from Arabia. Notwithstanding, says he, the great extravagance and surprizing undertakings of the Egyptian kings, it doth not seem probable that they would have been at the vast labour and expence of bringing materials from so great a distance, when they might have been supplied from the very places where they were to employ them. Now the stone, which makes the bulk and outside of all these pyramids, is of the same nature and texture, hath the like accidents and appearances of spars, fossil shells, cerulean substances, &c. as are common to the mountains of Libya. In like manner Joseph’s Well, the quarries of Irouel near Cairo, the catacombs of Sakara, the Sphinx, and the chambers that are cut out of the natural rock on the East and West side of these pyramids, do all of them discover the specific marks and characteristics of the pyramidal stones, and, as far as I could perceive, were not to be distinguished from them. The pyramidal stones, therefore, were in all probability taken from this neighbourhood; nay, perhaps they were those very stones that had been dug away to give the Sphinx and the chambers their proper views and elevations. Shaw, p. 416.
transport them to a mountain of Libya. For this service an hundred thousand men were employed, who were relieved every three months. Ten years were consumed in the hard labour of forming the road, through which these stones were to be drawn; a work, in my estimation, of no less fatigue and difficulty than the pyramid itself. This causeway is five stadia in length, forty

214 The pyramid itself.]—For the satisfaction of the English reader, I shall in few words enumerate the different uses for which the learned have supposed the pyramids to have been erected. Some have imagined that, by the hieroglyphics inscribed on their external surface, the Egyptians wished to convey to the remotest posterity their national history, as well as their improvements in science and the arts. This, however ingenious, seems but little probable; for the ingenuity which was equal to contrive, and the industry which persevered to execute, structures like the pyramids, could not but foresee that, however the buildings themselves might from their solidity and form defy the effects of time, the outward surface, in such a situation and climate, could not be proportionably permanent; add to this, that the hieroglyphics were a sacred language, and, obscure in themselves, and revealed but to a select number, might to posterity afford opportunity of ingenious conjecture, but were a very inadequate vehicle of historical facts.

Others have believed the pyramids intended merely as observatories to extend philosophic and astronomical knowledge; but in defence of this opinion little can be said: the adjacent country is a flat and even surface; buildings, therefore, of such a height, were both absurd and unnecessary; besides that, for such a purpose, it would have been very preposterous to have constructed such a number of costly and massy piles, differing so little in altitude.

215 For this note, see page 43.
forty cubits wide, and its extreme height thirty-two cubits, the whole is of polished marble, adorned

To this may be added, that it does not appear, from an examination of the pyramids, that access to the summit was ever practicable, during their perfect state.

By some they have been considered as repositories for corn, erected by Joseph, and called the granaries of Pharaoh. The argument against this is very convincing, and is afforded us by Pliny. "In the building of the largest of the pyramids, 366,000 men," says he, "were employed twenty years together." This, therefore, will be found but ill to correspond with the Scriptural history of Joseph. The years of plenty which he foretold were only seven; which fact is of itself a sufficient answer to the above.

It remains, therefore, to mention the more popular and the more probable opinion, which is, that they were intended for the sepulchres of the Egyptian monarchs.

Instead of useful works, like nature, great,
Enormous cruel wonders crush'd the land,
And round a tyrant's tomb, who none deserv'd,
For one vile carcass perish'd countless lives.—Thomson.

When we consider the religious prejudices of the Egyptians, their opinion concerning the soul, the pride, the despotism, and the magnificence of their ancient princes, together with the modern discoveries with respect to the interior of these enormous piles, there seems to remain but little occasion for argument, or reason for doubt.

The following is from Mr. Wilford, Asiatic Res. vol. iii. p. 439.

On my describing the great Egyptian pyramid to several very learned Brahmins, they declared it at once to have been a temple; and one of them asked if it had not a communication under ground with the river Cali (Nile); when I answered that such a passage was mentioned as having existed, and that a well was at this day to be seen; they unanimously
adorned with the figures of animals. Ten years, as I remarked, were exhausted in forming this causeway,

...
causeway, not to mention the time employed in the vaults \(^{16}\) of the hill \(^{17}\) upon which the pyramids are erected. These he intended as a place of burial for himself, and were in an island which he formed by introducing the waters of the Nile.\(^*\)

The

\(^{16}\) Vaults.]

\(^{17}\) The hill.]

\(^*\) No writer or traveller has made any mention of this canal, which is again spoken of in chapter 127; not even Diodorus Siculus. See Grobert, p. 25.
The pyramid itself was a work of twenty years: it is of a square form; every front is eight plethra\(^2\) long, and as many in height; the stones very

To me it seems evident that Greaves and Niebuhr are prodigiously deceived in the perpendicular height of the great pyramid. All travellers agree it contains at least two hundred and seven layers, which layers are from four to two feet high. The highest are at the base, and they decrease insensibly to the top. I measured several, which were more than
very skilfully cemented, and none of them of less dimensions than thirty feet.

CXXV. The ascent of the pyramid was regularly graduated by what some call steps, and others altars*. Having finished the first flight, they

than three feet high, and I found none that were less than two; therefore the least mean height that can be allowed them is two feet and a half, which, according to the calculation of Greaves himself, who counted two hundred and seven, will give five hundred and seventeen feet six inches in perpendicular height.—Savary.

See the conclusion of this book for farther remarks on the pyramids.

* Shaw takes occasion from this passage to intimate his opinion that the original design of the pyramids never was completed.

"Neither does it appear that either this or any other of the three greater pyramids was ever finished. For the stones in the entrance into the greatest being placed archwise, and at a greater height than seems necessary for so small a passage; there being also a large space left on each side of it, by discontinuing several of the parallel rows of steps, which, in other places, run quite round the pyramid; these circumstances, I say, in the architecture of this building, seem to point out to us some further design, and that originally there might have been intended a large and magnificent portico. Neither were the steps, or little altars, as Herodotus calls them, to remain in the same condition they have been in from the earliest records of Time: for these were all of them to be filled up in such a manner with prismatical stones, that each side of the pyramid, as in that of Cestius, at Rome, was to be smooth and upon a plane. Now nothing of this kind appears to have been ever attempted in the lesser or greater of these pyramids (the latter of which wants likewise a great part
they elevated the stones to the second by the aid of machines \(^{219}\) constructed of short pieces of wood; from the second, by a similar engine, they were

part of the point, where this filling up was most probably to commence); but in the second, commonly called *Chephren's pyramids*, which may hint to us what was intended in them all, we see near a quarter of the whole pile very beautifully filled up, and ending at the top like the point of a diamond. These stones, agreeable perhaps to the depth of the strata from whence they were hewn, are from five to thirty feet long, and from three to four feet high. Yet notwithstanding the weight and massiveness of the greatest part of them, they have all been laid in mortar, which at present is easily crumbled to powder, though originally perhaps it might be of greater tenacity, as the composition of it seems to be the same with that of Barbary."

\(^{219}\) Aid of machines.\)—Mr. Greaves thinks that this account of Herodotus is full of difficulty. "How, in erecting and placing so many machines, charged with such massy stones, and those continually passing over the lower degrees, could it be avoided, but that they must either unsettle them, or endanger the breaking of some portions of them? Which mutilations would have been like scars in the face of so magnificent a building."

I own that I am of a different opinion from Mr. Greaves; for such massy stones as Herodotus has described would not be discomposed by an engine resting upon them, and which, by the account of Herodotus, I take to be only the pulley. The account that Diodorus gives of raising the stones by imaginary \(\kappa\omega\mu\delta\alpha\tau\nu\) (heaps of earth) engines not being then, as he supposes, invented, is too absurd to take notice of. And the description that Herodotus has given, notwithstanding all the objections that have been raised to it, and which have arisen principally from misrepresenting him, appears to me very clear and sensible.—Dr. Templeman's Notes to Norden.
were raised to the third, and so on to the summit. Thus there were as many machines as there were regular divisions in the ascent of the pyramid, though in fact there might only be one, which, being easily manageable, might be removed from one range of the building to another, as often as occasion made it necessary: both modes have been told me, and I know not which best deserves credit. The summit of the pyramid was first of all finished; descending thence, they regularly completed the whole. Upon the outside were inscribed, in Ægyptian characters, the various sums of money expended, in the progress of the work, for the radishes, onions, and garlic

210 First of all finished.]—The word in the text is έξιεινδην, which Larcher has rendered, "On commença revetir et perfectionner."

Great doubts have arisen amongst travellers and the learned, whether the pyramid was coated or not. Pliny tells us, that at Busiris lived people who had the agility to mount to the top of the pyramid. If it was graduated by steps, little agility would be requisite to do this; if regularly coated it is hard to conceive how any agility could accomplish it.

Norden says, that there is not the least mark to be perceived to prove that the pyramid has been coated by marble.

Savary is of a contrary opinion: "That it was coated," says he, "is an incontestable fact, proved by the remains of mortar, still found in several parts of the steps, mixed with fragments of white marble." Upon the whole, it seems more reasonable to conclude that it was coated.—T.

221 Ægyptian characters.]—Probably in common characters, and not in hieroglyphics.—Larcher.
garlic consumed by the artificers. This, as I well remember, my interpreter informed me, amounted to no less a sum than one thousand six hundred talents. If this be true, how much more must it have necessarily cost for iron tools, food, and clothes for the workmen, particularly when we consider the length of time they were employed on the building itself, adding what was spent in the hewing and conveyance of the stones, and the construction of the subterraneous apartments?

CXXVI. Cheops having exhausted his wealth, was so flagitious, that he prostituted his daughter222, commanding her to make the most of her person. She complied with her father's injunctions, but I was not told what sum she thus procured, at the same time she took care to perpetuate the memory of herself; with which view she solicited every one of her lovers to present her with a stone. With these it is reported the middle of the three pyramids223, fronting the larger one, was

222 Prostituted his daughter.]—This account of the king's prostituting his daughter has been thought so full of horror, that many have doubted the truth of it; but we have had in our own country an instance of as detestable a crime in a husband's prostituting his wife merely from an unnatural passion.—See State Trials, the Case of Mervin Lord Audley.

223 The middle of the three pyramids.]—The acts of magnificence which the courtesans of antiquity were enabled to accomplish from the produce of their charms, almost exceed belief.
was constructed, the elevation of which on each side is one hundred and fifty feet.

CXXVII. According to the Egyptians, this Cheops reigned fifty years. His brother Chephren, succeeded to his throne, and adopted a similar conduct. He also built a pyramid, but this was less than his brother's, for I measured them both; it has no subterraneous chambers, nor any channel for the admission of the Nile, which in the other pyramid surrounds an island, where the body of Cheops is said to be deposited.

Of this latter pyramid, the first ascent is entirely of belief. It is told of Lamia, the charming mistress of Demetrius Poliorcetes, that she erected at Sicyon a portico, so beautiful and superb, that an author named Polemo wrote a book to describe it.—See Athenaeus, and the Letters of Alciphron.—T.

224 His brother Chephren.]—Diodorus Siculus remarks, that some authors are of opinion, that it was not his brother who succeeded him, but his son Chabryis, or Chabryen. Probably, says M. Larcher, the same word differently written.

225 Is said to be deposited.]—The kings designed these pyramids for their sepulchres, yet it happened that their remains were not here deposited. The people were so exasperated against them, by the severe labours they had been compelled to endure, and were so enraged at the oppressive cruelty of their princes, that they threatened to take their bodies from their tombs, and cast them to the dogs. Both of them, therefore, when dying, ordered their relations to bury them in some secret place.—Diodorus Siculus.
of Æthiopian marble* of divers colours, but it is not so high as the larger pyramid, near which it stands, by forty feet. This Chephren reigned fifty-six years; the pyramid he built stands on the same hill with that erected by his brother: the hill itself is near one hundred feet high†.

CXXVIII. Thus for the space of one hundred and six years the Ægyptians were exposed to every species of oppression and calamity, not having in all this period, permission to worship in their temples. They have so extreme an aversion for the memory of these two monarchs, that they are not very willing to mention their names. They call their pyramids by the name

---

* Larcher thinks this was the stone which Pliny calls pyropoecilos, that is granite, and might, the learned Frenchman is of opinion, be brought from Syene, which being on the borders of Æthiopia, might, in less accurate language, be termed Æthiopia itself.

† Herodote accuse 100 pieds environ pour l'élevation du rocher. M. Norden, c. 3. Mais aucun de ces auteurs n'indique le point duquel il est parti pour appercier cette hauteur. Le défaut d'évaluer à l'œil des dimensions dont la vérification était difficile, paraît avoir été de tous les tems: c'est, a mon avis un des motifs des contradictions que l'on rencontre dans différens ouvrages. Jai cru que le niveau des eaux indiquant le point le plus bas, il fallait niveler depuis le canal jusqu'au bas de l'arreté N. E. du Cheops.—Grobert.

*226 Mention their names.—Part of the punishment annexed in France to high-treason, and other enormous offences, was the irrevocable extinction of the family name of the convicted persons..
of the shepherd Philitis, who at that time fed his cattle in those places.

This is probably the reason, observes M. Larcher, why historians are so much divided in opinion concerning the names of the princes who erected the pyramids.

This seems a proper place to do an act of justice to our countryman Shaw.

In his remarks on this passage of Herodotus, Shaw says, Herodotus indeed, who has preserved these reports, doth not give much credit to them, which his French translator has thus ignorantly rendered:—"Il faut avouer cependant que Herodote qui nous a transmis tous ces beaux contes ne merite pas d'être cru a cet regard." Shaw says no such thing; he is, however, evidently mistaken, when he says that of the two great pyramids, Cheops erected the first, and the daughter of Cheops the second. According to Herodotus, Cheops constructed the first, Chephren the second, and Mycerinus the third. That which the daughter of Cheops built was opposite to the first and largest, and in the middle between the two others.

227 Philitis.—Some of the pyramids in Egypt were styled the pyramids of the shepherd Philitis, and were said to have been built by people whom the Egyptians held in abomination; from whence we may form a judgment of the persons by whom these edifices were erected. Many hills and places of reputed sanctity were denominated from shepherds. Caucasus, in the vicinity of Colchis, had its name conferred by Jupiter, in memory of Caucasus, a shepherd. Mount Cithæron, in Bœotia, was called Asterius, but received the former name from one Cithæron, a shepherd, supposed to have been there slain.—Bryant.

The shepherds alluded to were probably the Israelites. See some acute remarks on the superstitious and ignorance of the ancient Egyptians in the time of Herodotus, in Gifford's excellent translation of Juvenal, p. 471, 2, 3.

Qui de iis scripserunt, says Pliny, speaking of the pyramids, sunt Herodotus, Euhemerus, Duris Samius, Aristagoras, Dionysius, Artemidorus, Alexander Polyhistor, Buto-
CXXIX. Mycerinus, the son of Cheops, succeeded Chephren: as he evidently disapproved of his father's conduct, he commanded the temples to be opened, and the people, who had been reduced to the extremest affliction, were again permitted to offer sacrifice, at the shrines of their gods. He excelled all that went before him, in his administration of justice. The Egyptians revere his memory beyond that of all his predecessors, not only for the equity of his decisions, but because, if complaint was ever made of his conduct as a judge, he condescended to remove and redress the injury. Whilst Mycerinus thus distinguished himself by his exemplary conduct to his subjects, he lost his daughter and only child, the first misfortune he experienced. Her death excessively afflicted him; and wishing to honour her funeral with more than ordinary splendour, he enclosed her body in

rides, Antisthenes, Demetrius, Demeteles, Apion. Inter eos omnes non constat a quibus facta sint, justissimo casu oblitaris tantè vanitatis auctoris.

228 Equity of his decisions.]—It appears, as well from this paragraph as the remainder of the chapter, that the kings administered justice to their subjects in person. It is not, therefore, very easy to see what could induce M. Pauw to assert that the sovereigns of Egypt had not the power of deciding in any civil cause.—Larcher.

229 Redress the injury.]—Diodorus Siculus relates the same fact; and says, that he expended large sums of money in making compensation to such as he thought injured by judicial decisions.—T.
in an heifer \(^230\) made of wood, and richly ornamented with gold \(^231\).

\(^{230}\) *In an heifer.*—The Patrica were not only rites of Mithres, but also of Osiris, who was in reality the same deity. We have a curious inscription to this purpose, and a representation which was first exhibited by the learned John Price, in his observations upon Apulcus. It is copied from an original which he saw at Venice, and there is an engraving from it in the edition of Herodotus by Gronovius, as well as in that by Wesseling, but about the purport of it they are strangely mistaken. They suppose it to relate to a daughter of Mycerinus, the son of Cheops. She died, it seems, and her father was so affected with her death, that he made a bull of wood, which he gilt, and in it interred his daughter. Herodotus says that he saw the bull of Mycerinus, and that it alluded to this history. But notwithstanding the authority of this great author, we may be assured, that it was an emblematical representation, and an image of the sacred bull, Apis and Mnevis.—Bryant.

Larcher is very severe on Mr. Bryant for his mistake about the print abovementioned. But after all there is nothing but the cow, the cloth over her, and the incense burning before her, that has the smallest reference to the story of the daughter of Mycerinus; nor is it easy to see how the inscription can be applied to it. If it represents an Egyptian ceremony, it is more natural to assign it to that of the month Athyr, mentioned by Plutarch. How Larcher found out that this print represents a cow, and not a bull, does not appear.

Besides all this, Herodotus does not say that he saw either bull or heifer. He says, indeed, that it remained to his time, but that he relates only what he was told.

\(^{231}\) *Gold.*—The prophet Isaiah threatening the people of Israel for their blind confidence in Egypt, says, "Ye shall defile also the covering of thy graven images of silver, and the ornaments of thy molten images of gold." Winkelmann, speaking of the antiquity of art in Egypt, says, "Les figures taillées originairement en bois, et les statues jetées en fonte, ont toutes leur denomination particulière dans la langue Hebraïque: par la suite des temps les premières furent dorées ou revêtues de lames d'or."—T.
CXXX. This heifer was not buried; it remained even to my time, in the palace of Sais, placed in a superb hall. Every day, costly aromatics were burnt before it, and every night it was splendidly illuminated; in an adjoining apartment are deposited statues of the different concubines of Mycerinus, as the priests of Sais informed me. These are to the number of twenty, they are colossal figures, made of wood, and in a naked state, but what women they are intended to represent, I presume not to say: I merely relate what I was told.

CXXXI. Of this heifer, and these colossal figures, there are some who speak thus: Mycerinus, they say, conceived an unnatural passion for his daughter, and offered violence to her person. She having, in the anguish of her mind, strangled herself, her father buried her in the manner we have described. The mother cut off the hands of those female attendants, who assisted the king in his designs upon his daughter, and therefore these figures are marked by the same imperfections, as distinguished the persons they represent, when alive. The whole of this story\(^{23}\), and that in particular which relates to the

---

\(^{23}\): The whole of this story.\]—In the old version of Herodotus before quoted, this passage is rendered thus: "But this is as true as the man in the moone, for that a man with halfe
the hands of these figures, to me seems very preposterous. I myself saw the hands lying on the ground, merely, as I thought, from the effect of time.

CXXXII. The body of this heifer is covered with a purple cloth\footnote{With a purple cloth.}, whilst the head and neck are very richly gilt: betwixt the horns there is a golden star; it is made to recline on its knees, and is about the size of a large cow. Every year it is brought from its apartment; at the period when the Ægyptians flagellate themselves in honour of a certain god, whom it does not become me to name, this heifer is produced to the light: it was the request, they say, of the dying princess to her father, that she might once every year behold the sun.

CXXXIII. Mycerinus after the loss of his daughter, met with a second calamity; an oracle from the city Butos informed him that he should live halfe an eye may clearly perceive that their hands fel off for very age, by reason that the wood, through long continuance of time, was spaked and perished."—Herodotus his second Booke entituled Euterpe.

\footnote{With a purple cloth.}—"The Ægyptians," says Plutarch, "have a custom in the month Athyr, of ornamenting a golden image of a bull, which they cover with a black robe of the finest linen. This they do in commemoration of Isis, and her grief for the loss of Orus."
live six years, but die in the seventh; the intelligence astonished him, and he sent a message in return to reproach the goddess\(^{234}\) with injustice; for that his father and his uncle, who had been injurious to mankind, and impious to the gods, had enjoyed each a length of life of which he was to be deprived, who was distinguished for his piety. The reply of the oracle told him, that his early death\(^*\) was the consequence of the conduct for which he commended himself; he had not fulfilled the purpose of the fates, who had decreed that for the space of one hundred and fifty years \AE{}gypt should be oppressed; of which determination the two preceding monarchs had been aware, but he had not. As soon as Mycerinus knew that his destiny was immutable, he caused an immense number of lamps to be made, by the light of which, when evening approached, he passed his hours in the festivity of the banquet\(^{235}\); he frequented by day and by night the groves and streams, and whatever places he thought productive of delight: by this method of changing night

\(^{234}\) To reproach the goddess.\)—Instead of \(\tau\nu\ \Theta\iota\omega\) Valcnær proposes to read \(\tau\nu\ \Theta\iota\omega\): "No god," says he, "had an oracle at Butos, but the goddess called by the Greeks Latona, the nurse of Apollo the son of Isis, who had an oracle at Butos held in the highest estimation."—T.

\(^*\) He could not be very young; he was probably born some years before the death of his aged parent, and that was fifty-seven years before he began to reign.

\(^{235}\) Of the banquet.\)—\textit{\AE}lian records many examples similar to this of Mycerinus, in his \textit{Various History}, book ii. chap. 41.
into day, and apparently multiplying his six years into twelve, he thought to convict the oracle of falsehood.

CXXXIV. This prince also built a pyramid, but it was not by twenty feet so high as his father's; it was a regular square on every side, three hundred feet in height, and as far as the middle of Aethiopian stone. Some of the Greeks erroneously believe this to have been erected

* This pyramid of Mycerinus, as well as that of Chephren, could not possibly be built for sepulchres. It is evident that no passage was left to enter them, which was not the case with the great pyramid; and there is no tradition when they were erected by pious successors over the tombs of their ancestors.

236 Built a pyramid.]—" If," says Diodorus Siculus, speaking of this pyramid, "it is less in size and extent than the others, it is superior to them in the costliness of the materials, and excellence of the workmanship."—T.

To the East of it is the third pyramid, said to be built by Mycerinus. Herodotus speaks of it as three hundred feet square. I measured it at the top, fourteen feet on the North side, and twelve on the East, and counting seventy-eight steps, at one foot nine inches broad, it amounts to about the number of feet. Our author affirms that it was built half way up with Aethiopian marble, that is cased with it. Diodorus mentions fifteen tier, so that computing each tier on the outside to be five feet deep, as I found them, that will amount to seventy-five feet, which answers within six feet of the height, computed at one hundred and fifty-six feet, supposing the steps to be two feet high. On this account Strabo says it was as expensive a work as the others. All round it are remains of the granite it was adorned with, which has been pulled down, and great part of it carried away.—Pococke, v. i. p. 47.
erected by Rhodopis the courtesan, but they do not seem to me even to know who this Rhodopis was; if they had, they never could have ascribed to her the building of a pyramid, produced at the expense of several thousand talents: besides this, Rhodopis lived at a different

* Yet Herodotus tells a similar story of the daughter of Cheops.

Rhodopis.—The following account of this Rhodopis is from Strabo.

It is said that this pyramid was erected by the lovers of Rhodopis, by Sappho called Doricha: she was the mistress of her brother Charaxus, who carried to Naucratis, Lesbian wine, in which article he dealt; others call her Rhodope. It is reported of her, that one day when she was in the bath, an eagle snatched one of her slippers from an attendant, and carried it to Memphis. The king was then sitting in his tribunal; the eagle, settling above his head, let fall the slipper into his bosom: the prince, astonished at this singular event, and at the smallness of the slipper, ordered a search to be made through the country for the female to whom it belonged. Having found her at Naucratis, she was presented to the king, who made her his wife: when she died she was buried in the manner we have described.

Diodorus Siculus says, that this pyramid was believed to have been erected to the memory of Rhodopis, at the expense of some governors who had been her admirers.

Perizonius, in his notes on Aelian, says, that there were two of this name; one a courtesan, who afterwards became the wife of Psammitichus; the other the fellow-slave of Æsop, who lived in the time of Amasis; but Larcher satisfactorily shews that Perizonius was mistaken.—T.

Several thousand talents.—Demetrius Poliorcetes compelled the Athenians to raise for him immediately the sum of two hundred and fifty talents, which he sent to his mistress Lamia,
ferent period, in the time, not of Mycerinus, but Amasis, and many years after the monarchs who erected the pyramids. Rhodopis was born in Thrace, the slave of Iadmon, the son of Hephaestopolis the Samian: she was the fellow-servant of Aesop, who wrote fables, and was also the Lamia, saying it was for soap. When I inform the reader that she spent this immense sum in a feast given to her lord, what is here related of Rhodopis may seem less incredible.—T.

239 Aesop, who wrote fables.—This name is so familiar, that it may at first sight seem superfluous and inconsistent to say any thing on the subject; but possibly every English reader may not know, that the fables which go under his name were certainly not of his composition; indeed but little concerning him can be ascertained as fact. Plutarch assures us, that Croesus sent Aesop to the oracle of Delphi; that Aesop and Solon were together at the court of Croesus; that the inhabitants of Delphi put him to death, and afterwards made atonement to his memory: and finally, that Socrates versified his fables. Plato, who would not admit Homer into his commonwealth, gave Aesop an honourable place in them, at least such is the expression of Fontaine.

It remains to do away one absurd and vulgar prejudice concerning him. Modern painters and artists have often thought proper to represent Bacchus as a gross, vulgar, and bloated personage; on the contrary, all the ancient poets and artists represented him as a youth of most exquisite beauty. A similar error has prevailed with respect to Aesop; that it is an error, Bentley's reasoning must satisfactorily prove to whoever gives it the attention which it merits. "In Plato's feast," says he, "they are very merry upon Socrates' face, which resembled old Silenus. Aesop was one of the guests, but nobody presumes to jest on his ugliness." Philostratus has given, in two books, a description of
the slave of Iadmon; all which may be thus easily proved: The Delphians, in compliance with the directions of the oracle, had desired publicly to know, if any one required atonement to be made for the death of Æsop; but none appeared to do this, except a grandson of Iadmon, bearing the same name.

CXXXV. Rhodopis was first carried to Egypt by Xanthus of Samos, whose view was to make money

of a gallery of pictures; one is Æsop, with a chorus of animals about him; he is painted smiling and looking thoughtfully on the ground, but not a word on his deformity: the Athenians erected a statue in his honour. See Phædrus's Fab. I. 11.

Æsopo ingentem statuam posuere Attici
Servumque collocarunt aeterna in vasi
Patere honoris seirent ut cunctis viam
Nec generi tribui sed virtuti gloriem.

If he had been deformed, continues Bentley, a statue had been no more than a monument of his ugliness, it would have been kinder to his memory to have let it alone. But after all, the strongest argument to prove that he was not of a disagreeable form, is that he must have been sold into Samos by a trader in slaves. It is well known that these people bought up the most handsome youths they could procure. If we may judge of him from his companion and contubernalis, we must believe him a comely person. Rhodopis was the greatest beauty of her age, even to a proverb—

παυζα ὑπόνια ἔρωτις ἡ καλὴ.

The compilers of the Encyclopædia Britannica have given into the vulgar error, and scruple not to pronounce Æsop a person of striking deformity.—T.
money by her person. Her liberty was purchased for an immense sum by Charaxus of Mytilene, son of Scamandronymus, and brother of Sappho the poetess: thus becoming free, she afterwards continued in Egypt, where her beauty procured her considerable wealth, though by no means adequate to the construction of such a pyramid; the tenth part of her riches, whoever pleases may even now ascertain, and they will not be found so great as has been represented. Wishing to perpetuate her name in Greece, she contrived what had never before been imagined, as an offering for the Delphic temple: she ordered a tenth part of her property to be expended in making a number of iron spits, each large enough to roast an ox; they were sent to Delphi, where

---

340 Charaxus.]—Sappho had two other brothers, Eurygius and Larychus, or rather Larichus, as it is written in Athenæus, the Dorians being partial to terminations in ichos.—Larcher.

Athenæus asserts, that the courtesan of Naucratis, beloved by Charaxus, and satirised by Sappho, was called Dorica. The same author adds, that Herodotus calls her Rhodopis from ignorance; but the opinion of Herodotus is confirmed by Strabo.—Larcher.

See Athenæus, l. 12, c. 7.

Naucratis produced many celebrated courtesans, and of great beauty. Among these was Dorica, whom Sappho reproaches in some satirical verses, because being beloved by Charaxus, her brother, who had visited Naucratis on some commercial business, she extorted a great deal of money from him.
they are now to be seen behind the altar presented by the Chians. The courtesans of Naucratis are generally beautiful; she of whom we speak, was so universally celebrated that her name is familiar to every Greek. There was also another courtesan, named Archidice, well known in Greece, though of less repute than Rhodopis.

241 Where they are now to be seen.—They were not to be seen in the time of Plutarch; in his tract assigning the reasons why the Pythian ceased to deliver her oracles in verse, Brasidias, whose office it was to shew the curiosities of the place, points out the place where they formerly stood.—T.

242 The courtesans of Naucratis.—"Howbeit such arrant honest women as are fishe for everye man, have in no place the like credite as in the city of Naucrates. Forsomuch as this stalant of whom we speake, had her fame so bruted in all places, as almost there was none in Greece that had not heard of the fame of Rhodope; after whome there sprang up also another as good as ever ambled, by name Archidice, &c."—Herodotus his second booke, entituled Euterpe.

243 Archidice.—Of this courtesan the following anecdote is related by Αelian: She demanded a great sum of money of a young man who loved her; the bargain broke off, and the lover withdrew re infectá: he dreamed in the night that he lay with the woman, which cured his passion. Archidice, on learning this, pretended that the young man ought to pay her, and summoned him before the judges: the judge ordered the man to put the sum of money required, into a purse, and to move it so that its shadow might fall on Archidice; his meaning was, that the young man's pleasure was but the shadow of a real one. The celebrated Lamia condemned this decision as unjust; the shadow of the purse, she observed, had not cured the courtesan's passion for the money, whereas the dream had cured the young man's passion for the woman.
Rhodopis. Charaxus, after giving Rhodopis her liberty, returned to Mytilene, this woman was severely handled by Sappho in some satirical verses:—but enough has been said on the subject of Rhodopis.

CXXXVI. After Mycerinus, as the priests informed me, Asychis reigned in Ægypt; he erected the east entrance to the temple of Vulcan, which is far the greatest and most magnificent. Each of the above-mentioned vestibules is elegantly adorned with figures well carved, and other ornaments of buildings, but this is superior to them all. In this reign, when commerce was checked and injured from the extreme want of money, an ordinance passed, that any one might borrow money, giving the body of his father as a pledge: by this law the sepulchre of the debtor became in the power of the creditor; for if the debt was not discharged he could neither be buried with his family, nor in any other vault, nor was he suffered to inter one of his descendants*. This prince, desirous of surpassing all his predecessors, left as a monument of his fame a pyramid of brick, with this inscription on a piece of marble.—" Do not disparage my

* The laws of England allow the arrest of a person's dead body till his debts are paid; this mentioned by Herodotus is the first example perhaps on record of such a custom.
"my worth by comparing me to those pyramids
"composed of stone; I am as much superior to
"them, as Jove is to the rest of the deities; I
"am formed of bricks\[^{245}\], which were made of
"mud adhering to poles drawn from the bottom
"of the lake."—This was the most memorable
of this king's actions.

CXXXVII. He was succeeded by an inhabitant of Anysis, whose name was Anysis, and

\[^{245}\] Formed of bricks.—Mr. Greaves asserts, that all the
pyramids were made of stone, of course he did not penetrate far enough into \(\text{Egypt}\) to see the one here mentioned; it is situated about four leagues from Cairo, and is noticed both by Norden and Pococke.—T.

As to what concerns the works on which the Israelites were employed in \(\text{Egypt}\), I admit that I have not been able to find any ruins of bricks burnt in the fire. There is indeed a wall of that kind which is sunk very deep in the ground, and is very long, near to the pyramids, and adjoining to the bridges of the Saracens, that are situated in the plain; but it appears too modern to think that the bricks of which it is formed were made by the Israelites. All that I have seen elsewhere of brick building, is composed of the large kind of bricks hardened in the sun, such as those of the brick pyramid.—Norden.

The nature of the bricks made by the Israelites may be easily understood; they were unburnt bricks, of which straw made a part of the composition. Such have been seen from Ancient Babylon; one of this description is preserved in the British Museum. They are every where to be seen in hot climates. Such could not be burnt without consuming the straw, which would involve an absurdity.

The brick in the British Museum, brought from the site of ancient Babylon, is evidently sun-dried. It is of a friable nature, and pieces of broken reeds are clearly to be seen.

Vol. II, F who
who was blind. In his reign, Sabacus \(^{246}\) king of Æthiopia overran Ægypt with a numerous army; Anysis fled to the morasses, and saved his life; but Sabacus continued master of Ægypt for the space of fifty years. Whilst he retained his authority, he made it a rule not to punish any crime with death, but according to the magnitude of the offence he condemned the criminal to raise the ground near the place to which he belonged; by which means the situation of the different cities became more and more elevated: they were somewhat raised under the reign of Sesostris by the digging of the canals, but they became still more so under the reign of the Æthiopian. This was the case with all the cities of Ægypt, but more particularly with the city of Bubastis\(^{*}\). There is in this city a temple, which well

\(^{246}\) Sabacus.\(^{*}\)—This event happened in the beginning of the reign of Hezekiah. Prideaux, on the authority of Syn-cellus, says he took Bocchoris, and burnt him alive; but it is more generally believed that Bocchoris was anterior to Sabacus; this last is the person mentioned in the book of Kings, by the name of So.–\(T\).

\(^{*}\) Bubastis.\(^{*}\)—The reader will do well to consult the French Memoires sur L'Ægypte, (vol. i. p. 215, et seq.) for the description of the ruins of the Temple of Bubastis, or Bastus, now called in the Vernacular tongue, Thal Baslah. It is wonderful how very minutely the description given by the French travellers corresponds with this of Herodotus, exhibiting another most striking instance of his veracity and accuracy. The ruins of the temple are of granite, and form, as the French writer expresses himself, a school of Ægyptian architecture. The position of Bubastis being found, gives
well deserves our attention; there may be others larger as well as more splendid, but none which have a more delightful situation. Bubastis in Greek is synonymous with Artemis or Diana.\footnote{Artemis or Diana.}—Bubastis was a virgin, presided at childbirths, and was the symbol of the moon. This resemblance with their Diana caused the Greeks to name her the Diana of the Egyptians: yet the similitude was far from perfect, for with the latter she was not the goddess of the mountains, the woods, and the chase.

us a point in the course of the old Pelusiac branch of the Nile, and this has been expressed by Major Reniel in the corrected map of Egypt, which by his kind permission accompanies this work.
shades the temple, in the centre of which is the statue of the goddess: the length and breadth of the temple each way, is one stadium. There is a paved way which leads through the public square of the city, from the entrance of this temple to that of Mercury\textsuperscript{243}, which is about thirty stadia in length.

\textsuperscript{243} \textit{Mercury.}—The \textit{Æ}gyptian Mercury was named Thoth or Theuth. Thoth with the \textit{Æ}gyptians was the inventor of the sciences; and as Mercury with the Greeks presided over the sciences, this last people called Thoth in their tongue by the name of Hermes or Mercury: they had also given the name of Mercury to Anubis, on account of some fancied similitude betwixt those deities. "It is not," says Plutarch, "a dog properly so called, which they revere under the name of Mercury, it is his vigilance and fidelity, the instinct which teaches him to distinguish a friend from an enemy, that which (to use the expression of Plato) makes this animal a suitable emblem to the god, the immediate patron of reason."

Servius on Virgil has a remark to the same effect.—La\textit{archer.}

This deity also with the Romans was esteemed the patron of arts, and the protector of learned men. See the ode addressed to him by Horace, beginning with

\begin{verbatim}
Mercuri, (nam te docilis magistro
Movit Amphion lapides canendo,)
Tuque testudo, resonare septem
Callida nervis, &c.
\end{verbatim}

Where he is not only represented as the patron, but the teacher of music. Learned men also were called \textit{Viri Mercuriales}.

\begin{verbatim}
Nisi Faunus ictum
Dextra levasset, Mercurialium
Custos virorum.—\textit{Horace.}
\end{verbatim}

\textit{T}.
CXXXIX. The deliverance of Egypt from the Ethiopian was, as they told me, effected by a vision, which induced him to leave the country: a person appeared to him in a dream, advising him to assemble all the priests of Egypt, and afterwards cut them in pieces. This vision to him seemed to demonstrate, that in consequence of some act of impiety, which he was thus tempted to perpetrate, his ruin was at hand, from Heaven or from man. Determined not to do this deed, he conceived it more prudent to withdraw himself; particularly as the time of his reigning over Egypt was, according to the declarations of the oracles, now to terminate. During his former residence in Ethiopia, the oracles of his country had told him, that he should reign fifty years over Egypt: this period being accomplished, he was so terrified by the vision, that he voluntarily withdrew himself.

CXL. Immediately on his departure from Egypt, the blind prince quitted his place of refuge, and resumed the government: he had resided

---

249 The oracles of his country.]—The oracles in Ethiopia were the oracles of Jupiter.—T.

250 On his departure.]—Diodorus Siculus says, that after the departure of Sabacus there was an anarchy of two years, which was succeeded by the reign of twelve kings, who at their joint expense constructed the labyrinth.
sided for the period of fifty years in a solitary island, which he himself had formed of ashes and of earth. He directed those Ægyptians who frequented his neighbourhood for the purpose of disposing of their corn, to bring with them, unknown to their Æthiopian master, ashes for his use. Amyrtaeus was the first person who discovered this island, which all the princes who reigned during the space of five hundred years before Amyrtaeus, were unable to do: it is called Elbo *, and is on each side ten stadia in length.

CXLI. The successor of this prince was Sethos, a priest of Vulcan; he treated the military of Ægypt

251 Five hundred years.—M. Larcher says that the term of seven hundred is a mistake, and crept into the manuscript of Herodotus from a confusion of the numeral letters by copyists. The remark is as old as Perizonius, and accounted for by Bouhier. I have accordingly, on their joint authority, altered the reading from seven to five hundred, which indeed is also more consistent with probability.

* The El in this word, as well as in others which occur, seems to indicate that these were Arabic names, and that the El is the article.

252 Priest of Vulcan.—The following account is given by M. Larcher, from Plato, Plutarch, and Diodorus Siculus.

A prince cannot reign in Ægypt if he be ignorant of sacred affairs. If an individual of any other class comes accidentally to the crown, he must be immediately admitted of the sacerdotal order. "The kings," says Plutarch, "must be either of the order of priests or soldiers, these two classes being distinguished, the one by their wisdom, the other by their
Ægypt with extreme contempt, and as if he had no occasion for their services. Among other indignities, he deprived them of their aruræ 253, or fields of fifty feet square, which, by way of reward, his predecessors had given to each soldier: the result was, that when Sennacherib, king of Arabia and Assyria, attacked Ægypt with a mighty army, the warriors, whom he had thus treated, refused to assist him. In this perplexity the priest retired to the shrine of his god, before which he lamented his danger and misfortunes: here he sunk into a profound sleep, and his deity promised

their valour."—When they have chosen a warrior for king, he is instantly admitted into the order of priests, who instruct him in their mysterious philosophy. The priests may censure the prince, give him advice, and regulate his actions. By them is fixed the time when he may walk, bathe, or visit his wife.

"Such privileges as the above," says M. Larcher, "must necessarily inspire them with contempt for the rest of the nation, and must have excited a spirit of disgust in a people not blinded by superstition." Sethos however experienced how dangerous it was to follow the maxims of the priesthood only.

253 *Arura.*—Arura is a Greek word, which signifies literally a field ploughed for corn, and is sometimes used for the corn itself. It was also an Ægyptian measure. "Ægypt," says Strabo, "was divided into præfectures, which again were divided into Toparchia, and these into other portions, the smallest of which were termed αφεξα." Suidas says it was a measure of fifty feet: from this word is derived *arvum, aro,* &c.—See Hoffman on this word.
promised him in a dream, that if he marched to meet the Assyrians he should experience no injury, for that he would furnish him with assistance. The vision inspired him with confidence; he put himself at the head of his adherents, and marched to Pelusium, the entrance of Egypt: not a soldier accompanied the party, which was entirely composed of tradesmen and artizans. On their arrival at Pelusium, so immense a number of mice infested by night the enemy's camp, that their

---

256 *Tradesmen.*—The Egyptians were divided into three classes; those of rank, who, with the priests, occupied the most distinguished honours of the state; the military, who were also husbandmen; and artizans, who exercised the meaner employments. The above is from Diodorus Siculus, who speaks probably of the three principal divisions: Herodotus mentions seven classes.—Larcher.

255 *Immense a number of mice.*—The Babylonish Talmud hath it, that this destruction upon the army of the Assyrians was executed by lightning, and some of the Targums are quoted for saying the same thing: but it seemeth most likely, that it was effected by bringing on them the hot wind, which is frequent in those parts, and often when it lights among a multitude destroys great numbers of them in a moment, as it frequently happens in those vast caravans of the Mahometans who go their annual pilgrimages to Mecca; and the words of Isaiah, which threatened Sennacherib with a blast that God would send upon him, seem to denote this thing.

Herodotus gives us some kind of a disguised account of this deliverance from the Assyrians, in a fabulous application of it to the city of Pelusium, instead of Jerusalem, and to Sethos the Egyptian, instead of Hezekiah.

It is particularly to be remarked, that Herodotus calls the king of Assyria Sennacherib, as the Scriptures do, and the time
their quivers and bows, together with what secured their shields to their arms, were gnawed in pieces. In the morning the Arabians, finding themselves without arms, fled in confusion, and lost great numbers of their men. There is now to be seen in the temple of Vulcan, a marble statue of this king, having a mouse in his hand, and time in both doth also well agree; which plainly shows that it is the same fact that is referred to by Herodotus, although much disguised in the relation; which may be easily accounted for, when we consider that it comes to us through the hands of such as had the greatest aversion both to the nation and to the religion of the Jews, and therefore would relate nothing in such a manner as would give reputation to either.—Prideaux's Connection.

M. Larcher, in a note of five pages on the above, says little more than our countryman, except that he adopts, with respect to the destruction of the army of Sennacherib, the opinion of Josephus, whose words are these;

"Sennacherib, on his return from the Egyptian war, found his army, which he had left under Rabshakeh, almost quite destroyed by a judicial pestilence, which swept away, in officers and common soldiers, the first night they sat down before the city, one hundred eighty-five thousand men."

In his first edition, Larcher adopted the opinion of Josephus, that this destruction of Sennacherib's army was occasioned by a judicial pestilence; but in his second he retracts this, and considers it as erroneous, and for these reasons: there are no stagnant waters in the neighbourhood of Pelusium, and consequently no putrid exhalations to corrupt the air, or injure the health of the Assyrians. But suppose there had, how could these have effected the destruction of one hundred and eighty-five thousand men in the space of three days. This could only have been by a miracle not less than that recorded in Scripture. Thus, Larcher pertinently observes, in order to detract from Scripture, men, without perceiving it, fall into the most disgusting absurdities.
and with this inscription: "Whoever thou art, "learn, from my fortune, to reverence the gods."

CXLII. Thus, according to the information of the Ægyptians and their priests, from the first king to this last, who was priest of Vulcan, a period of three hundred and forty-one generations had passed, in which there had been as many high priests, and the same number of kings. Three generations are equal to one hundred years, and therefore three hundred generations are the same as ten thousand years; the forty-one generations that remain, make one thousand three hundred and forty years. During the above space of eleven thousand three hundred and forty years, they assert that no divinity appeared in a human form; but they do not say the same of the time anterior to this account, or of that of the kings who reigned afterwards. During the above period of time the sun, they told me, had four times* deviated from his ordinary course, having twice risen where he uniformly goes down, and twice gone down where he uniformly rises. This however had produced no alteration in the climate of Ægypt; the fruits of the earth, and the phenomena of the Nile, had always been the same,

* After examining the different attempts to explain this story of the sun's changing his place four times, Larcher cuts the knot by representing this as an extravagant rôdomontade of the priests.
same, nor had any extraordinary or fatal diseases occurred.

CXLIII. When the historian Hecataeus was at Thebes, he recited to the priests of Jupiter the particulars

The Greeks had a fabulous tradition of the same kind. Plato relates, that under the reign of Atreus, the sun and stars changed their situation in the heavens.

And if to those Egyptian wizards old,
Which in star rede were wont have best insight,
Faith may be given, it is by them told
That since the time they first took the sun's height,
Four times his place he shifted hath in sight,
And twice hath risen where he now doth west,
And wested twice where he ought rise aright.

Spenser, book v. stanz. 8.

256 When the historian Hecataeus.—Athenæus relates the same circumstance as from Hecataeus, which may serve to confirm the assertion of Porphyry, that Herodotus took great part of his second book, with very slight alteration, from Hecataeus. If this fact be once allowed, Herodotus will lose the character that he has long supported, of an honest man, and a faithful historian. But it appears from Athenæus himself, that the work which in later ages passed under the name of Hecataeus the Milesian, was not universally acknowledged for genuine; and Callimachus, who employed much of his time and pains in distinguishing genuine from spurious authors, attributes the supposed work of Hecataeus to another and a later writer. But what is perhaps even a stronger proof in our author's favour, is that he is never charged with the crime of theft by Plutarch, whose knowledge of this plagiarism, if it had ever existed, cannot be questioned, when we consider his extensive and accurate learning; and whose zeal to discover it cannot be doubted, when we reflect that he has written a treatise expressly to prove
particulars of his descent, and endeavoured to prove that he was the sixteenth in a right line from some god. But they did to him what they afterwards did to me, who had said nothing on the subject of my family. They introduced me into a spacious temple, and displayed to me a number of figures in wood; this number I have before specified, for every high priest places here, during

prove the malignity of Herodotus, though in fact it only proves his own. Could Plutarch miss such an opportunity of taxing Herodotus? Could he have failed of saying, that this historian was at once so malicious and so ungrateful as to speak with disrespect and contempt of the author to whom he was obliged for a considerable portion of his own history?

Our materials for an account of Hecataeus are at best but scanty. He was a native of Miletus, and son of one ÁEgi-sander; he was one of the very first writers of prose, with Cadmus and Pherecydes of Scyros. Salmasius contends that he was older than Pherecydes, but younger than Eu-melus. The most ample account of him is found in Vossius. He certainly wrote a book of genealogies; and the sentence with which he commences his history is preserved in Demetrius Phalereus: it is to this effect, "What follows is the recital of Hecataeus of Miletus; I write what seems to me to be true. The Greeks in my opinion have related many things contradictory and ridiculous."

The Egyptian priests absolutely denied to Hecataeus the possibility of a human being's descent from a god. Bergier had connected this sentence with the declaration of the same priests to Herodotus, that no divinity appeared in a human form for a specified number of years. Larcher not attending to this, blames Bergier, as if the other passage did not occur in Herodotus.—T:
during his life, a wooden figure of himself. The priests enumerated them before me, and proved, as they ascended from the last to the first, that the son followed the father in regular succession. When Hecateus, in the explanation of his genealogy, ascended regularly, and traced his descent in the sixteenth line from a god, they opposed a similar mode of reasoning to his, and absolutely denied the possibility of a human being's descent from a god. They informed him that each of these colossal figures was a Piromis, descended from Piromis.

There are many strange and contradictory opinions about this passage, which, if I do not deceive myself, is very plain, and the purport of it this:—"After the fabulous accounts, there had been an uninterrupted succession of Piromis after Piromis, and the Egyptians referred none of these to the dynasties of either the gods or heroes, who were supposed to have first possessed the country."—From hence I think it is manifest that Piromis signifies a man.—Bryant.

M. Lacroze observes, that Brama, which the Indians of Malabar pronounce Biroumas, in the Sanscrite or sacred language of India, signifies the same as Piromis: and that Pirimia, in the language of the inhabitants of Ceylon, means also at this day a man. Quære, is this coincidence the effect of chance, or of the conquests of Sesostris, who left colonies in various parts of Asia?—Larcher.

If it were admitted that Egypt was colonized from India, every difficulty of this kind vanishes at once. Larcher either did not think of this mode of solving it, or distrusted the fact. Nothing certainly appears more absurd than this double line of priests and kings, who each reigned for thirty-three years, for three hundred and forty-one generations.
from a Piromis; and they further asserted, that without any variation this had uniformly occurred to the number of the three hundred and forty-one, but in this whole series there was no reference either to a god or a hero. Piromis in the Egyptian language means one "beautiful and good."

CXLIV. From these priests I learned, that the individuals whom these figures represented, so far from possessing any divine attributes, had all been what I have described. But in the times which preceded, immortal beings had reigned in

It is hardly possible that Herodotus should have been mistaken in his explanation of this word. We have a sufficient number of examples in our own language what variation of meaning, words undergo by the process of time. Thus, from the Saxon gode, good, we have God; the original meaning of man was sin. See Casaubon's remarks on this circumstance. In the old Saxon manuscripts these words good and evil, when they signify God and man, are distinguished by a particular accent. If the reader wishes to see more on this subject, he may consult Casaubon de Lingua Anglica Vetere, p. 236.

Immortal beings.]—M. Larcher says, that all governments were at first theocratic, and afterwards became monarchic and democratic. In the theocratic form the priests governed alone, who also preserved a considerable influence in monarchies and republics. What prevents our supposing that Egypt was governed many thousand years by priests; and that this government, in reality theocratic, was named from
in Ægypt, that they had communication with men, and had uniformly one superior; that Orus, whom the Greeks call Apollo, was the last of these; he was the son of Osiris, and, after he had expelled Typhon, himself succeeded to

from that deity to whom the high priest who enjoyed the sovereign authority attached himself?

In all this, Larcher is wrong, and ought to be corrected. The first governments were patriarchal, then monarchical. The conclusion of the learned Frenchman's remark is absurd enough. Ægypt was governed by kings in the time of Moses: the high antiquity of Ægypt is still among the prevailing cant of infidels. Larcher should have reconsidered this note.

239 Orus.].—According to Plutarch, the Ægyptians held two principles, one good, the other evil. The good principle consisted of three persons, father, mother, and son; Osiris was the father, Isis the mother, and Orus the son. The bad principle was Typhon: Osiris, strictly speaking, was synonymous with reason; Typhon the passions, ἀλευξ, without reason.—T.

250 Typhon.].—Typhon, as the principle of evil, was always inclined to it; all bad passions, diseases, tempests, and earthquakes, were imputed to him. Like the untutored Indians and savages, the Ægyptians paid adoration to Typhon from fear; they consecrated to him the hippopotamos, the crocodile, and the ass. According to Jablonski, the word Typhon is derived from Thne a wind, and phou pernicious.

To Osiris is ascribed the introduction of the vine; "and where," says Mr. Bryant, "that was not adapted to the soil, he showed the people the way to make wine of barley."—T.

The Greeks considered Osiris the same person as Bacchus, because they discovered a great resemblance between the fables related of Bacchus and the traditions of the Ægyptians concerning
the throne; it is also to be observed, that in the Greek tongue Osiris is synonymous with Bacchus.

CXLV. The Greeks consider Hercules, Bacchus, and Pan, as the youngest of their deities; but Ægypt esteems Pan as the most ancient of the gods, and even of those eight\(^\text{26}\) who are accounted the first. Hercules was among those of the second rank in point of antiquity, and one of those

---

concerning Osiris. Learned men of modern times have believed that Isuren, one of the three divinities to whom the Indians now pay adoration, is the ancient Osiris, but this remains to be proved.—Larcher.

The three Indian deities are Brama, Vishnou, and Seeva; where Larcher found Isuren, I cannot imagine.

\(^{26}\) Even of those eight.\)—The ark, according to the traditions of the Gentile world, was prophetic, and was looked upon as a kind of temple or place of residence of the Deity. In the compass of eight persons it comprehended all mankind; which eight persons were thought to be so highly favoured by Heaven, that they were looked up to by their posterity with great reverence, and came at last to be reputed deities. Hence in the ancient mythology of Ægypt there were precisely eight gods; of these the sun was chief, and was said to have reigned first. Some made Hephaistus the first king of that country; whilst others supposed it to have been Pan. There is no real inconsistency in these accounts; they were all three titles of the same deity, the Sun.—Bryant.

Herodotus says, eight of the first sort; he also tells us that Orus, the Apollo of the Greeks, was the last god that reigned: what then can Mr. Bryant mean by saying he was the first?
those called the twelve gods. Bacchus was of the third rank, and among those whom the twelve produced. I have before specified the number of years which the Ægyptians reckon from the time of Hercules to the reign of Amasis: from the time of Pan a still more distant period is reckoned; from Bacchus, the youngest of all, to the time of Amasis, is a period, they say, of fifteen thousand years. On this subject the Ægyptians have no doubts, for they profess to have always computed the years, and to have kept written accounts of them with the minutest accuracy. From Bacchus, who is said to be the son of Semele, the daughter of Cadmus, to the present time, is one thousand six hundred years; from Hercules, the reputed son of Alcmena, is nine hundred years; and from Pan, whom the Greeks call the son of Penelope and Mercury, is eight hundred years, before which time was the Trojan war.

CXLVI. Upon this subject I have given my own opinion, leaving it to my readers to deter-
mine for themselves. If these deities had been known in Greece, and then grown old, like Hercules the son of Amphitryon, Bacchus the son of Semele, and Pan the son of Penelope, it might have been asserted of them, that although mortals, they possessed the names of those deities known in Greece in the times which preceded. The Greeks affirm of Bacchus, that as soon as he was born Jove inclosed him in his thigh, and carried him to Nyša*, a town of Æthiopia beyond.

263 As soon as he was born.—Upon this subject I have somewhere met an opinion to the following effect: When the ancients spoke of the nativity of their gods, we are to understand the time in which their worship was first introduced; when mention is made of their marriage, reference is to be made to the time when the worship of one was combined with that of another. Some of the ancients speak of the tombs of their gods, and that of Jupiter in Crete was notorious, the solution of which is, that the gods sometimes appeared on earth, and after residing for a time amongst men, returned to their native skies: the period of their return was that of their supposed deaths.

The following remark is found in Cicero’s Tusculan Questions: “Ipsi illi majorum gentium dii qui habentur hinc a nobis in cœlum profecti reperiuntur.”—The gods of the popular religions were all but deceased mortals advanced from earth to heaven.—T.

* Diodorus Siculus makes the same remark, and adds, that from this circumstance he derived his name of Dionysos, from his father, and the place where he was brought up.

There were places of this name in Arabia, Cappadocia, Caria, India, and Lydia.
beyond Ægypt: with regard to the nativity of Pan they have no tradition among them; from all which, I am convinced, that these deities were the last known among the Greeks, and that they date the period of their nativity from the precise time that their names came amongst them;—the Ægyptians are of the same opinion.

CXLVII. I shall now give some account of the internal history of Ægypt; to what I learned from the natives themselves, and the information of strangers, I shall add what I myself beheld. At the death of their sovereign, the priest of Vulcan, the Ægyptians recovered their freedom; but as they could not live without kings, they chose twelve, among whom they divided the different districts of Ægypt. These princes connected themselves with each other by intermarriages, engaging solemnly to promote their common interest, and never to engage in any acts of separate policy. The principal motive of their union was to guard against the declaration of an oracle, which had said, that whoever among them should offer in the temple of Vulcan a libation from a brazen vessel, should be sole sovereign of Ægypt; and it is to be remembered that they assembled indifferently in every temple.

CXLVIII. It was the resolution of them all, to leave behind them a common monument of their
their fame:—With this view, beyond the lake Mœris, near the city of crocodiles, they constructed a labyrinth, which exceeds, I can truly say,

264 City of crocodiles.]—We are ignorant of the real name of this city; it is very probable that it was called from the word Champsis, which according to our author was the Egyptian term for crocodile.—Larcher.

265 A labyrinth.]—Diodorus says this was built as a sepulchre for Mendes; Strabo, that it was near the sepulchre of the king that built it, which was probably Imandes. Pomponius Mela speaks of it as built by Psammitichus; but as Menes or Imandes is mentioned by several, possibly he might be one of the twelve kings of greatest influence and authority, who might have the chief ordering and direction of this great building, and as a peculiar honour might have his sepulchre apart from the others.

It was such an extraordinary building, that it was said Daedalus came to Egypt on purpose to see it, and built the labyrinth in Crete for king Minos on the model of this. See a minute description of the labyrinth and temple of the labyrinth by Pococke.

Amidst the ruins of the town of Caroun, the attention is particularly fixed by several narrow, low, and very long cells, which seem to have had no other use than of containing the bodies of the sacred crocodiles: these remains can only correspond with the labyrinth. Strabo, Herodotus, and Ptolemy, all agree in placing the labyrinth beyond the city Arsinoe toward Libya, and on the bank of the lake Mœris, which is the precise situation of these ruins.

Strabo’s account of this place does not exactly accord with that of Herodotus, but it confirms it in general: Strabo describes winding and various passages so artfully contrived, that it was impossible to enter any one of the palaces, or to leave it when entered, without a guide.—Savary.
say, all that has been said of it; whoever will take the trouble to compare them, will find all the works of Greece much inferior to this, both in regard to the workmanship and expense. The temples of Ephesus and Samos may justly claim admiration.

The architect who should be employed to make a plan of the labyrinth, from the description of Herodotus, would find himself greatly embarrassed. We cannot form an idea of the parts which composed it; and as the apartments were then so differently formed from ours, what was not obscure in the time of our author, is too much so for us at present. M. Larcher proceeds in an attempt to describe its architecture; and informs the reader, that he conceives the courts must have been in the style of the hotel de Soubise.

There were anciently four celebrated labyrinths; one in Ægypt, a second in Crete, a third at Lemnos, and a fourth erected by Porsenna in Tuscany. That at Lemnos is described in very high terms by Pliny.

Labyrinth, in its original sense, means any perplexed and twisted place. Suidas adds λυτέςαδι ἐπὶ τοῦ φαλακροῦ, and it is used of prating silly people: in its figurative sense it is applied to any obscure or complicated question, or to any argument which leaves us where we first set out.

The construction of the labyrinth has been imputed to many different persons, on which account the learned have supposed, that there were more labyrinths than one. That this was not the case is satisfactorily proved by Larcher in a very elaborate note.

Larcher, after a long investigation of the subject, finally determines the situation of the labyrinth to have been at Sennour, in opposition to the authority of Pococke, the Abbé Banier, Savary, and others, but in conformity with the opinion of M. Gibert. See Memoires de l'Academie de Inscriptions, v. xxviii, p. 241.
admiration, and the pyramids may individually be compared to many of the magnificent structures of Greece, but even these are inferior to the labyrinth. It is composed of twelve courts, all of which are covered; their entrances are opposite to each other, six to the north and six to the south; one wall encloses the whole; the apartments are of two kinds, there are fifteen hundred above the surface of the ground, and as many beneath, in all three thousand. Of the former I speak from my own knowledge and observation; of the latter, from the information I received. The Egyptian who had the care of the subterraneous apartments would not suffer me to see them, and the reason they alleged was, that in these were preserved the sacred crocodiles*, and the bodies of the kings who constructed

* The following note is from Mr. Wilford's Dissertation on Egypt and the Nile, in the third volume of the Asiatic Researches, p. 425.

From the account given by Herodotus, we may conjecture that the coffins of the sacred crocodiles, as they were called, contained, in fact, the bodies of those princes whom both Egyptians and Hindoos named Sucas, though suc means a parrot in Sanscrit, and a crocodile in the Coptic dialect: the Sanscrit words for a crocodile are cumbhira and nacra, to which some expositors of the Amarcosh add avagraha and gnaha; but if the royal name was symbolical, and implied a peculiar ability to seize and hold, the symbol might be taken from a bird of prey, as well as from the lizard kind, especially as a sect of the Egyptians abhorred the crocodile, and would
structured the labyrinth: of these therefore I presume not to speak; but the upper apartments, I myself examined, and I pronounce them among the greatest efforts of human industry and art. The almost infinite number of winding passages through the different courts, excited my warmest admiration: from spacious halls I passed through smaller apartments, and from them again to large and magnificent courts, almost without end. The ceilings and walls are all of marble, the latter richly adorned with the finest sculpture; around each court are pillars of the whitest and most polished marble: at the point where the labyrinth terminates, stands a pyramid one hundred and sixty cubits high, having large figures of animals engraved on its outside, and the entrance to it is by a subterraneous path.

CXLIX. Wonderful as this labyrinth is, the lake Maris*, near which it stands, is still more extraordinary:

would not have applied it as an emblem of any legal and respectable power, which they would rather have expressed by a hawk or some distinguished bird of that order; others, indeed, worshipped crocodiles, and I am told that the very legend before us, framed according to their notions, may be found in some of the Puranas.

*The lake Maris.—That the reader may compare what modern writers and travellers have said on this subject, I shall place before them, from Larcher, Pococke, Norden, Savary, &c. what to me seems most worthy of attention.

I shall
extraordinary: the circumference of this is three thousand six hundred stadia, or sixty schaeni, which

I shall first remark, that Herodotus, Diodorus, and Pomponius Mela, differ but little in opinion concerning its extent: according to the former it was four hundred and fifty miles in circumference, the latter says it was five hundred; the former assert also that in some places it was three hundred feet deep. The design of it was probably to hinder the Nile from overflowing the country too much, which was effected by drawing off such a quantity of water, when it was apprehended that there might be an inundation sufficient to hurt the land. The water, Pococke observes, is of a disagreeable muddy taste, and almost as salt as the sea, which quality it probably contracts from the nitre that is in the earth, and the salt which is every year left in the mud.

The circumference of the lake at present is no more than fifty leagues. Larcher says we must distinguish betwixt the lake itself, and the canal of communication from the Nile; that the former was the work of nature, the latter of art. This canal, a most stupendous effort of art, is still entire; it is called Bahr Yousoph, the river of Joseph, according to Savary forty leagues in length. There were two other canals with sluices at their mouths, from the lake to the river, which were alternately shut and opened when the Nile increased or decreased. This work united every advantage, and supplied the deficiencies of a low inundation, by retaining water which would uselessly have been expended in the sea. It was still more beneficial when the increase of the Nile was too great, by receiving that superfluity which would have prevented seed-time.

Were the canal of Joseph cleansed, the ancient mounds repaired, and the sluices restored, this lake might again serve the same purposes.—The pyramids described by Herodotus no longer subsist, neither are they mentioned by Strabo.

When it is considered that this was the work of an individual,
which is the length of Aegypt about the coast. This lake stretches itself from north to south, and in its deepest parts is two hundred cubits; it is entirely the produce of human industry, which indeed the work itself testifies, for in its centre may be seen two pyramids, each of which is two hundred cubits above and as many beneath the water; upon the summit of each is a colossal statue of marble, in a sitting attitude. The precise altitude of these pyramids is consequently four hundred cubits; these four hundred cubits, or one hundred orgyiae, are adapted to a stadium of six hundred feet; an orgyia is six feet, or four cubits, for a foot is four palms, and a cubit six.

The waters of the lake are not supplied by springs; the ground which it occupies is of itself remarkably dry, but it communicates by a secret channel with the Nile; for six months the lake empties itself into the Nile, and the remaining six

vidual, and that its object was the advantage and comfort of a numerous people, it must be agreed, with M. Savary, that Mœris, who constructed it, performed a far more glorious work than either the pyramids or the labyrinth.—’T.

The stupendous pyramid, said to have been six hundred feet high, in the midst of the lake Mœris, was raised, we are told, by a king named Mœris, Myris, Marros, Maindes, Mendes, and Imandes, a strong instance of one name variously corrupted; and I have no doubt that the original of all these variations was Merhi or Medhi. Even to this day in India the pillars or obelisks often raised in the middle of the tanks or pools, are called Merhis.—Wilford.
six the Nile supplies the lake. During the six months in which the waters of the lake ebb, the fishery which is here carried on furnishes the royal treasury with a talent of silver every day; but as soon as the Nile begins to pour its waters into the lake *, it produces no more than twenty minæ.

CL. The inhabitants affirm of this lake, that it has a subterraneous passage inclining inland towards

---

267 *The fishery.]—Diodorus Siculus informs us, that in this lake were found twenty-two different sorts of fish, and that so great a quantity were caught, that the immense number of hands perpetually employed in salting them were hardly equal to the work.—*T.*

268 *Talent of silver.]—The silver which the fishery of this lake produced was appropriated to find the queen with clothes and perfumes.—*Larcher.*

* It is difficult to believe that the course of the Nile ever lay through the lake of Kaeroun (Mœris); first, because the lake is said to be shut up by elevated lands, and, secondly, because it is probable that in early times the bed of the Nile was too low to admit its waters to flow into the hollow tract which now contains the lake.

Concerning the lake Mœris the ancient stories are so improbable, that one naturally looks for a more rational account of its formation. Might not the opening of a canal for the purpose of filling the hollow space which now contains the lake, be the great work of forming the lake Mœris? They might have built the edifices described by Herodotus previous to the final influx of the water. The circumstance of the water flowing alternately into the lake and back again into the Nile, according to the seasons, is perfectly reasonable,
towards the west, to the mountains above Memphis, where it discharges itself into the Libyan sands. I was anxious to know what became of the earth, which must somewhere have necessarily been heaped up in digging this lake; as my search after it was fruitless, I made inquiries concerning it of those who lived nearer the lake. I was the more willing to believe them, when they told me where it was carried, as I had before heard of a similar expedient used at Nineveh, an Assyrian city. Some robbers, who were solicitous to get possession of the immense treasures of Sardanapalus king of Nineveh, which were

reasonable, since the passage to it was narrow, and the expanse of water very great. Pococke reckons it fifty miles in length, by ten wide; Mr. Brown says, p. 169, the length may be between thirty and forty miles, the breadth nearly six. Nothing, says he, can present an appearance so unlike the works of men; on the N. E. and S. is a rocky ridge in every appearance primaeval.—Renvel.

What became of the earth.]—Herodotus, when he viewed this lake, might well be surprized at the account they gave him, that it was made by art; and had reason to ask them what they did with the earth they dug out. But he seems to have too much credulity, in being satisfied when they told him that they carried the earth to the Nile, and so it was washed away by the river; for it was very extraordinary to carry such a vast quantity of earth above ten miles from the nearest part of the lake, and fifty or sixty from the further parts, even though they might contrive water-carriage for a great part of the way. This I should imagine a thing beyond belief, even if the lake were no larger than it is at present, that is, it may be fifty miles long and ten broad.—Pococke.
were deposited in subterraneous apartments, began from the place where they lived to dig under ground, in a direction towards them. Having taken the most accurate measurement, they continued their mine to the palace of the king; as night approached they regularly emptied the earth into the Tigris, which flows near Nineveh, and at length accomplished their purpose. A plan entirely similar was executed in Ægypt, except that the work was here carried on not by night but by day; the Ægyptians threw the earth into the Nile, as they dug it from the trench; thus it was regularly dispersed, and this, as they told me, was the process of the lake's formation.

CLI. These twelve kings were eminent for the justice of their administration. Upon a certain occasion they were offering sacrifice in the temple of Vulcan, and on the last day of the festival were about to make the accustomed libation; for this purpose the chief priest handed to them the golden cups used on these solemnities, but

\[270 \text{To make the accustomed libation.}\]—As the kings were also priests, they did not before the time of Psammitichus drink wine; and if sometimes they made libations to the gods with this liquor, it was not that they believed it agreeable to them, but that they considered it as the blood of the gods who had formerly fought against them: they thought that their bodies, incorporated with the earth, had produced the vine.—Plutarch, de Iside & Osiride.
he mistook the number, and instead of twelve gave only eleven. Psammitichus\textsuperscript{271}, who was the last of them, not having a cup, took off his helmet\textsuperscript{272}, which happened to be of brass, and from this poured his libation. The other princes wore helmets in common, and had them on the present occasion, so that the circumstance of this one king having and using his, was accidental and innocent. Observing, however, this action of Psammitichus, they remembered the prediction of the oracle, "that he among them who should pour a libation from a brazen vessel, should be sole

\textsuperscript{271} Psammitichus.]—In the eight-and-twentieth year of the reign of Manasseh; the twelve confederated kings of Egypt, after they had jointly reigned there fifteen years, falling out among themselves, expelled Psammitichus, one of their number, out of his share which he had hitherto had with them in the government of the kingdom, and drove him into banishment; whereupon flying into the fens near the sea, he lay hid there, till having gotten together, out of the Arabian free-booters and the pirates of Caria and Ionia, such a number of soldiers as with the Egyptians of his party made a considerable army, he marched with it against the other eleven; and having overthrown them in battle, slew several of them, and drove the rest out of the land, and thereon seizing the whole kingdom to himself reigned over it in great prosperity fifty-and-four years.—Prideaux.

\textsuperscript{272} His helmet.]—It is certain that the ancients made use of their helmets on various occasions; whenever any thing was to be decided by lots, the lots were cast into a helmet; and as they appear very obvious for such a purpose, so many instances in ancient writers occur of soldiers drinking out of them, as we may now do occasionally out of our hats.—T.
sole monarch of Ægypt.” They minutely investigated the matter, and being satisfied that this action of Psammitichus was entirely the effect of accident, they could not think him worthy of death; they nevertheless deprived him of a considerable part of his power; and confined him to the marshy parts of the country, forbidding him to leave this situation, or to communicate with the rest of Ægypt.

CLII. This Psammitichus had formerly fled to Syria, from Sabacus the Æthiopian, who had killed his father Necos; when the Æthiopian, terrified by the vision, had abandoned his dominions, those Ægyptians who lived near Sais had solicited Psammitichus to return. He was now a second time driven into exile amongst the fens, by the eleven kings, from this circumstance of the brazen helmet. He felt the strongest resentment for the injury, and determined to avenge himself on his persecutors; he sent therefore to the oracle of Latona, at Butos 273, which has among

273 Latona, at Butos.]—This goddess, one of the eight most ancient divinities of the country, was called Buto, and particularly honoured in the city of that name; she had been the nurse of Apollo and Diana, that is to say, of Orus and Bubastis, whom she had preserved from the fury of Typhon; the mole was sacred to her. Antoninus Liberalis says, that she assumed the form of this little animal to elude the pursuit
among the Egyptians the highest character for veracity. He was informed, that the sea should avenge his cause, by producing brazen figures of men. He was little inclined to believe that such a circumstance could ever occur; but some time afterwards, a body of Ionians and Carians, who had been engaged in a voyage of plunder, were compelled by distress to touch at Egypt; they landed in brazen armour. Some Egyptians hastened to inform Psammitichus in his marshes of this incident; and as the messenger had never before seen persons so armed, he said, that some brazen men had arisen from the sea, and were plundering suit of Typhon. Plutarch says, that the Egyptians rendered divine honours to the mole on account of its blindness; darkness, according to them, being more ancient than light. M. Larcher adds, as a remark upon the observation of Plutarch, what indeed the researches of natural historians have made manifest, that the mole is not blind, but has eyes, though very minute.

Psammitichus destroyed Tementhes king of Egypt. The god Ammon had cautioned Tementhes, who consulted him, to beware of cocks. Psammitichus being intimately acquainted with Pignes the Carian, learned from him that the Carians were the first who wore crests upon their helmets: he instantly comprehended the meaning of the oracle, and engaged the assistance of a large body of Carians; these he led towards Memphis, and fixed his camp near the temple of Isis; here he engaged and conquered his adversary.—Polyænus.
plundering the country. He instantly conceived this to be the accomplishment of the oracle's prediction, and entered into alliance with the strangers, engaging them by splendid promises to assist him; with them and his Ægyptian adherents, he vanquished the eleven kings.

CLIII. After he thus became sole sovereign of Ægypt, he built at Memphis the vestibule of the temple of Vulcan, which is towards the south; opposite to this he erected an edifice for Apis, in which he is kept, when publicly exhibited: it is supported by colossal figures twelve cubits high, which serve as columns; the whole of the building is richly decorated with sculpture. Apis, in the language of Greece, is Epaphus.

CLIV. In acknowledgement of the assistance he had received, Psammitichus conferred on the Ionians and Carians certain lands, which were termed the Camp, immediately opposite to each other, and separated by the Nile: he fulfilled also his other engagements with them, and entrusted to their care some Ægyptian children, to be instructed in the Greek language, from whom come those who, in Ægypt, act as interpreters. This district, which is near the sea, somewhat below Bubastis, at the Pelusian mouth of the Nile, was inhabited by the Ionians and Carians for a considerable time. At a succeeding pe-
tiod, Amasis, to avail himself of their assistance against the Ægyptians, removed them to Memphis. Since the time of their first settlement in Ægypt, they have preserved a constant communication with Greece, so that we have a perfect knowledge of Ægyptian affairs from the reign of Psammitichus. They were the first foreigners whom the Ægyptians received among them: within my remembrance, in the places which they formerly occupied, the docks for their ships, and vestiges of their buildings, might be seen.

CLV. Of the Ægyptian oracle I have spoken already, but it so well deserves attention, that I shall expatiate still farther on the subject. It is sacred to Latona, and, as I have before said, in a large city called Butos, at the Sebennitic mouth of the Nile, as approached from the sea. In this city stands a temple of Apollo and Diana; that of Latona, whence the oracular communications are made, is very magnificent, having porticos forty cubits high. What most excited my admiration, was the shrine of the goddess; it was of

—Shrine of the goddess.]—This enormous rock, two hundred and forty feet in circumference, was brought from a quarry in the isle of Philæ (or Philœ) near the cataracts, on rafts, for the space of two hundred leagues, to its destined place, and without contradiction was the heaviest weight ever moved by human power. Many thousand workmen, according to
of one solid stone\textsuperscript{276}, having equal sides; the length of each was forty cubits; the roof is of another solid stone, no less than four cubits in thickness.

CLVI. Of all the things which here excite attention, this shrine is, in my opinion, the most to

history, were three years employed in taking it to its place of destination.—Savary.

\textsuperscript{276} One solid stone.]—About this isle (Elephantine) there are several smaller islands, as two to the west, and four to the south, which are high above the water, and also several large rocks of red granite. Two of them appear to have been worked as quarries, as well as the south end of Elephantine. Out of one of these islands probably that entire room was cut of one stone, that was carried to Sais, taking, it may be, the advantage of the situation of the rock, so as to have only the labour of separating the bottom of it from the quarry, and having first probably hollowed the stone into a room of the dimensions described when I spoke of Sais.—Pococke.

The grand and sublime ideas which the ancients entertained on subjects of architecture, and other monuments of art, almost exceed our powers of description. This before us is a most extraordinary effort of human industry and power; but it appears minute and trifling, compared with an undertaking of a man named Stesicrates, proposed to Alexander, and recorded by Plutarch. He offered to convert mount Athos into a statue of that prince. This would have been in circumference no less than one hundred and twenty miles, in height ten. The left arm of Alexander was to be the base of a city, capable of containing ten thousand inhabitants. The right arm was to hold an urn, from which a river was to empty itself into the sea.—T.
to be admired. Next to this, is the island of Chemmis, which is near the temple of Latona, and stands in a deep and spacious lake; the Egyptians affirm it to be a floating island: I did not witness the fact, and was astonished to hear that such a thing existed. In this island is a large edifice sacred to Apollo, having three altars, and surrounded by palms, the natural produce of the soil. There are also great varieties of other plants, some of which produce fruit, others are barren. The Egyptians thus explain the circumstance of this island’s floating: it was once fixed and immovable, when Latona, who has ever been esteemed one of the eight primary divinities, dwelt at Butos. Having received Apollo in trust from Isis, she consecrated and preserved him in this island, which, according to their

277 Floating island.]—I am ignorant whether Chemmis has ever been a floating island. The Greeks pretend that Delos floated. I am persuaded they only invented that fable from the recital of Egyptians settled amongst them; and that they attributed to Delos, the birth-place of Apollo, what the Egyptians related of Chemmis, the place of retreat to their Apollo. A rock two thousand toises long could not float upon the waves; but the Greeks, who dearly loved the marvellous, did not examine things so closely.—Larcher.

In marshy lakes, nothing is more likely than that there should sometimes be floating masses of vegetation closely matted together. Major Remmel informs me he has seen and been actually upon a small island of this kind.
their account, now floats. This happened when Typhon, earnestly endeavouring to discover the son of Osiris, came hither. Their tradition says, that Apollo and Diana were the offspring of Bacchus and Isis, and that Latona was their nurse and preserver. Apollo, Ceres, and Diana, the Egyptians respectively call Orus, Isis, and Bubastis. From this alone, Æschylus, son of Euphorion, the first poet who represented Diana as the daughter of Ceres, took his account, and referred to this incident the circumstance of the island's floating.

CLVII. Psammitichus reigned in Egypt fifty-four years, twenty-nine of which he consumed in the siege of a great city of Syria, which he afterwards took; the name of this place was Azotus.

I know

278 Æschylus. — This was doubtless in some piece not come down to us. Pausanias says also, that Æschylus, son of Euphorion, was the first who communicated to the Greeks the Egyptian history; that Diana was the daughter of Ceres, and not of Latona. — Larcher.

The same remark is made by Valcnaer, in Wesseling's edition of Herodotus. But all are united in the opinion, that Pausanias made his remark from this passage of Herodotus.

279 Azotus. — The modern name of this place is Ezdoud, of which Volney remarks, that it is now famous only for its scorpions. It was one of the five satrapies of the Philistines, who kept here, the idol of their god Dagon. Its Scriptural name
I know not that any town ever sustained so long and obstinate a siege.

CLVIII. Psammitichus had a son, whose name was Neco, by whom he was succeeded in his authority. This prince first commenced that canal 250 leading to the Red Sea, which Darius, king

name was Ashdod. When the Philistines took the ark from the Jews, they placed it in the temple of Dagon, at Ashdod. See 1 Samuel, chap. v. 2, 3.

"When the Philistines took the ark of God, they brought it into the house of Dagon, and set it by Dagon.

"And when they of Ashdod arose early on the morrow, behold, Dagon was fallen upon his face to the earth before the ark of the Lord," &c.

This place is also mentioned in the Acts. Philip, having baptized the eunuch of Candace, was caught away by the Spirit of the Lord, and found at Azotus. There is still in this place an old structure, with fine marble pillars, which the inhabitants say was the house which Samson pulled down.—T.

250 That canal.]—The account given by Diodorus Siculus is this:—The canal reaching from the Pelusian mouth of the Nile to the Sinus Arabicus and the Red Sea, was made by hands. Neco, the son of Psammitichus, was the first that attempted it, and after him Darius the Persian carried on the work something farther, but left it at length unfinished; for he was informed by some, that in thus digging through the isthmus he would cause Egypt to be deluged, for they shewed him that the Red Sea was higher than the land of Egypt. Afterwards Ptolemy the Second finished the canal, and in the most proper place contrived a sluice for confining the water, which was opened when they wanted to sail through, and was immediately closed again, the use of it answering
king of Persia, afterwards continued. The length of this canal is equal to a four days voyage, and it is wide enough to admit two triremes abreast. The water enters it from the Nile, a little above the city Bubastis: it terminated in the Erythrean Sea, not far from Patumos, an Arabian town. They began to sink this canal in that part of Egypt which is nearest Arabia. Contiguous to it is a mountain which stretches towards Memphis, and contains quarries of stone. Commencing at the foot of this, it extends from west to east, through a considerable tract of country, and where a mountain opens to the south, is discharged into the Arabian gulf. From the northern to the southern, or, as it is generally called, the Erythrean Sea, the shortest passage is over mount Cassius, which divides Egypt from Syria, from whence to the Arabian gulf are exactly* a thousand stadia. The way by the canal, answering extremely well the design. The river flowing through this canal is called the Ptolemaean, from the name of its author. Where it discharges itself into the sea it has a city named Arsinoc. Of this canal, Norden remarks that he was unable to discover the smallest trace, either in the town of Kieni, or the adjacent parts. Indeed I am myself strongly inclined to believe that no such junction ever took place.

* It is evident both from the Scholiast and Suidas, that the word ἀπαρτι has been omitted in the text.

This chapter, as Larcher observes, very satisfactorily proves that the Arabian gulf was called the Erythrean Sea, long before the time of Alexander. See Gosselin's Geographical Work.
on account of the different circumflexions, is considerably longer. In the prosecution of this work, under Necos, no less than one hundred and twenty thousand Ægyptians perished. He at length desisted from his undertaking, being admonished by an oracle, that all his labour would turn to the advantage of a barbarian; and it is to be observed, that the Ægyptians term all barbarians, * who speak a language different from their own.

CLIX. As soon as Necos discontinued his labours with respect to the canal, he turned all his thoughts to military enterprizes. He built vessels of war, both on the Northern Ocean, and in that part of the Arabian gulph which is near the Erythrean† Sea. Vestiges of his naval undertakings are still to be seen. His fleets were occasionally employed, but he also by land conquered the Syrians in an engagement near the town of Magdolum 231, and after his victory obtained

* This is a singular remark from a Greek, whose nation esteemed all other nations barbarians.
† By the Northern Ocean Herodotus here means the Mediterranean Sea. The Erythrean Sea comprehends both the Arabian Gulph and the sea beyond the Straits of Babelmandeb.

231 Magdolum.]—The battle here mentioned was against Josias, king of Judah. It did not take place at Magdolum, a place in Lower Ægypt, but at Magiddo. The resemblance of the names deceived Herodotus.—Larcher.
tained possession of Cadytis, a Syrian city. The vest which he wore when he got this victory, he consecrated to Apollo, and sent to the Mile-
sian Branchidæ. After a reign of seventeen years, he died, leaving the kingdom to his son Psammis.

CLX. During the reign of this prince, some ambassadors arrived in Ægypt from the Eleans. This people boasted that the establishment of the Olympic games possessed every excellence, and was not surpassed even by the Ægyptians, though the wisest of mankind. On their arrival, they explained the motives of their journey; in consequence of which the prince called a meeting of the wisest of his subjects: at this assembly the Eleans* described the particular regulations they had

282 Cadytis.]-This city of Cadytis could be no other than Jerusalem. Herodotus afterwards describes this to be a mountainous city in Palestine, of the bigness of Sardis. There could be no other equal to Sardis, but Jerusalem. It is certain from Scripture, that after this battle Necos did take Jerusalem, for he was there when he made Jehoiakim king.—See Prideaux, Connect. i. 56—7.

D'Anville also considers Cadytis as Jerusalem, though some authors dissent. See what I have said before on this subject.

* The Eleans did not follow the advice of the Ægyptians; nevertheless there seems no occasion to accuse them of undue partiality. When they became subject to the Romans,
had established; and desired to know if the Egyptians could recommend any improvement. After some deliberation, the Egyptians inquired whether their fellow-citizens were permitted to contend at these games. They were informed in reply, that all the Greeks without distinction were suffered to contend. The Egyptians observed, that this must of course lead to injustice, for it was impossible not to favour their fellow-citizens, in preference to strangers. If, therefore, the object of their voyage to Egypt was to render their regulations perfect, they should suffer only strangers to contend in their games, and particularly exclude the Eleans.

CLXI. Psammis reigned but six years; he made an expedition to Ethiopia, and died soon afterwards. He was succeeded by his son Apries, who, next to his grandfather Psammitichus,

mans, some of the great men of Rome occasionally wrote to them in behalf of some of the combatants: but the judges of the games made a point of not opening these letters till after the prizes had been decided.

253 Apries.]—This is the same who in Scripture is called Pharaoh Hophra. It was at this period that Ezekiel was carried to Jerusalem, and shewn the different kinds of idolatry then practised by the Jews, which makes up the subject of the 8th, 9th, 10th, and 11th chapters of his prophecies.—See Prideaux.
mitichus was fortunate beyond all his predecessors, and reigned five-and-twenty years. He made war upon Sidon, and engaged the king of Tyre in battle by sea. I shall briefly mention in this place the calamities which afterwards befell him; but I shall discuss them more fully when I treat of the Libyan affairs. Apries having sent an army against the Cyreneys, received a severe check. The Egyptians ascribed this misfortune to his own want of conduct; and imagining themselves marked out for destruction, revolted from his authority. They supposed his views were, by destroying them, to secure his tyranny over the rest of their country. The friends, therefore, of such as had been slain, with those who returned in safety, openly rebelled.

CLXII. On discovery of this, Apries sent Amasis

---

284 *Was fortunate.*—Herodotus in this place seemingly contradicts himself: how could he be termed most fortunate, who was dethroned and strangled by his subjects? He probably, as M. Larcher also observes, means to be understood of the time preceding the revolt.—*T.*

285 *Five-and-twenty years.*—Diodorus Siculus says he reigned twenty-two years; Syncellus, nineteen.

286 *Discuss them more fully.*—This refers to book the fourth, chap. clix. of our author; but Herodotus probably forgot the promise here made, for no particulars of the misfortunes of Apries are there mentioned.—*T.*
Amasis to sooth the malcontents. Whilst this officer was persuading them to desist from their purpose, an Egyptian standing behind him placed an helmet on his head, saying that by this act he made him king. The sequel proved that Amasis was not averse to the deed; for as soon as the rebels had declared him king, he prepared to march against Apries; on intelligence of this event, the king sent Patarbemis, one of the most faithful of those who yet adhered to him, with directions to bring Amasis alive to his presence. Arriving where he was, he called to Amasis. Amasis was on horseback, and lifting up his leg, he broke wind, and bade him carry that to his master. Patarbemis persisted in desiring him to obey the king; Amasis replied, he had long determined to do so, and that Apries should have no reason to complain of him, for he would soon be with him, and bring others also. Patarbemis was well aware of the purport of this answer; taking, therefore, particular notice of the hostile preparations of the rebels, he returned, intending instantly to inform the king of

297 Helmet on his head.]—The helmet in Egypt was the distinction of royalty.

298 Was not averse.]—Diodorus Siculus relates, that Amasis, so far from making any great effort to bring back those who had abandoned Apries, according to the orders he had received from his master, encouraged them to persist in their rebellion, and joined himself to them.
of his danger. Apries, when he saw him, without hearing him speak, as he did not bring Amasis, ordered his nose and ears to be cut off. The Ægyptians of his party, incensed at this treatment of a man much and deservedly respected, immediately went over to Amasis.

CLXIII. Apries on this, put himself at the head of his Ionian and Carian auxiliaries, who were with him to the amount of thirty thousand men, and marched against the Ægyptians. Departing from Sais, where he had a magnificent palace, he proceeded against his subjects; Amasis also prepared to meet his master and the foreign mercenaries. The two armies met at Momemphis, and made ready for battle.

CLXIV. The Ægyptians are divided into seven classes 289. These are, the priests, the military,

---

289 Seven classes.—I have remarked on this subject, chap. cxli. from Diodorus, that the division of the Ægyptians was in fact but into three classes, the last of which was subdivided into others.

The Indians are divided into four principal casts, each of which is again subdivided;—Bramins, the military, labourers, and artizans.—T.

It is observable of the Iberians, that they were divided into different casts, each of which had its proper function. The rank and office of every tribe were hereditary and unchangeable. This rule of invariable distinction prevailed nowhere else except in India and in Ægypt.—Bryant.
litary, herdsmen, swineherds, tradesmen, interpreters, and pilots. They take their names from their professions. Ægypt is divided into provinces, and the soldiers, from those which they inhabit, are called Calasiries and Hermotybies.

CLXV. The Hermotybian district contains Busiris, Sais, Chemmis, Papremis, the island of Prosopis, and part of Natho; which places, at the highest calculation, furnish one hundred and sixty thousand Hermotybians. These, avoiding all mercantile employments, follow the profession of arms.

290 Profession of arms. [With the following remark of M. Larcher, the heart of every Englishman must be in unison. To hear a native of France avow an abhorrence of despotism, and a warm attachment to liberty, has been a most unusual circumstance. On the subject of standing armies, nothing, perhaps, has been written with greater energy and effect than by Mr. Moyle.

"Every country," says M. Larcher, "which encourages a standing army of foreigners, and where the profession of arms is the road to the highest honours, is either enslaved, or on the point of being so. Foreign soldiers in arms, are never so much the defenders of the citizens, as the attendants of the despot. Patriotism, that passion of elevated souls, which prompts us to noble actions, weakens and expires. The interest which forms an union betwixt the prince and his subjects, ceases to be the same, and the real defence of the state can no longer be vigorous. Of this, Ægypt is a proof: its despots, not satisfied with the national troops, always ready for service, had recourse to foreign mercenaries. They were depressed, and passed with little difficulty
The Calasirians inhabit Thebes, Bubastis, Apthis, Tanis, Mendes, Sebennis, Athribis, Pharbaethis, Thmuis, Onuphis, Anysis, and Mycephoris, which is an island opposite to Bubastis. In their most perfect state of population, these places furnish two hundred and fifty thousand men. Neither must these follow mechanic employments, but the son regularly succeeds the father\textsuperscript{291} in a military life.

culty under the dominion of the Persians, afterwards under that of Greece and of Rome, of the Mamelukes, and the Turks. The tyrant could not be loved by his slaves, and without the love of his subjects, the prince totters on his throne, and is ready to fall when he thinks his situation the most secure."

"Amongst men," says \textit{Eschines}, "there are three sorts of governments, monarchic, oligarchic, and republican. Monarchies and oligarchies are governed by the caprice of those who have the management of affairs, republics by established laws. Know then, O Athenians! that a free people preserve their liberty and lives by the laws, monarchies and oligarchies by tyranny and a standing army."

To the above, I cannot resist the inclination I have to add from Mr. Moyle the underwritten:

"The Israelites, Athenians, Corinthians, Achaians, Lacedaemonians, Thebans, Samnites, and Romans, none of them, when they kept their liberty, were ever known to maintain any soldier in constant pay within their cities, or ever suffered any of their subjects to make war their profession, well knowing that the sword and sovereignty always march hand in hand."—\textit{T}.

\textsuperscript{291} Regularly succeeds the father.]—We know very well, that nothing is more injurious to the police or municipal constitution of any city or colony, than the forcing of a particular
ticular trade; nothing more dangerous than the over-peo-
ling any manufacture, or multiplying the traders and dealers,
of whatever vocation, beyond their natural proportion, and
the public demand. Now it happened of old in Egypt, the
mother land of superstition, that the sons of certain artists
were by law obliged always to follow the same calling with
their father.—See Lord Shaftesbury's Miscellaneous Reflections.

Before the invention of letters, mankind may be said to
have been perpetually in their infancy, as the arts of one age
or country generally died with their possessors; whence
arose the policy which still continues in Indostan, of obli-
ging the son to practise the profession of his father.—See
notes to a poem called The Loves of the Plants, p. 58.

The resemblance between the ancient Egyptians and the
Hindoos is manifest from various circumstances. The fol-
lowing extract is from Robertson's Disquisition on India:

The whole body of the people was divided into four orders,
or casts. The members of the first, deemed the most sacred,
had it for their province, to study the principles of religion,
to perform its functions, and to cultivate the sciences; they
were the priests, the instructors, and philosophers of the
nation. The members of the second order were entrusted
with the government and defence of the state: in peace,
they were its rulers and magistrates; in war, they were the
generals who commanded its armies, and the soldiers who
fought its battles. The third was composed of husbandmen
and merchants; and the fourth of artisans, labourers, and
servants. None of these can ever quit his own cast, or be
admitted into another. The station of every individual is
unalterably fixed, his destiny is irrevocable, and the walk of
life is marked out, from which he must never deviate. This
line of separation is not only established by civil authority,
but confirmed and sanctioned by religion; and each order,
from the Ægyptians, for I have also seen it observed in various parts of Thrace, Scythia, Persia, and Lydia. It seems, indeed, to be an established prejudice, even among nations the least refined, to consider mechanics and their descendants in the lowest rank of citizens, and to esteem those as the most noble who were of no profession, annexing the highest degrees of honour to the exercise of arms. This idea prevails throughout Greece, but more particularly at Lacedæmon; the Corinthians, however, do not hold mechanics in disesteem.

CLXVIII. The soldiers and the priests are the only ranks in Ægypt which are honourably distinguished; these each of them receive from the public a portion of ground of twelve arurae, free from all taxes. Each arura contains an hundred Ægyptian cubits*, which are the same as

or cast, is said to have proceeded from the Divinity in such a different manner, that to mingle and confound them would be deemed an act of most daring impiety. Nor is it between the four different tribes alone that such inseparable barriers are fixed; the members of each cast adhere invariably to the profession of their forefathers. From generation to generation the same families have followed, and will always continue to follow, one uniform line of life.

* But the cubit itself, or peck (πηνευμ), as it is still called, has not continued the same; for Herodotus acquaints us, that in his time the Ægyptian peck, or cubit, was the same with
as so many cubits of Samos. Besides this, the military enjoy, in their turns, other advantages: one thousand Calasirians and as many Hermotyrians are every year on duty as the king’s guards; whilst on this service, in addition to their assignments of land, each man has a daily allowance of five pounds of bread, two of beef, with four arusteres of wine.

CLXIX. Apries with his auxiliaries, and Amasis at the head of the Egyptians, met and fought at Momemphis. The mercenaries displayed great valour, but, being much inferior in number, were ultimately defeated. Apries is said to have entertained

with the Samian, which, being no other than the common Grecian or Attic cubit, contained very little more than a foot and a half of English measure. Three or four centuries afterwards, when the famous statue of the Nile, that is still preserved at Rome, was made, the cubit seems to have been, a little more or less, twenty inches; for of that height, according to the exactest measure that could be taken, are the sixteen little children that are placed upon it, which, according to Philostratus and Pliny, represented so many cubits. The present cubit is still greater, though it will be difficult to determine the precise length of it; and, indeed, with regard to the measures of the Arabians, as well as of some other nations, we have very few accounts or standards we can trust to.—Shaw.

29* Arusteres.]—Hesychius makes the word αρυστρη synonomous with κοτυλή, which is a measure somewhat less than a pint.—T.

V O L. II.
tertained so high an opinion of the permanence of his authority, that he conceived it not to be in the power even of a deity to dethrone him. He was, however, conquered and taken prisoner; after his captivity he was conducted to Sais, to what was formerly his own, but then the palace of Amasis. He was here confined for some time, and treated by Amasis with much kindness and attention. But the Egyptians soon began to reproach him for preserving a person who was their common enemy, and he was induced to deliver up Apries to their power. They strangled, and afterwards buried him in the tomb of his ancestors, which stands in the temple of Minerva.

293 They strangled, &c.]—It is to this prince, whom, as I before mentioned, the Scriptures denote by the name of Pharaoh Hophra, that the following passages allude:

"The land of Egypt shall be desolate and waste; and they shall know that I am the Lord: because he hath said, The river is mine, and I have made it."

"Behold, therefore, I am against thee, and against thy rivers, and I will make the land of Egypt utterly waste and desolate." Ezekiel, xxix. 9, 10.

"Thus saith the Lord, I will give Pharaoh Hophra, king of Egypt, into the hand of his enemies, and into the hand of them that seek his life." Jeremiah, xliv. 30.

See also Jeremiah, xliii. xliv. xlv. Ezekiel, xxix. xxx. xxxi. xxxii. In the person of Apries all these prophecies were accomplished. See also Prideaux Connect. i. 39.—T.

"Apryes was perswaded that neither God nor the divell coulde have joyned his nose, of the empyre."—Herodotus his second booke, entituled Euterpe:
on the left side of the vestibule. In this temple the inhabitants of Sais buried all the princes who were of their province, but the tomb of Amasis is more remote from the building, than that of Apries and his ancestors.

CLXX. In the area before this temple, is a large marble chamber*, magnificently adorned with obelisks, in the shape of palm-trees, with various other ornaments; in this chamber is a niche with two doors, and here his body was placed. They have also at Sais the tomb of a certain personage, whom I do not think myself permitted to name. It is behind the temple of Minerva, and is continued the whole length of the wall of that building. Around this are many large obelisks, near which is a lake, whose banks are

---

* This is one of the most difficult passages in Herodotus; which, as it perplexed Valaenae, Toupe, and Larcher, may well be supposed to have terrified me.

The following passage from Pococke seems to be as illustrative of the meaning of Herodotus, as any thing I could possibly offer.

The most extraordinary catacombs are towards the further end, and may be reckoned among the finest that have been discovered, being beautiful rooms cut out of a rock, and niches in many of them, so as to deposit the bodies in, adorned with a sort of Doric pilasters on each side. The round room, and that leading to it, are very beautiful, and so are the four rooms with niches.
are lined with stone; it is of a circular form, and, as I should think, as large as that of Delos, which is called Trochôcides.

CLXXI. Upon this lake are represented by night the accidents which happened to him whom I dare not name: the Ægyptians call them their mysteries. Concerning these, at the same time that I confess myself sufficiently informed, I feel myself compelled to be silent. Of the ceremonies also in honour of Ceres, which the Greeks call Thesmophoria, I may not venture to speak, further

294 *Their mysteries.*—How very sacred the ancients deemed their mysteries, appears from the following passage of Apollonius Rhodius:

To Samothrace, Electra's isle, they steer,
That there initiated in rites divine
Safe might they sail the navigable brine.
But, muse, presume not of those rites to tell:
Farewell, dread isle, dire deities, farewell!
Let not my verse those mysteries explain,
To name is impious, to reveal profane.

295 *Thesmophoria.*—These mysteries were celebrated at stated seasons of the year, with solemn shows, and a great pomp of machinery, which drew a mighty concourse to them from all countries. L. Crassus, the great orator, happened to come two days after they were over, and would gladly have persuaded the magistrates to renew them; but not being able to prevail, left the city in disgust. This shews how cautious they were of making them too cheap. The shows are supposed to have represented heaven, hell, ely-
further than the obligations of religion will allow me. They were brought from Ægypt by the daughters of Danaüs, and by them revealed to the Pelasgian women. But when the tranquillity of the Peloponnese was disturbed by the Dorians, and the ancient inhabitants expelled, these

sium, purgatory, and all that related to the future state of the dead: being contrived to inculcate more sensibly, and exemplify the doctrines delivered to the initiated. As they were a proper subject for poetry, so they are frequently alluded to by the ancient poets. This confirms also the probability of that ingenious comment which the author of the Divine Legation has given in the sixth book of the Æneid, where Virgil, as he observes, in describing the descent into hell, is but tracing out in their genuine order the several scenes of the Eleusinian shows.—*Middleton’s Life of Cicero.*

These feasts were celebrated in honour of Ceres, with respect to her character as a lawgiver and agriculturist:

Prima Ceres unco glebam dimovit aratro;
Prima dedit fruges, alimenta que mitia terris;
Prima dedit leges. Ceres sumus omnia munus.

Θεσπίσις, according to Hesychius, signifies a divine law, τὸ μέγα τείνει. The men were not allowed to be present, and only women of superior rank. The sacred books were carried by virgins. According to Ovid, they continued nine days, during which time the women had no connection with their husbands.

Festa piae Ceres celebrabant annua matres
Ilia, quibus nivea velatae corpora veste
Primitias frugum dant spicæa serta suarum:
Perque novem noctes Venerem tactusque viriles
In vetitis numerant.—
these rites were insensibly neglected or forgotten. The Arcadians, who retained their original habi-
tations, were the only people who preserved them.

CLXXII. Such being the fate of Apries, Amasis, who was of the city of Siuph, in the dis-
trict of Sais, succeeded to the throne. At the commencement of his reign, the 'Egyptians, re-
membering his plebeian origin 296, held him in contempt; but his mild conduct and political sagacity afterwards conciliated their affection. Among other valuables which he possessed, was a gold vessel, in which he and his guests were accustomed to spit, make water, and wash their feet: of the materials of this he made a statue of some god, which he placed in the most conspicuous part of the city. The 'Egyptians assembling before it, paid it divine honours: on hearing which, the king called them together, and informed them that the image they thus venerated was made of a vessel of gold, which he and they had formerly used for the most unseemly purposes, He afterwards explained to them the similar

296 Pleöcian origin.]—We are told in Athenæus, that the rise of Amasis was owing to his having presented Apries on his birth-day with a beautiful chaplet of flowers. The king was so delighted with this mark of his attention, that he invited him to the feast, and received him amongst the number of his friends.—T.
similar circumstances of his own fortune, who, though formerly a plebeian, was now their sovereign, and entitled to their reverence. By such means he secured their attachment, as well as their submissive obedience to his authority.

CLXXIII. The same prince thus regulated his time: from the dawn of the day to such time as the public square of the city was filled with people, he gave audience to whoever required it. The rest of the day he spent at the table; where he drank, laughed, and diverted himself with his guests, indulging in every species of licentious conversation. Upon this conduct some of his friends remonstrated:—"Sir," they observed, "do you not dishonour your rank by these excessive and unbecoming levities? From your awful throne you ought to employ yourself in the administration of public affairs, and by such conduct increase the dignity of your name, and the veneration of your subjects. Your present life is most unworthy of a king."

"They," replied Amasis, "who have a bow *, bend

* This is a proverbial expression to be found almost in all languages.

Plutarch has almost verbatim the same saying, in his tract on, Whether the Government ought to be in the Hands of an old Man—το ξύν μεν, ὡς θάνω, επιτευγμένον ρήγματι.
"bend it only at the time they want it; when not in use, they suffer it to be relaxed; it would otherwise break, and not be of service when exigence required. It is precisely the same with a man; if, without some intervals of amusement, he applied himself constantly to serious pursuits, he would imperceptibly lose his vigour both of mind and body. It is the conviction of this truth which influences me in the division of my time."

CLXXIV. It is asserted of this Amasis, that whilst he was in a private condition he avoided every serious avocation, and gave himself entirely up to drinking and jollity. If at any time he wanted money for his expensive pleasures, he had recourse to robbery. By those who suspected him as the author of their loss, he was frequently, on his protesting himself innocent, carried before the oracle, by which he was frequently condemned, and as often acquitted. As soon as he obtained the supreme authority, such deities as had pronounced him innocent, he treated with the greatest contumely, neglecting their temples, and never offering them either presents or sacrifice;

The Italian expression is:
L'Arco si rompe se sta troppo teso. Arcus nimis intensus rumpitur.
Ray has it:—A bow long bent, at last waxeth weak.
sacrifice; this he did by way of testifying his dislike of their false declarations. Such, however, as decided on his guilt, in testimony of their truth and justice he reverenced, as true gods, with every mark of honour and esteem.

CLXXV. This prince erected at Sais, in honour of Minerva, a magnificent portico, exceeding every thing of the kind in size and grandeur. The stones of which it was composed, were of a very uncommon size and quality, and decorated with a number of colossal statues and androsphynges\(^{297}\) of enormous magnitude. To repair this

\(^{297}\) Androsphynges.\)—This was a monstrous figure, with the body of a lion, and face of a man. The artists of \(\text{\AE}g\)ypt, however, commonly represented the sphinx with the body of a lion, and the face of a young woman. These were generally placed at the entrance of temples, to serve as a type of the anigmatical nature of the \(\text{\AE}g\)yptian theology.—Larcrh.

"Les sphinx des \(\text{\AE}g\)yptiens ont les deux sexes, c'est à dire, qu'ils sont femelles par devant, ayant une tête de femme, & males derriere, où les testicules sont apparaantes. C'est une remarque personne n'avoit encore faite:

"Il resulite de l'inspection de quelques monumens que les artistes Grecs donnaient aussi des natures composées a ces êtres mixtes, et qu'ils faiisoint même des sphinx barbus comme le prouve un bas relief en terre cuite, conservé a la Farnesina. Lorsque Herodote nomme les sphinx des androsphynges, il a voulu designer par cette expression la duplicité de leur sexe. Les sphinx qui sont aux quatre faces de la pointe de l'obelisque du soleil, sont remarquables par leur
this temple, he also collected stones of an amazing thickness, part of which he brought from the quarries of Memphis, and part from the city of Elephantine, which is distant from Sais a journey of about twenty days. But what, in my opinion, is most of all to be admired, was an edifice which he brought from Elephantine, constructed of one entire stone. The carriage of it employed two thousand men, all of whom were pilots, for an entire period of three years. The length of this structure on the outside is twenty-one cubits, it is fourteen wide, and eight high; in the inside, the

leur mains d'hommes armées d'ongles crochus, commes les griffes des bêtes féroces."—Winkelmann.

Dr. Pococke observes, that this sphinx is cut out of a solid rock. This extraordinary monument is said to have been the sepulchre of Amasis, though I think it is mentioned by none of the ancient authors, except Pliny.

M. Maillet is of opinion, that the union of the head of a virgin with the body of a lion, is a symbol of what happens in Egypt when the sun is in the signs of Leo and Virgo, and the Nile overflows.—See Norden's Travels.

Opposite the second pyramid, eastward, is the enormous sphinx, the whole body of which is buried in the sand, the top of the back only to be seen, which is above a hundred feet long, and is of a single stone, making part of the rock on which the pyramids rest. Its head rises about seven-and-twenty feet above the sand. Mahomet has taught the Arabs to hold all images of men or animals in detestation, and they have disfigured the face with their arrows and lances.

M. Pauw says, these sphinxes, the body of which is half a virgin, half a lion, are images of the deity, whom they represent as an hermaphrodite.—Savory.
the length of it is twenty-two cubits and twenty
digits, twelve cubits wide, and five high. It is
placed at the entrance of the temple; the reason
it was carried no further is this; the architect,
reflecting upon his long and continued fatigue,
sighed deeply, which incident Amasis construed
as an omen, and obliged him to desist. Some,
however, affirm that one of those employed to
move it by levers, was crushed by it; for which
reason it was advanced no farther.

CLXXVI. To other temples also, Amasis
made many and magnificent presents. At Mem-
phis, before the temple of Vulcan, he placed a
colossal* recumbent figure, which was seventy-
five feet long. Upon the same pediment are two
other colossal figures, formed out of the same
stone, and each twenty feet high. Of the same
size, and in the same attitude, another colossal
statue may be seen at Sais. This prince built
also at Memphis the temple of Isis, the grandeur
of which excites universal admiration.

* The clenched hand of a colossal statue, and not im-
probably of the one which is here actually described, now
adorns the British Museum, and constitutes one of the
British trophies from Egypt. Here again Herodotus was not
believed, but doubtless the principal part of Memphis is
covered up with mud, by the rising of the ground, from
the accumulated inundations; considering the nature of
its situation, this is obvious enough. See Major Rennel on
this subject, who quotes Maillet.
With respect to all those advantages which the river confers upon the soil, and the soil on the inhabitants, the reign of Amasis was auspicious to the Egyptians, who under this prince could boast of twenty thousand cities well inhabited. Amasis is further remarkable for having instituted that law which obliges every Egyptian once in the year to explain to the chief magistrate of his district, the means by which he obtains his subsistence. The refusal

---

293 Twenty thousand cities.]—This country was once the most populous of the known world, and now it does not appear inferior to any. In ancient times it had eighteen thousand as well considerable towns as cities, as may be seen by the sacred registers. In the time of Ptolemy Lagus there were three thousand, which still remain. In a general account once taken of the inhabitants, they amounted to seven millions, and there are no less than three millions at present.—Diodorus Siculus.

Ancient Egypt supplied food to eight millions of inhabitants, and to Italy and the neighbouring provinces likewise. At present the estimate is not one half. I do not think, with Herodotus and Pliny, that this kingdom contained twenty thousand cities in the time of Amasis: but the astonishing ruins everywhere to be found, and in uninhabited places, prove they must have been thrice as numerous as they are.—Samary.

It is impracticable to form a just estimate of the population of Egypt. Nevertheless, as it is known that the number of towns and villages does not exceed two thousand three hundred, and the number of inhabitants in each of them, one with another, including Cairo itself, is not more than a thousand, the total cannot be more than two millions three hundred thousand.—Volney.
refusal to comply with this ordinance, or the not being able to prove that a livelihood was procured by honest means, was a capital offence. This law Solon borrowed from Ægypt, and established at Athens, where it still remains in force, experience having proved its wisdom.

CLXXVIII. This king was very partial to the Greeks, and favoured them upon every occasion. Such as wished to have a regular communication with Ægypt, he permitted to have a settlement at Naucratis. To others, who did not require a fixed residence, as being only engaged in occasional commerce, he assigned certain places for the construction of altars, and the performance of their religious rites. The most spacious and celebrated temple which the Greeks have, they call Hellenium. It was built at the joint expense of the Ionians of Chios, Teos, Phocea, and Clazomenae; of the Dorians of Rhodes, Cnidus, Halicarnassus, and Phaselis; of the Æolians of Mitylene only. Hellenium is the common property of all these cities, who also appoint proper officers for the regulation of their commerce: the claims of other cities to these distinctions

269 This law Solon. — It should rather seem that this law was established at Athens by Draco, and that Solon commuted the punishment of death to that of infamy, against all those who had thrice offended.
tinctions and privileges are absurd and false. The Ἐγινεταῖ, it must be observed, constructed by themselves a temple to Jupiter, as did the Samians to Juno, and the Milesians to Apollo.

CLXXIX. Formerly Naucratis was the sole emporium of Αἴγυπτος; whoever came to any other than the Canopian mouth of the Nile, was compelled to swear that it was entirely accidental, and was, in the same vessel, obliged to go thither*. Naucratis was held in such great estimation, that if contrary winds prevented a passage, the merchant was obliged to move his goods on board the common boats of the river, and carry them round the Delta to Naucratis.

CLXXX. By some accident the ancient temple of Delphi was once consumed by fire, and the Amphictyons voted a sum of three hundred talents to be levied for the purpose of rebuilding it.

* Somewhat similar to this arrangement of the ancient Egyptians with respect to Naucratis, is that of the modern Chinese at present at Canton. This is Major Rennel's opinion. See his excellent work, p. 530.

Perhaps this restriction originated in the same jealousy which in the empire of China limits the trade of Europeans to the port of Canton; and one cannot help remarking how parallel the two cases are in this respect. The Greeks were permitted to have a commercial establishment at Naucratis, and they were allowed places for the construction of temples for their religious rites.
it. A fourth part of this was assigned to the Delphians, who, to collect their quota, went about to different cities, and obtained a very considerable sum from Egypt. Amasis presented them with a thousand talents of alum. The Greeks who resided in Egypt made a collection of twenty minae.

CLXXXI. This king made a strict and amicable confederacy with the Cyrenians; to cement which, he determined to take a wife of that country, either to shew his particular attachment to the Cyrenians, or his partiality to a woman of Greece. She whom he married is reported by some to have been the daughter of Battus, by others of Arcesilæus, or, as some say, of Crito-bulus. She was certainly descended of an honourable family, and her name was Ladice. When the nuptials came to be consummated, the king found himself afflicted with an imbecility which he experienced with no other woman. The continuance

300 Amasis presented them. | Different species of animals were the deities of the different sects among the Egyptians; and the deities being in continual war, engaged their votaries in the same contention. The worshippers of dogs could not long remain in peace with the adorers of cats and wolves. But where that reason took not place, the Egyptian superstition was not so incompatible as is commonly imagined, since we learn from Herodotus, that very large contributions were given by Amasis towards rebuilding the temple of Delphi. — Hume.
continuance of this induced him thus to address his wife: "You have certainly practised some "charm to my injury; expect not therefore to "escape, but prepare to undergo the most cruel "death." When the woman found all expostu- tations ineffectual, she vowed, in the temple of Venus, "that if on the following night her hus- band should be able to enjoy her, she would "present a statue to her at Cyrene." Her wishes were accomplished, Amasis found his vigour restored, and ever afterwards distinguished her by the kindest affection. Ladice performed her vow, and sent a statue to Venus; it has re- mained to my time, and may be seen near the city of Cyrene. This same Ladice, when Cambyses afterwards conquered Ægypt, was, as soon as he discovered who she was, sent back without injury to Cyrene.

CLXXXII. Numerous were the marks of liberality which Amasis bestowed on Greece. To Cyrene he sent a golden statue of Minerva, with a portrait of himself\(^\text{301}\). To the temple of Mi-

\[^{301}\text{Portrait of himself.}^\text{—The art of painting was probably known in Ægypt in the first ages, but they do not seem to have succeeded in this art better than in sculpture. Antiquity does not mention any painter or sculptor of Ægypt, who had acquired celebrity.—Savary.}\]
nerva at Lindus he gave two marble statues, with a
linen corselet, which latter well deserves inspection.

At what period we may venture to fix the origin of
painting, is a subject involved in great difficulty. Perhaps
we are not extravagant in saying, that it was known in the
time of the Trojan war. The following note is to be found
in Servius, Annot. ad Æneid. ii. ver. 392. "Scutis Græ-
corum Neptunus, Trojanorum fuit Minerva depicta."

With respect to the Ægyptians, it is asserted by Tacitus,
that they knew the art of designing before they were ac-
quainted with letters. "Primi per figuras animalium Ægyptii
sensus mentis effingebant et antiquissima monumenta me-
moriae humanæ impressa saxis cernuntur." Annal. lib. x.
cap. 14.

It is ingeniously remarked by Webb, in favour of the anti-
quity of painting, that when the Spaniards first arrived in
America, the news was sent to the emperor in painted ex-
presses, they not having at that time the use of letters.

Mr. Norden says, that in the higher Ægypt to this day
may be seen, amongst the ruins of superb edifices, marbles
artificially stained, so exquisitely fresh in point of colour,
that they seemed recently dismissed from the hand of the
artist. Winkelmann says, that in the Ægyptian mummies
which have been minutely examined, there are apparent the
six distinct colours of white, black, blue, red, yellow, and
green; but these, in point of effect, are contemptible, com-
pared with the columns alluded to above, seen and described
by Norden. Pococke also tells us, that in the ruins of the
palaces of the kings of Thebes, the picture of the king is
painted at full length on stone. Both the sides and ceilings
of the room in which this is to be seen are cut with hiero-
glyphics of birds and beasts, and some of them painted, be-
ing as fresh as if they were but just finished, though they must
be much above two thousand years old.
He presented two figures of himself, carved in wood, to the temple of Juno at Samos; they were placed immediately behind the gates; where they still remain. His kindness to Samos was owing to the hospitality which subsisted between him and Polycrates, the son of Aeax. He had no such motive of attachment to Lindus, but was moved by the report that the temple of Minerva was

The ancient heathens were accustomed to paint their idols of a red colour, as appears from the following extract from the Wisdom of Solomon:

"The carpenter carved it diligently when he had nothing else to do, and formed it by the skill of his understanding, and fashioned it to the image of a man, or made it like some vile beast, laying it over with vermilion, and with paint colouring it red, and covering every spot therein."

It seems rather a far-fetched explanation, to say that this was done because the first statues were set up in memory of warriors, remarkable for shedding much blood. Yet it is so interpreted in Harmer's Observations on Passages of Scripture. Of ancient painting, the relics are indeed but few: but those extolled by Pococke and Norden, and since the period of their travels, by Bruce, who also visited Thebes, and the beautiful specimens which have at different times been dug up at Herculaneum, are sufficient to shew that the artists possessed extraordinary excellence. That in particular of Chiron and Achilles, which many ingenious men have not scrupled to ascribe to Parrhasius, is said to be remarkably beautiful.

30a Hospitality.—That tie among the ancients, which was ratified by particular ceremonies, and considered as the most sacred of all engagements: nor dissolved except with certain solemn forms, and for weighty reasons.
was erected there by the daughters of Danaüs, when they fled from the sons of Ægyptus.—Such was the munificence of Amasis, who was also the first person that conquered Cyprus, and compelled it to pay him tribute.

At the conclusion of the first volume, I inserted an extract from our countryman, Sir Robert Wilson, descriptive of the modern state of the pyramids. I take the opportunity of the conclusion of this book to refer the reader to the French accounts of their modern condition, as given by Denon and Grobert.

Of these, perhaps, neither will be found satisfactory; the first author appeared more desirous to please by his narration, than to instruct the reader; the latter affects scientific description, but will by no means bear the test of careful examination.

Grobert, indeed, gives the number and the height of the steps, but he has omitted to say whether he found the planes of the steps horizontal. It is, therefore, not approaching at all nearer the mark, to give their individual height; as we may reasonably conclude that he did not find the planes horizontal.

After all, Graves appears to afford the greatest satisfaction, as there can be no doubt but he went scientifically about his work. He tells us that the four triangular sides of the great pyramid are equilateral, excepting the plateau on the top, of not many feet. He also affirms that he ascertained the sides of those triangles, and of course the height of the pyramid; and I see no reason to doubt him.

Grobert says that the pyramid is 440. 11. 7. French, which is equal to 470 English feet very nearly. Graves gives 481 feet for the height, and 693 for the sides and diagonal. It is very wonderful that hardly any two persons should have come near each other in their reports of the height and dimensions of the great pyramid. The French had certainly the best opportunities possible, but they do not
not appear to have availed themselves of them. Grobert reports the length of the sides to be equal to $745\frac{2}{3}$ English feet, whilst Graves allows only $693\frac{2}{3}$, making a difference of no less than $52\frac{2}{3}$ feet; which is really astonishing. One cause of variation must necessarily be the difference of foot-measures, which we know sometimes to vary even half an inch in a two-foot rule. Few of these measures possibly vary less than $\frac{1}{20}$ of an inch in a foot; so that this would make a difference in the height, of more than 20 feet. Graves may be supposed to have used every proper measure, and to him I think we must look with most confidence on this subject.
HERODOTUS.

BOOK III.

THALIA.

CHAP. I.

AGAINST this Amasis, Cambyses, the son of Cyrus, led an army, composed as well of his other subjects, as of the Ionic and Æolic Greeks. His inducements were these: by an ambassador whom he dispatched for this purpose into Ægypt, he demanded the daughter of Amasis, which

\[^1\] Thalia.\]—On the commencement of his observations on this book, M. Larcher remarks, that the names of the muses were only affixed to the books of Herodotus at a subsequent and later period. Porphyry does not distinguish the second book of our historian by the name of Euterpe, but is satisfied with calling it the book which treats of the affairs of Ægypt. Athenæus also says, the first or the second book of the histories of Herodotus.

I am nevertheless rather inclined to believe that these names were annexed to the books of Herodotus from the spontaneous impulse of admiration which was excited amongst the first hearers of them at the Olympic games.

According
which he did at the suggestion of a certain Ægyptian who had entertained an enmity against his master. This man was a physician, and when Cyrus had once requested of Amasis, the best medical advice which Ægypt could afford, for a disorder in his eyes, the king had forced him, in preference to all others, from his wife and family, and sent him into Persia. In revenge for which treatment,

According to Pausanias, there were originally no more than three muses; whose names were Μαλης, Μημη&_kappa_e_, and Αιδης. Their number was afterwards increased to nine, their residence confined to Parnassus, and the direction or patronage of them, if these be not improper terms, assigned to Apollo. Their contest for superiority with the nine daughters of Evippe, and consequent victory, is agreeably described by Ovid. Met. book v. Their order and influence seem in a great measure to have been arbitrary. The names of the books of Herodotus have been generally adopted as determinate with respect to their order. This was, however, without any assigned motive, perverted by Ausonius, in the subjoined epigram:

Clio gesta canens, transactis tempora reddit,
Melpomene tragicō proclamat mēsta beatu.
Comica lascivo gaudet sermone Thalia.
Dulciloquos calamos Euterpe flatibus urget.
Terpsichore affectus citharis movet, imperat, auget.
Plectra gerens Erato saltat pede, carmine vultu.
Carmina Calliope libris heroica mandat.
Uranie cæli motus scrutatur et astra.
Signat cuncta manu loquitur Polyhymnia gestu
Mentis Apollincæ vis has movet undique musas
In medio residens complектitur omnia Phœbus.—T.
treatment, this Egyptian instigated Cambyses to require the daughter of Amasis, that he might either suffer affliction from the loss of his child, or, by refusing to send her, provoke the resentment of Cambyses. Amasis both dreaded and detested the power of Persia, and was unwilling to accept, though fearful of refusing, the overture. But he well knew that his daughter was not meant to be the wife but the concubine of Cambyses, and therefore he determined on this mode of conduct: Apries, the former king, had left an only daughter: her name was Nitetis, and she was possessed of much elegance and beauty. The king, having decorated her with great splendour of dress, sent her into Persia as his

2 Nitetis.—Cambyses had not long been king, ere he resolved upon a war with the Egyptians, by reason of some offence taken against Amasis their king. Herodotus tells us it was because Amasis, when he desired of him one of his daughters to wife, sent him a daughter of Apries instead of his own. But this could not be true, because, Apries having been dead above forty years before, no daughter of his could be young enough to be acceptable to Cambyses.—So far Prideaux; but Larcher endeavours to reconcile the apparent improbability, by saying that there is great reason to suppose that Apries lived a prisoner many years after Amasis dethroned him and succeeded to his power; and that there is no impossibility in the opinion that Nitetis might, therefore, be no more than twenty or twenty-two years of age when she was sent to Cambyses.—T.

Jablonski observes that these names of Nitetis, Nitocris, and the like, are derived from Neith, who was the Minerva of the Egyptians.
his own child. Not long after, when Cambyses occasionally addressed her as the daughter of Amasis, "Sir," said she, "you are greatly mis-taken, and Amasis has deceived you; he has adorned my person, and sent me to you as his daughter; but Apries was my father, whom Amasis, with his other rebellious subjects, de-throned and put to death." This speech and this occasion immediately prompted Cambyses in great wrath, to commence hostilities against Ægypt.—Such is the Persian account of the story.

II. The Ægyptians claim Cambyses as their own, by asserting that this incident did not happen to him, but to Cyrus, from whom, and from this daughter of Apries, they say he was born. This, however, is certainly not true. The Ægyptians are of all mankind the best conversant with the

---

3 But to Cyrus.—They speak with more probability, who say it was Cyrus, and not Cambyses, to whom this daughter of Apries was sent.—Prideaux.

4 They say he was born.—Polyænus, in his Stratagemata, relates the affair in this manner:—Nitëtis, who was in reality the daughter of Apries, cohabited a long time with Cyrus as the daughter of Amasis. After having many children by Cyrus, she disclosed to him who she really was; for though Amasis was dead, she wished to revenge herself on his son Psammenitus. Cyrus acceded to her wishes, but died in the midst of his preparations for an Ægyptian war. This, Cambyses was persuaded by his mother to undertake, and revenged on the Ægyptians the cause of the family of Apries.—T.
the Persian manners, and they must have known that a natural child could never succeed to the throne of Persia, while a legitimate one was alive. It was equally certain that Cambyses was not born of an Egyptian woman, but was the son of Cassandane, the daughter of Pharnaspe, of the race of the Achaemenides. This story, therefore, was invented by the Egyptians, that they might from this pretence claim a connection with the house of Cyrus.

III. Another story also is asserted, which to me seems improbable *. They say that a Persian lady once visiting the wives of Cyrus, saw standing near their mother, the children of Cassandane, whom she complimented in high terms on their superior excellence of form and person. "Me," replied Cassandane, "who am the mother of these children, Cyrus neglects and despises; all his kindness is bestowed on this Egyptian female." This she said from resentment against Nitetis. They add that Cambyses, her eldest son, instantly exclaimed, "Mother, as soon as I am a man, I will effect the utter destruction of Egypt." These words, from a prince who

* This story, which Herodotus deems improbable, seems to me much the most likely to be true.

5 I will effect the utter destruction of Egypt.—Literally, I will turn Egypt upside down.

M. Larcher
who was then only ten years of age, surprized
and delighted the women; and as soon as he be-
came a man, and succeeded to the throne, he re-
membered the incident, and commenced hosti-
lities against Ægypt.

IV. He had another inducement to this under-
taking. Among the auxiliaries of Amasis was a
man named Phanes, a native of Halicarnassus,
and greatly distinguished by his mental as well as
military accomplishments. This person being,
for I know not what reason, incensed against
Amasis, fled in a vessel from Ægypt, to have a
conference with Cambyses. As he possessed
great influence among the auxiliaries, and was
perfectly

M. Larcher enumerates, from Athenæus, various and de-
structive wars which had originated on account of women;
he adds, what a number of illustrious families had, from a
similar cause, been utterly extinguished. The impression of
this idea, added to the vexations which he had himself ex-
perienced in domestic life, probably extorted from our great
poet, Milton, the following energetic lines:

Oh, why did God,
Creator wise, that peopled highest heaven
With spirits masculine, create at last
This novelty on earth, this fair defect
Of nature, and not fill the world at once
With men as angels, without feminine,
Or find some other way to generate
Mankind? This mischief had not then befall'n,
And more that shall befall, innumerable
Disturbances on earth through female snares!—T.
perfectly acquainted with the affairs of Egypt, Amasis ordered him to be rigorously pursued, and for this purpose, equipped, under the care of the most faithful of his eunuchs, a three-banked galley. The pursuit was successful, and Phanes was taken in Lydia, but he was not carried back to Egypt, for he circumvented his guards, and by making them drunk effected his escape. He fled instantly to Persia: Cambyses was then meditating the expedition against Egypt, but was deterred by the difficulty of marching an army over the deserts, where so little water was to be procured. Phanes explained to the king all the concerns of Amasis; and to obviate the above difficulty, advised him to send and ask of the king of the Arabs, a safe passage through his territories.

V. This is indeed the only avenue by which Egypt can possibly be entered. The whole country, from Phoenicia to Cadytis*, a city which belongs to the Syrians of Palestine †, and in my opinion

---

* I have in another place supposed this place to be Jerusalem. Wessells thinks not; but my opinion is confirmed by Major Rennel, who gives it as his opinion, that Cadytis is synonymous with Al Kads, which means the holy. See Rennel, p. 683.

† What the Greeks called Palestine, was by the Arabians named Falastin, which certainly is the Philistine of Sacred Scripture.
opinion equal to Sardis, together with all the commercial towns as far as Jenysus, belong to the Arabians. This is also the case with that space of land which extends from the Syrian Jenysus to the lake of Serbonis, from the vicinity of which, mount Casius stretches to the sea. At this lake, where, as was reported, Typhon was concealed, Egypt commences. This tract, which comprehends

—Stephanus Byzantinus calls this city Inys, (for that is manifestly the name he gives it, if we take away the Greek termination): but Herodotus, from whom he borrows, renders it Jenis. It would have been more truly rendered Dorice Janis, for that was nearer to the real name. The historian, however, points it out plainly by saying, that it was three days journey from mount Casius, and that the whole way was through the Arabian desert.—Bryant.

Mr. Bryant is certainly mistaken with respect to the situation of this place. It was an Arabian town, on this side lake Serbonis compared with Syria, on the other compared with Egypt. When Herodotus says that this place was three days journey from mount Casius, he must be understood as speaking of the Syrian side; if otherwise, Cambyses could not have been so embarrassed from want of water, &c.—See Larcher farther on this subject. Jenysus is recognized in the Khan Jones of Thevenot and others, and also in D’Anville. The lake Sarbonis, like the Natron lake, appears to be filled up with sand.

—Mount Casius.—This place is now called by seamen mount Tenere; here anciently was a temple sacred to Jupiter Casius; in this mountain also was Pompey the Great buried, as some affirm, being murdered at its foot. This, however, is not true; his body was burnt on the shore by one of his freedmen, with the planks of an old fishing-boat, and his ashes, being conveyed to Rome, were deposited privately by his wife Cornelia in a vault of his Alban villa.—See Middleton’s Life of Cicero.—T.
comprehends the city Jenysus, mount Casius, and the lake of Serbonis, is of no trifling extent; it is a three days journey over a very dry and parched desert.

VI. I shall now explain what is known to very few of those who travel into Ægypt by sea. Twice in every year there are exported from different parts of Greece to Ægypt, and from Phoenicia in particular, wine secured in earthen jars, not one of which jars is afterwards to be seen. I shall describe to what purpose they are applied: the principal magistrate of every town is obliged to collect all the earthen vessels imported to the place where he resides, and send them to Memphis. The Memphians fill them with water, and afterwards

8 *With water.*—The water of the Nile never becomes impure, whether reserved at home, or exported abroad. On board the vessels which pass from Ægypt to Italy, the water, which remains at the end of the voyage, is good, whilst what they happen to take in during their voyage corrupts. The Ægyptians are the only people we know who preserve this water in jars, as others do wine. They keep it three or four years, and sometimes longer, and the age of this water is with them an increase of its value, as the age of wine is elsewhere.—*Aristides Orot. Ægyptiac.*

Modern writers and travellers are agreed about the excellence of the water of the Nile; but the above assertion, with respect to its keeping, wants to be corroborated. Much the same, however, is said, and universally by mariners, respecting the water of the Thames.
afterwards transport them to the Syrian deserts. Thus all the earthen vessels carried into Aegypt, and there carefully collected, are continually added to those already in Syria.

VII. Such are the means which the Persians have constantly adopted to provide themselves with water in these deserts, from the time that they were first masters of Aegypt. But as, at the time of which I speak, they had not this resource, Cambyses listened to the advice of his Halicarnassian guest, and solicited of the Arabian prince a safe passage through his territories; which was granted, after mutual promises of friendship.

VIII. These are the ceremonies which the Arabsians observe when they make alliances, of which no people in the world are more tenacious. On these

We learn from Diodorus Siculus, b. xix. c. 6, that the people whom he calls Nabatheans preserved rain-water in vessels of earth. These were deposited beneath the earth, and considered as a reservoir from which the water wanted for common use was taken.

9 Tenacious. — How faithful the Arabs are at this day, when they have pledged themselves to be so, is a topic of admiration and of praise with all modern travellers. They who once put themselves under their protection have nothing afterwards to fear; for their word is sacred. Singular as the mode here described of forming alliances may appear to an English reader, that of taking an oath by putting the hand
these occasions some one connected with both parties stands betwixt them, and with a sharp stone opens a vein of the hand, near the middle finger, of those who are about to contract. He then takes a piece of the vest of each person, and dips it in their blood, with which he stains several stones purposely placed in the midst of the assembly, invoking, during the process, Bacchus and Urania. When this is finished, he who solicits the compact to be made, pledges his friends for the sincerity of his engagements to the stranger or citizen, or whoever it may happen to be; and all of them conceive an indispensable necessity to exist, of performing what they promise. Bacchus and Urania are the only deities whom they venerate. They cut off their hair, round their temples, from the supposition that Bacchus wore his

hand under the thigh, in use amongst the patriarchs, was surely not less so.

"Abraham said unto the eldest servant of his house that ruled over all that he had; Put, I pray thee, thy hand under my thigh." Gen. xxiv. 2.—T.

The following interesting anecdote is from Denon:

A French officer had been several months prisoner to a chief of the Arabs, whose camp was surprized in the night by our cavalry, and who had barely time to escape, his tents, cattle, and provisions having fallen into our hands. On the following day, fugitive, solitary, and without any resources, he drew from his pocket a cake, and, presenting the half of it to his prisoner, said to him, "I do not know when we shall have any more food: but I shall not be accused of having refused to share my last morsel with one whom I esteem as my friend."
his in that form; him they call Urotalt; Urania has the name of Alilat 10.

IX. When the Arabian prince had made an alliance with the messengers of Cambyses, he ordered all his camels to be laden with camel-skins filled with water, and to be driven to the deserts, there to wait the arrival of Cambyses and his army: Of this incident, the above seems to me the more probable narrative. There is also another, which however I may disbelieve, I think I ought not to omit. In Arabia is a large river called Corys, which loses itself in the Red Sea: from this river, the Arabian is said to have formed a canal of the skins of oxen and other animals sewed together, which was continued to the above-mentioned deserts, where he also sunk a number of cisterns to receive the water so introduced. From the river to the desert is a journey of twelve days; and they say that the water was conducted by three distinct canals into as many different places *.

10 Alilat.]-According to Selden, in his treatise De Diis Syris, the Mitra of the Persians is the same with the Alitta or Alilat of the Arabians. In this term Alilat we doubtless recognize the ALLAH of the modern Arabians.

* This last account exceeds all possibility of belief. The first drinkable water between the desert here mentioned, and Ægypt, is at Salahiah. This, therefore, is the key of Ægypt on this side, and here, of course, the French established a military post. We have yet to learn what arrangements were made by Bonaparte to obtain water in crossing the desert. But the task must be much easier from the side of Ægypt, than from that of Syria.
X. At the Pelusian mouth of the Nile, Psammenitus, the son of Amasis, was encamped, and expected Cambyses in arms. Amasis himself, after a reign of forty-four years, died before Cambyses had advanced to Egypt, and during the whole enjoyment of his power, he experienced no extraordinary calamity. At his death his body was embalmed, and deposited in a sepulchre which he had erected for himself in the temple of Minerva. During the reign of his son Psammenitus, Egypt beheld a most remarkable prodigy; there was rain at the Egyptian Thebes, a circumstance which never happened before, and which, as the Thebans themselves assert, has never occurred since. In the higher parts of Egypt it never rains, but at that period we read it rained at Thebes in distinct drops.

11 Temple of Minerva.]—Minerva is not expressed in the original text, but it was evident that it is in the temple of Minerva, from chap. clxix. of the second book.—T.

12 In distinct drops.]—Herodotus is perhaps thus particular, to distinguish rain from mist.

Denon, when in the neighbourhood of Lycopolis, thus expresses himself:

We found several roads marked out, which convinced us that they might with a very little expense be made excellent, and most completely durable, in a country like this, where neither rain or frost are ever seen.

It is a little remarkable that all the mention which Herodotus makes of the ancient Thebes, is in this passage, and in this slight manner. In book ii. chap. xv. he informs us that all Egypt was formerly called Thebes.—T.
XI. The Persians having passed the deserts, fixed their camp opposite to the Ægyptians, as if with the design of offering them battle. The Greeks and Carians, who were the confederates of the Ægyptians, to shew their resentment against Phanes, for introducing a foreign army against Ægypt, adopted this expedient: they brought his sons, whom he had left behind, into the camp, and in a conspicuous place, and in the sight of their father, they put them one by one to death upon a vessel brought thither for that purpose. When they had done this, they filled the vase which had received the blood with wine and water; having drank which

^13 Having drank which.]—They probably swore at the same time to avenge the treason of Phanes, or perish. The blood of an human victim mixed with wine accompanied the most solemn forms of execration among the ancients. Catiline made use of this superstition to blind his adherents to secrecy: "He carried round," says Sallust, "the blood of an human victim, mixed with wine; and when all had tasted it, after a set form of execration (sicut in solemnibus sacris fieri consuevit) he imparted his design."—T.

Xenophon describes the ceremonies observed by the Greeks and Persians on their agreeing to become allies and friends. They sacrificed a boar, a bull, a wolf, and a ram; they mixed their blood together in the hollow part of a shield, after which the Persians dipped a spear into it, and the Greeks a sword. See the Anabasis, b. ii. A very extraordinary form of oath is described in Ysbrant Ide's Voyage from Russia to China. Arriving among the Tungusian Tartars,
auxiliaries immediately engaged the enemy. The battle was obstinately disputed, but after considerable loss on both sides, the Ægyptians fled.

XII. By the people inhabiting the place where this battle was fought, a very surprizing thing was pointed out to my attention. The bones of those who fell in the engagement were soon afterwards collected, and separated into two distinct heaps. It was observed of the Persians, that their heads were so extremely soft as to yield to the slight impression even of a pebble; those of the Ægyptians, on the contrary, were so firm, that the blow of a large stone could hardly break them.
them. The reason which they gave for this was very satisfactory—the Egyptians from a very early age shave their heads, which by being constantly exposed to the action of the sun, become firm and hard; this treatment also prevents baldness, very few instances of which are ever to be seen in Egypt. Why the skulls of the Persians are so soft may be explained from their being from their infancy accustomed to shelter them from the sun, by the constant use of turbans. I made the very same remark at Papremis, after examining the bones of those who, under the conduct of Achaemenes, son of Darius, were defeated by Inaros the African.

XIII. The Egyptians after their defeat fled in great disorder to Memphis. Cambyses dispatched

14 Shave their heads.]—The same custom still subsists: I have seen every where the children of the common people, whether running in the fields, assembled round the villages, or swimming in the waters, with their heads shaved and bare. Let us but imagine the hardness a skull must acquire thus exposed to the scorching sun, and we shall not be astonished at the remark of Herodotus.—Savary.

15 Achaemenes.]—Herodotus and Diodorus Siculus say, that it was Achaemenes, the brother of Xerxes, and uncle of Artaxerxes, the same who before had the government of Egypt in the beginning of the reign of Xerxes, that had the conduct of this war; but herein they were deceived by the similitude of names; for it appears by Ctesias, that he was the son of Hamestris, whom Artaxerxes sent with his army into Egypt.—Prideaux.
patched a Persian up the river in a Mitylenian vessel to treat with them; but as soon as they saw the vessel enter Memphis, they rushed in a crowd from the citadel, destroyed the vessel, tore the crew in pieces 16, and afterwards carried them into the citadel. Siege was immediately laid to the place, and the Ægyptians were finally compelled to surrender. Those Africans who lived nearest to Ægypt, apprehensive of a similar fate, submitted without contest, imposing a tribute on themselves, and sending presents to the Persians. Their example was followed by the Cyreneans and Barceans, who were struck with the like panic. Cambyses received the African presents very graciously, but he expressed much resentment at those of the Cyreneans, as I think, on account of their meanness. They sent him five hundred minæ of silver, which, as soon as he received, with his own hands he threw amongst his soldiers.

XIV. On the tenth day after the surrender of the citadel of Memphis, Psammenitus, the Ægyptian king, who had reigned no more than six months,

16 Tore the crew in pieces.]—They were two hundred in number; this appears from a following paragraph, where we find that for every Mitylenian massacred on this occasion ten Ægyptians were put to death, and that two thousand Ægyptians thus perished.—Larcher.
months, was by order of Cambyses ignominiously conducted, with other Ægyptians, to the outside of the walls, and by way of trial of his disposition, thus treated: His daughter, in the habit of a slave, was sent with a pitcher to draw water; she was accompanied by a number of young women clothed in the same garb, and selected from families of the first distinction. They passed, with much and loud lamentation, before their parents, from whom their treatment excited a correspondent violence of grief. But when Psammenitus beheld the spectacle, he merely declined his eyes upon the ground; when this train was gone by, the son of Psammenitus, with two thousand Ægyptians of the same age, were made to walk in procession, with ropes round their necks, and bridle's in their mouths. These were intended to avenge the death of those Mitylenians who, with their vessel, had been torn to pieces at Memphis. The king's counsellors had determined that for every one put to death on that occasion, ten of the highest rank of the Ægyptians should be sacrificed. Psammenitus observed these as they passed, but although he perceived that his son was going to be executed, and whilst all the Ægyptians around him wept and lamented aloud, he continued unmoved as before. When this scene also disappeared, he beheld a venerable personage, who had formerly partaken of the royal table, deprived of all he had possessed,
sessed, and in the dress of a mendicant asking charity through the different ranks of the army. This man stopped to beg an alms of Psammenitus, the son of Amasis, and of the other noble Ægyptians who were sitting with him; which when Psammenitus beheld, he could no longer suppress his emotions, but calling on his friend by name, wept aloud '17, and beat his head. This the spies, who were placed near him to observe his conduct on each incident, reported to Cambyses; who, in astonishment at such behaviour, sent a messenger, who was thus directed to address him, "Your lord and master, Cambyses, "is desirous to know why, after beholding with "so much indifference your daughter treated as "a slave, and your son conducted to death, you "expressed so lively a concern for that mendic-

''Wept aloud.]—A very strange effect of grief is related by Mr. Gibbon, in the story of Gelimer, king of the Vandals, when after an obstinate resistance he was obliged to surrender himself to Belisarius. "The first public interview," says our historian, "was in one of the suburbs of Carthage; and when the royal captive accosted his conqueror, he burst into a fit of laughter. The crowd might naturally believe that extreme grief had deprived Gelimer of his senses; but in this mournful state unseasonable mirth insinuated to more intelligent observers that the vain and transitory scenes of human greatness are unworthy of a serious thought." All that can be said in answer to Gibbon's remark is, that Psammenitus acted like a man; Gelimer like a barbarian idiot.
"can't, who, as he has been informed, is not at all related to you?" Psammenitus made this reply: "Son of Cyrus, my domestic misfortunes were too great to suffer me to shed tears; but it was consistent that I should weep for my friend, who, from a station of honour and of wealth, is in the last stage of life reduced to penury." Cambyses heard and was satisfied with his answer. The Egyptians say that Cræsus, who attended Cambyses in this Egyptian expedition, wept at the incident*. The Persians also who

18 Shed tears.]—This idea of extreme affliction or anger tending to check the act of weeping, is expressed by Shakespeare with wonderful sublimity and pathos. It is part of a speech of Lear:

You see me here, ye gods, a poor old man,
As full of grief as age, wretched in both.
If it be you that stir these daughters hearts
Against their father, fool me not so much
To bear it tamely: Touch me with noble anger,
And let not women's weapons, water drops,
Stain my man's cheeks. No, you unnatural hags,
I will have such revenges on you both
That all the world shall—I will do such things,
What they are yet I know not, but they shall be
The terrors of the earth.—You think I'll weep—
No, I'll not weep. I have full cause of weeping;
But this heart shall break into a hundred thousand flaws
Or e'er I weep.

* It might have been reasonably supposed that the lessons which Cambyses had immediately before him, would have inspired his heart with some sentiments of humanity, and afforded him a warning of the fallability of human greatness.

The
who were present were exceedingly moved, and Cambyses himself yielded so far to compassion, that he ordered the son of Psammenitus to be preserved out of those who had been condemned to die, and Psammenitus himself to be conducted from the place where he was, to his presence.

XV. The emissaries employed for the purpose found the young prince had suffered first, and was already dead; the father, they led to Cambyses, with whom he afterwards lived, and received no farther ill-treatment; and, could he have refrained from ambitious attempts, would probably have been intrusted with the government of Ægypt. The Persians hold the sons of sove-reigns in the greatest reverence, and even if the fathers revolt, they will permit the sons to succeed to their authority; that such is really their conduct may be proved by various examples. Thanyras the son of Inarus 19, received the kingdom which

The degradation of Crœsus, and the miserable end of his father Cyrus, might have suggested some disposition to pity, and some warning of the policy of forbearance. But it must be remembered, that the salutary influence of christianity was then unknown, and the emotions of false pride and false ambition had no check from the idea of a state of future retribution.

19 Inarus.—The revolt of Inarus happened in the first year of the 80th Olympiad, 460 before the Christian æra. He rebelled against Artaxerxes Longimanus, and with the assistance
which his father governed; Pausiris also, the son of Amyrtæus, was permitted to reign after his father, although the Persians had never met with more obstinate enemies than both Inarus and Amyrtæus. Psammenitus revolted, and suffered for his offence: he was detected in stirring up the Egyptians to rebel; and being convicted by Cambyses, was made to drink a quantity of bullock's blood, which immediately occasioned his death.—Such was the end of Psammenitus.*

assistance of the Athenians defied the power of Persia for nearly five years. After he was reduced, Amyrtæus held out for some time longer in the marshy country.—The particulars may be found in the first book of Thucydides, chap. civ. &c.

*Bullock's blood.]—Bull's blood, taken fresh from the animal, was considered by the ancients as a powerful poison, and supposed to act by coagulating in the stomach. Themistocles, and several other personages of antiquity, were said to have died by taking it.—See Plut. in Themist. and Pliny, book xxviii. ch. ix. Aristophanes, in the *Iπτικ*, alludes to this account of the death of Themistocles.

Βέλτιστον ὄμισα αἰμα ταύρου πιεῖν
Ο Θαμισκϊλβος γαρ βαῦνας αἰθουτερος.

*I cannot deny myself the satisfaction of transcribing the substance of Larcher's remarks on this chapter.

The following expressions concerning Ἑgypt occur in Ezekiel, c. xxx. v. 13.

"Thus saith the Lord God; I will also destroy the idols, and I will cause their images to cease out of Noph; and there shall be no more a prince of the land of Ἑgypt: and I will put a fear in the land of Ἑgypt."

This prophecy, observes Larcher, has been literally fulfilled.
XVI. From Sais, Cambyses proceeded to Memphis, to execute a purpose he had in view. As soon as he entered the palace of Amasis, he ordered the body of that prince to be removed from his tomb. When this was done, he commanded it to be beaten with rods, the hair to be plucked out, and the flesh to be goaded with sharp instruments, to which he added other marks of ignominy. As the body was embalmed, their efforts made but little impression; when therefore they were fatigued with these outrages, he ordered it to be burned. In this last act, Cambyses paid no regard to the religion of his country, for the Persians venerate fire as a divinity. The

filled. Ægypt, on the death of Psammenitus, passed under the dominion of the Persians. The Greeks afterwards subdued it, and after them the Romans. The Arabians conquered it from the Romans, and after the Arabians, the Saracens and Mamelukes have had possession of it.

The authority of the Grand Signior is merely nominal; for, on the invasion of the French, it was governed by the Beys.

In addition to Larcher's remarks, it may now be observed, that the present condition of Ægypt exhibits a still more literal fulfilment of Ezekiel's prediction.

21 Venerate fire as a divinity.—This expression must not be understood in too rigorous a sense. Fire was certainly regarded by the Persians as something sacred, and perhaps they might render it some kind of religious worship, which in its origin referred only to the deity of which this element was an emblem. But it is certain that this nation did not believe fire to be a deity, otherwise how would they have dared to have extinguished it throughout Persia, on the death
The custom of burning the dead does not prevail in either of the two nations; for the reason above mentioned, the Persians do not use it, thinking it profane to feed a divinity with human carcases; and the Ægyptians abhor it, being fully persuaded that fire is a voracious animal, which devours whatever it can seize, and when saturated finally expires with what it has consumed. They hold it unlawful to expose the bodies of the dead to any animals, for which reason the death of the sovereign, as we learn from Diodorus Siculus? —See an epigram of Dioscorides, Brunk's Analecta, vol. i. 503.—Larcher.

According to Diodorus Siculus, the Ægyptians venerated fire as a divinity, under the name of Hephaistus. His words are these: "The Ægyptians considered fire, to which they gave the name of Hephaistus, as a Greek deity (μεγάλος θεός)."

It was one of the distinctions of the Persian sovereigns to have fire carried before them on an altar. This custom was borrowed by the Romans of the Persians, and accordingly we find that the Roman Emperors had fire carried before them. There is a dissertation on this ancient custom in the Memoires de l'Academie des Belles Lettres, v. xxxi. p. 155.

 Bodies of the dead.]—We learn from Xenophon, that the interment of bodies was common in Greece; and Homer tells us that the custom of burning the dead was in use before the Trojan war. It is therefore probable that both customs were practised at the same time; this was also the case at Rome, as appears from many ancient monuments: the custom, however, of interment, seems to have preceded that of burning. "At mihi quidem antiquissimum sepulturae genus id fussisse videtur quo apud Xenophontem Cyrus utitur. Red-
reason they embalm them, fearing lest, after interment, they might become the prey of worms*. The Egyptians assert, that the above indignities were not inflicted upon the body of Amasis, but that

ditur enim terræ corpus et ita locatum et situm quasi operimento matris obducitur."—Cicero de legibus, lib. ii. 22.

"That seems to me to have been the most ancient kind of burial, which, according to Xenophon, was used by Cyrus. For the body is returned to the earth, and so placed as to be covered with the veil of its mother." The custom of burning at Rome, according to Montfaucon, ceased about the time of Theodosius the younger.

Sylla was the first of the Cornelian family whose body was burnt, whence some have erroneously advanced that he was the first Roman; but both methods are mentioned in the laws of the twelve tables, and appear to have been equally prevalent. After Sylla, burning became general.—T.

* The ancients had great horror at the idea of not receiving the rites of burial.

When Ulysses visited the infernal regions, he is made to say:

There, wandering thro' the gloom, I first survey'd,
New to the realms of death, Elpenor's shade;
His cold remains, all naked to the sky,
On distant shores, unwept, unburied lie.

The ghost implores of Ulysses the rites of sepulture, in these pathetic strains:

But lend me aid, I now conjure thee lend,
By the soft tie and sacred name of friend;
By thy fond consort, by thy father's cares,
By loved Telemachus's blooming years.

The tribute of a tear is all I crave,
And the possession of a peaceful grave.
that the Persians were deceived, and perpetrated these insults on some other Ægyptian of the same age with that prince. Amasis, they say, was informed by an oracle of the injuries intended against his body, to prevent which he ordered the person who really sustained them, to be buried at the entrance of his tomb, whilst he himself, by his own directions given to his son, was placed in some secret and interior recess of the sepulchre. These assertions I cannot altogether believe, and am rather inclined to impute them to the vanity of the Ægyptians.

XVII. Cambyses afterwards determined to commence hostilities against three nations at once, the Carthaginians, the Ammonians, and the Macrobian* Æthiopians, who inhabit that part of Lybia which lies towards the southern ocean. He accordingly resolved to send against the Carthaginians a naval armament; a detachment of his troops was to attack the Ammonians by land; and he sent spies into Æthiopia, who, under pretence of carrying presents to the prince, were to ascertain the reality of the celebrated table of the sun\textsuperscript{23}, and to examine the condition of the country.

\textsuperscript{* i. e. long-lived.}
\textsuperscript{23} Table of the sun.]—Solinus speaks of this table of the sun as something marvellous, and Pomponius Mela seems to have
XVIII. What they called the table of the sun was this:—A plain in the vicinity of the city was filled to the height of four feet with the roasted flesh of all kinds of animals, which was carried there in the night, under the inspection of the magistrates; during the day whoever pleased was at liberty to go and satisfy his hunger. The natives of the place affirm, that the earth spontaneously produces all these viands: this, however, is what they term the table of the sun.

XIX. As soon as Cambyses had resolved on the measures he meant to pursue, with respect to the Æthiopians, he sent to the city of Elephantine for some of the Ichthyophagi who were skilled in their language. In the mean time he directed his naval forces to proceed against the Carthaginians; but the Phœnicians refused to assist him in this purpose, pleading the solemnity of their

have had the same idea. Pausanias considers what was reported of it as fabulous. "If," says he, "we credit all these marvels on the faith of the Greeks, we ought also to receive as true what the Æthiopians above Syene relate of the table of the sun." In adhering to the recital of Herodotus, a considerable portion of the marvellous disappears. —Larcher.

The explanation of Vossius may be admitted. As the light of the sun was for the common benefit of mankind, so was this table for the benefit of all the Æthiopians. It seems very probable that the well-known fable of the gods going to visit the Æthiopians for twelve days, had its origin in the sacrifice to the sun, which is here recorded.
their engagements with that people, and the impiety of committing acts of violence against their own descendants.—Such was the conduct of the Phœnicians, and the other armaments were not powerful enough to proceed. Thus, therefore, the Carthaginians escaped being made tributary to Persia, for Cambyses did not choose to use compulsion with the Phœnicians, who had voluntarily become his dependants, and who constituted the most essential part of his naval power. The Cyprians had also submitted without contest to the Persians, and had served in the Ægyptian expedition.

XX. As soon as the Ichthyophagi* arrived from Elephantine, Cambyses dispatched them to Æthiopia. They were commissioned to deliver, with certain presents, a particular message to the prince. The presents consisted of a purple vest, a gold chain for the neck, bracelets, an alabaster box of perfumes‡, and a cask of palm wine†. The Æthiopians to whom Cambyses sent, are reported

* The Ichthyophagi are not distinctly marked in ancient writers. There were people thus denominated in Gadrasia, as well as on the coasts of Arabia and Africa. See Vincent's Periplus.

‡ Alabaster box of perfumes.]—It seems probable that perfumes in more ancient times were kept in shells. Arabia is the country of perfumes, and the Red Sea throws upon the coast

† For this note, see the next page.
reported to be superior to all other men in the perfections of size and beauty: their manners and
cost a number of large and beautiful shells, very convenient for such a purpose.—See Horace:

Funde capacibus
Unguenta de conchis.

That to make a present of perfumes was deemed a mark of reverence and honour in the remotest times amongst the Orientals, appears from the following passage in Daniel:

"Then the king Nebuchadnezzar feli upon his face, and worshipped Daniel, and commanded that they should offer an oblation and sweet odours to him."

This offering to Daniel is considered by some as a sacrifice to a deity.

See also St. Mark, xiv. 3:

"There came a woman having an alabaster box of ointment of spikenard, very precious; and she brake the box, and poured it on his head."

See also Matth. xxvi. 7.

To sprinkle the apartments and the persons of the guests with rose-water, and other aromatics, still continues in the East to be a mark of respectful attention.

Alabastron did not properly signify a vessel made of the stone now called alabaster, but one without handles, μὴ τὴν κυλύς

Alabaster obtained its name from being frequently used for this purpose; the ancient name for the stone was alabastrites, and perfumes were thought to keep better in it than in any other substance. Pliny has informed us of the shape of these vessels, by comparing to them the pearls called clenchi, which are known to have been shaped like pears, or, as he expresses it, fastigiatā longitudine, alastrorum figura, in pleniorem orbem desinentes; lib. ix., cap. 35.—T.

† Palm wine.]—Larcher observes that Herodotus no where
and customs, which differ also from those of all other nations, have, besides, this singular distinction; the supreme authority is given to him who excels all his fellow citizens in size and proportionable strength.

XXI. The Ichthyophagi on their arrival offered the presents, and thus addressed the king: "Cambyses, sovereign of Persia, from his anxious desire of becoming your friend and ally, has sent us to communicate with you, and to desire your acceptance of these presents, from the use of which he himself derives the greatest pleasure." The Æthiopian prince, who was aware of the object they had in view, made them this answer:—"The king of Persia has not sent you with these presents, from any desire of obtaining

distinguishes the different wines he mentions by the name of the places which produced them, but the articles of which they are made. Thus, in the second book, he speaks of wine of barley; in the fourth book, of wine of the lotos, wine of the vine, and wine of palms, dates, &c.; which latter wine is at this day the ordinary beverage of the Orientals.

25 Who excels all his fellow citizens, &c.]—That the quality of strength and accomplishments of person were, in the first institution of society, the principal recommendations to honour, is thus represented by Lucretius:

Condere cœperunt urbeis, arcemque locare
Præsidium reges ipsi sibi perfugiumque:
Et pecudes et agros divisere atque dedere
Pro facie cujusque, et viribus ingenioque
Nam facies multum valuit, viresque vigeabant. T.
taining my alliance; neither do you speak the "truth, who, to facilitate the unjust designs of "your master, are come to examine the state of "my dominions: if he were influenced by prin-
ciples of integrity, he would be satisfied with "his own, and not covet the possessions of "another; nor would he attempt to reduce those "to servitude from whom he has received no in-
jury. Give him therefore this bow, and in my "name speak to him thus: The king of Æthi-
opia sends this counsel to the king of Persia— 
when his subjects shall be able to bend this "bow with the same ease that I do, then with a "superiority of numbers he may venture to attack "the Macrobian Æthiopians. In the mean time "let him be thankful to the gods, that the Æthi-
opians have not been inspired with the same "ambitious views of extending their posses-
sions."

XXII. When he had finished, he unbent the bow *, and placed it in their hands; after which, taking

* It is surprizing to see how much Mr. Bruce talks at ran-
dom on the subject of this historical anecdote; in all of which, these two words of Herodotus refute him.

Bruce tells a long story of a custom of the Shangallas, whom he will call the Macrobiians, which consisted in hang-
ing upon their bows a ring from the skins of the different animals they kill, till the bow entirely loses its elasticity, and cannot
taking the purple vest, he inquired what it was, and how it was made: the Ichthyophagi properly explained to him the process by which the purple tincture was communicated; but he told them that they and their vests were alike deceitful. He then made similar inquiries concerning the bracelets and the gold chains for the neck: upon their describing the nature of those ornaments, he laughed, and conceiving them to be chains, remarked,

cannot be used. It was one of these inflexible bows, says he, which the Ἐθιοπικὸς πρίγις sent to Cambyses. Instead of this, Herodotus says, "the prince unbent the bow," &c. &c.

I can hardly wonder that Larcher should speak of Bruce with such severity, having had myself frequent occasion to reproach him with haste and inaccuracy.

[Conceiving them to be chains.]—We learn from a passage in Genesis, xxiv. 22, that the bracelets of the Orientals were remarkably heavy; which seems in some measure to justify the sentiment of the Ἐθιοπικός πρίγις, who thought them chains simply because they were made of gold, which was used for that purpose in his country.—See chap. xxiii.

"And it came to pass as the camels had done drinking, that the man took a golden ear-ring of half a shekel weight, and two bracelets for her hands, of ten shekels weight of gold."

That the bracelet was formerly an ensign of royalty amongst the Orientals, Mr. Harmer, in his Observations on Passages of Scripture, infers from the circumstance of the Amalekite's bringing to David the bracelet which he found on Saul's arm, along with his crown. That it was a mark of dignity there can be little doubt; but it by no means follows that it was a mark of royalty, though the remark is certainly ingenious.
remarked, that the Æthiopians possessed much stronger. He proceeded lastly to ask them the use of the perfumes; and when they informed him how they were made and applied, he made the same observation as he had before done of the purple robe. When he came to the wine, and ingenious. If it was, there existed a peculiar propriety in making it the part of a present from one prince to another. By the Roman generals they were given to their soldiers, as a reward of bravery. Small chains were also in the remotest times worn round the neck, not only by women but by the men. That these were also worn by princes, appears from Judges, viii. 26.

"And the weight of the golden car-rings that he requested, was a thousand and seven hundred shekels of gold; beside ornaments, and collars, and purple raiment that was on the kings of Midian; and beside the chains that were about their camels' necks." Which last circumstance tends also to prove that they thus also decorated the animals they used; which fashion is to this day observed by people of distinction in Egypt.—T.

27 Purple robe.]—It is a circumstance well known at present, that on the coast of Guagaquil, as well as on that of Guatima, are found those snails which yield the purple dye so celebrated by the ancients, and which the moderns have supposed to have been lost. The shell that contains them is fixed to rocks that are watered by the sea; it is of the size of a large nut. The juice may be extracted from the animal in two ways; some persons kill the animal after they have taken it out of the shell, they then press it from the head to the tail with a knife, and, separating from the body that part in which the liquor is collected, they throw away the rest. When this operation, repeated upon several of the snails, hath yielded a certain quantity of the juice, the thread that
and learned how it was made, he drank it with particular satisfaction; and inquired upon what food the Persian monarch subsisted, and what was the longest period of a Persian's life. The king, they told him, lived chiefly upon bread; and they then described to him the properties of corn: they added, that the longest period of life in Persia was about eighty years. "I am not at all surprized," said the Æthiopian prince, "that, subsisting on dung, the term of life is so short among them; and unless," he continued, pointing to the wine, "they mixed it with this liquor, they would not live so long:" for in this he allowed that they excelled the Æthiopians.

XXIII. The Ichthyophagi in their turn questioned the prince concerning the duration of life in Æthiopia, and the kind of food there in use: They were told, that the majority of the people lived to the age of one hundred and twenty years, but that some exceeded even that period; that their

is to be dyed is dipped in it, and the business is done. The colour, which is at first as white as milk, becomes afterwards green, and does not turn purple till the thread is dry.

We know of no colour that can be compared to the one we have been speaking of, either in lustre or in permanency.—Raynal.

Pliny describes the purpura as a turbinated shell like the buccinum, but with spines upon it; which may lead us to suspect the Abbé's account of the snails of a little inaccuracy.—T.
their meat was baked flesh*, their drink milk. When the spies expressed astonishment at the length of life in Æthiopia, they were conducted to a certain fountain, in which having bathed, they became shining as if anointed with oil, and emitted from their bodies the perfume of violets†. But they asserted that the water of this fountain was of so insubstantial a nature, that neither wood, nor any thing still lighter than wood, would float upon its surface, but every thing instantaneously sunk to the bottom. If their representation of this water was true, the constant use of it may probably explain the extreme length of life which the Æthiopians attain. From the fountain they were conducted to the public

* This is the second place in which Herodotus asserts that these Æthiopians lived on baked or roasted flesh; nevertheless, Bruce, with his accustomed carelessness and inaccuracy, affirms, as if from our historian, that they lived on raw flesh, which, he adds, they continue to do to this very day.

† Cada Mosto, who made a voyage to Senegal in the year 1455, affirms that the natives made use of a certain oil in the preparation of their victuals, which possessed a threefold property; that of smelling like violets, tasting like oil of olives, and of tinging the victuals with a colour more beautiful than saffron. The present inhabitants of this part of Africa extract an oil from the kernels of the palm-nuts; this is used for the same purposes as the palm-oil, but, as Dr. Winterbottom observes, more nearly resembles butter, as it has no smell.
public prison, where all that were confined were secured by chains of gold; for among these Æthiopians, brass is the rarest of all the metals. After visiting the prison they saw also what is called the table of the sun.

XXIV. Finally they were shewn the Æthiopian coffins, which are said to be constructed of

28 Coffins.]—Coffins, though anciently used in the East, and considered as marks of distinction, are not now there applied to the dead either by Turks or Christians.

"With us," says Mr. Harmer, in his Observations on Passages of Scripture, "the poorest people have their coffins: if the relations cannot afford them, the parish is at the expense. In the East, on the contrary, they are not now at all made use of. Turks and Christians, Thevenot assures us, agree in this. The ancient Jews probably buried their dead in the same manner: neither was the body of our Lord, it should seem, put into a coffin, nor that of Elisha, whose bones were touched by the corpse that was let down a little after into his sepulchre; 2 Kings, xiii. 21. That they, however, were anciently made use of in Ægypt, all agree; and antique coffins, of stone and sycamore wood, are still to be seen in that country, not to mention those said to be made of a kind of paste-board, formed by folding and glueing cloth together a great number of times, which were curiously plaistered, and then painted with hieroglyphics. Its being an ancient Ægyptian custom, and its not being used in the neighbouring countries, were doubtless the cause that the sacred historian expressly observes of Joseph, that he was not only embalmed, but put into a coffin too, both being managements peculiar in a manner to the Ægyptians."

Mr.
of crystal, and in this manner:—After all the moisture is exhausted from the body, by the Egyptian

Mr. Harmer's observation in the foregoing note is not strictly true. The use of coffins might very probably be unknown in Syria, from whence Joseph came; but that they were used by all nations contiguous on one side at least to Egypt, the passage before us proves sufficiently. I have not been able to ascertain at what period the use of coffins was introduced in this country, but it appears from the following passage of our celebrated antiquary, Mr. Strutt, that from very remote times our ancestors were interred in some kind of coffin. "It was customary in the Christian burials of the Anglo Saxons to leave the head and shoulders of the corpse uncovered till the time of burial, that relations, &c. might take a last view of their deceased friend." We have also the following in Durant, "Corpus totum at sudore obvolutum ac loculo conditum veteres in caenaculis, seu tricliniiis exponebant."

We learn from a passage in Strabo, that there was a temple at Alexandria, in which the body of Alexander was deposited, in a coffin of gold; it was stolen by Seleucus Cybiosactes, who left a coffin of glass in its place. This is the only author, except Herodotus, in whom I can remember to have seen mention made of a coffin of glass. The urns of ancient Rome, in which the ashes of the dead were deposited, were indifferently made of gold, silver, brass, alabaster, porphyry, and marble; these were externally ornamented according to the rank of the deceased. A minute description of these, with a multitude of specimens, may be seen in Montfaucon.—T.

On the subject of the leaden coffins of the Saxons, see Gough's Sepulchral Monuments of Great Britain; Introduction, p. 11.

One reason for not having coffins in the East, may be the quickness of interment, and the cool retreats in which the bodies were deposited, at a distance from the towns.
Egyptian or some other process, they cover it totally with a kind of plaster, which they adorn with various colours, and make it exhibit as near a resemblance as may be, of the person of the deceased. They then inclose it in a hollow pillar of crystal, which is dug up in great abundance, and of a kind that is easily worked. The deceased is very conspicuous through the crystal, has no disagreeable smell, nor any thing else that is offensive. The nearest relations keep this coffin for a twelvemonth in their houses, offering before it different kinds of victims, and the first-fruits of their lands; these are afterwards removed and set up round the city.

XXV. The spies, after executing their commission, returned; and Cambyses was so exasperated at their recital, that he determined instantly to proceed against the Ethiopians, without ever providing for the necessary sustenance of

---

29 Pillar of crystal.---"Our glass," says M. Larcher, "is not the production of the earth, it must be manufactured with much trouble." According to Ludolf, they find in some parts of Ethiopia large quantities of fossil salt, which is transparent, and which indurates in the air: this is perhaps what they took for glass.

We have the testimony of the Scholiast on Aristophanes, that ἵαλος, though afterwards used for glass, signified antiently crystal: as therefore Herodotus informs us that this substance was digged from the earth, why should we hesitate to translate it crystal?—T.
of his army, or reflecting that he was about to visit the extremities of the earth. The moment that he heard the report of the Ichthyophagi, like one deprived of all the powers of reason, he commenced his march with the whole body of his infantry, leaving no forces behind but such Greeks as had accompanied him to Ægypt. On his arrival at Thebes, he selected from his army about fifty thousand men, whom he ordered to make an incursion against the Ammonians, and to burn the place from whence the oracles of Jupiter were delivered: he himself, with the remainder of his troops, marched against the Æthiopians. Before he had performed a fifth part* of his intended expedition, the provisions he had with him were totally consumed. They proceeded to eat the beasts which carried the baggage, till these also failed. If after these incidents Cambyses had permitted his passions to cool, and had led his army back again, notwithstanding his indiscretion, he still might have deserved praise. Instead of this, his infatuation continued, and he proceeded on his march. The soldiers, as long as

* Thus it appears that Cambyses never penetrated beyond the desert of Selima, that is, says Rennel, on the supposition that he set out from Thebes, and that Sennar was the entrance into the country of the Macrobians. The desert here alluded to must necessarily have been that in which Bruce suffered such dreadful hardships, namely, that above Syene.
as the earth afforded them any sustenance, were content to feed on vegetables; but as soon as they arrived among the sands and the deserts, some of them were prompted by famine to proceed to the most horrid extremities. They drew lots, and every tenth man was destined to satisfy the hunger of the rest. When Cambyses received intelligence of this fact, alarmed at the idea of his troops devouring one another, he abandoned his designs upon the Æthiopians, and returning homeward arrived at length at Thebes, after losing a considerable number of his men. From Thebes he proceeded to Memphis, from whence he permitted the Greeks to embark.—Such was the termination of the Æthiopian expedition.

39 Satisfy the hunger of the rest.]—The whole of this narrative is transcribed by Seneca, with some little variation, in his treatise de Irrâ; who at the conclusion adds, though we know not from what authority, that notwithstanding these dreadful sufferings of his troops, the king’s table was served with abundance of delicacies. Servabantur interim illi generose aves, et instrumenta epularum camelis vehabantur.

Perhaps the most horrid example on record of suffering from famine, is the description given by Josephus of the siege of Jerusalem. Eleven thousand prisoners were starved to death after the capture of the city, during the storm. Whilst the Romans were engaged in pillage, on entering several houses they found whole families dead, and the houses crammed with starved carcasses; but what is still more shocking, it was a notorious fact, that a mother killed, dressed, and eat her own child.—T.
XXVI. The troops who were dispatched against the Ammonians left Thebes with guides, and penetrated, as it should seem, as far as Oasis*. This place is distant from Thebes about a seven days journey over the sands, and is said to be inhabited by Samians, of the Æschryonian tribe. The country is called, in Greek, "The happy Islands." The army is reported to have proceeded thus far; but what afterwards became of them it is impossible to know, except from the Ammonians, or from those whom the Ammonians have instructed on this head. It is certain that they never arrived among the Ammonians, and that they never returned 31. The Ammonians affirm, that as they were marching forwards from Oasis through the sands, they halted at some place of middle distance, for the purpose of taking

* Thus it appears that Herodotus applies this name of Oasis to the greater Oasis only, which is the El, or El Wall of the present day. Indeed, Wall means the Oasis, and El Wall is therefore The Oasis. See on this subject Major Rennel, p. 555.

31 Never returned.]—The route of the army makes it plain that the guides, who detested the Persians, led them astray amidst the deserts; for they should have departed from the lake Mareotis to this temple, or from the environs of Memphis. The Ægyptians, intending the destruction of their enemies, led them from Thebes to the great Oasis, three days journey from Abydus; and having brought them into the vast solitudes of Libya, they no doubt abandoned them in the night, and delivered them over to death.—Savary.
ing repast, which whilst they were doing, a strong south wind arose, and overwhelmed them beneath a mountain of sand 31, so that they were seen no more.—Such, as the Ammonians relate, was the fate of this army.

XXVII. Soon after the return of Cambyses to Memphis, the god Apis appeared, called by the

31 Mountain of sand.]—What happens at present in performing this journey, proves the event to be very credible. Travellers, departing from the fertile valley lying under the tropic, march seven days before they come to the first town in Æthiopia. They find their way in the day-time by looking at marks, and at night by observing the stars. The sand-hills they had observed on the preceding journey having often been carried away by the winds, deceive the guides; and if they wander the least out of the road, the camels, having passed five or six days without drinking, sink under their burden, and die: the men are not long before they submit to the same fate, and sometimes, out of a great number, not a single traveller escapes; at others the burning winds from the south raise vortexes of dust, which suffocate man and beast, and the next caravan sees the ground strewn with bodies totally parched up.—Savary.

Mr. Brown, however, one of the last travellers in these regions, does not easily give credit to the idea of living persons being overwhelmed with sand. I think with my friend Major Rennel, that it is more probable that they perished from fatigue and the want of water. The proper rout would certainly have been from Memphis, from whence Ammon was also one-third nearer. See Rennel, p. 578. To this it may be added, that the nature of the desert round Seiva, or Seewa, does not appear to be constituted of that shifting sand of which the Western desert is composed.
the Greeks, Epaphus. Upon this occasion the Egyptians clothed themselves in their richest apparel, and made great rejoicings. Cambyses took notice of this, and imagined it was done on account of his late unfortunate projects. He ordered, therefore, the magistrates of Memphis to attend him; and he asked them why they had done nothing of this kind when he was formerly at Memphis, and had only made rejoicings now that he had returned with the loss of so many of his troops. They told him, that their deity had

33 Epaphus.—Epaphus was the son of Io, the daughter of Inachus. The Greeks pretended he was the same person as the god Apis; this the Egyptians rejected as fabulous, and asserted that Epaphus was posterior to Apis by many centuries.

34 Their deity.—It is probable that Apis was not always considered as a deity; perhaps they regarded him as a symbol of Osiris, and it was from this that the Egyptians were induced to pay him veneration. Others assert confidently that he was the same as Osiris; and some have said that Osiris having been killed by Typhon, Isis inclosed his limbs in an heifer made of wood. Apis was sacred to the moon, as was the bull Mnevis to the sun. Others supposed, that both were sacred to Osiris, who is the same with the sun. When he died, there was an universal mourning in Egypt. They sought for another, and having found him, the mourning ended. The priests conducted him to Nilopolis, where they kept him forty days. They afterwards removed him in a magnificent vessel to Memphis, where he had an apartment ornamented with gold. During the forty days above mentioned, the women only were suffered to see him. They stood
had appeared to them, which after a long absence it was his custom to do; and that when this stood round him, and lifting up their garments, discovered to him what modesty forbids us to name. Afterwards the sight of the god was forbidden them.

Every year they brought him an heifer, which had also certain marks. According to the sacred books, he was only permitted to live a stipulated time; when this came, he was drowned in a sacred fountain.—Larcher.

A few other particulars concerning this Apis may not be unacceptable to an English reader.

The homage paid him was not confined to Egypt; many illustrious conquerors and princes of foreign nations, Alexander, Titus, and Adrian, bowed themselves before him. Larcher says that he was considered as sacred to the moon; but Porphyry expressly says, that he was sacred to both sun and moon. The following passage is from Plutarch: "The priests affirm that the moon sheds a generative light, with which should a cow wanting the bull be struck, she conceives Apis; who bears the sign of that planet." Strabo says, that he was brought out from his apartment to gratify the curiosity of strangers, and might always be seen through a window. Pliny relates with great solemnity that he refused food from the hand of Germanicus, who died soon after; and one ancient historian asserts, that during the seven days when the birth of Apis was celebrated, crocodiles forgot their natural ferocity, and became tame.

The bishop of Avranches, M. Huet, endeavoured to prove that Apis was a symbol of the patriarch Joseph.

It has been generally allowed, that Osiris was reverenced in the homage paid to Apis. Osiris introduced agriculture, in which the utility of the bull is obvious; and this appears to be the most rational explanation that can be given of this part of the Egyptian superstition. See Savary, Pococke, &c.—T.
this happened, it was customary for all the Ægyptians to hold a solemn festival. Cambyses disbelieved what they told him, and condemned them to death, as guilty of falsehood.

XXVIII. As soon as they were executed, he sent for the priests, from whom he received the same answer. "If," said he, "any deity has shown himself familiarly in Ægypt, I must see and know him." He then commanded them to

The reader will remember that one of the plagues inflicted on Ægypt by the hand of Moses, was the destruction of the cattle, in which, as the Ægyptians venerated cattle as divinities, there appears, according to Mr. Bryant, peculiar fitness and analogy. See Bryant on the Plagues of Ægypt, p. 102.

This judgment displayed upon the kine of Ægypt, was very significant in its execution and purport; for when the distemper spread irresistibly over the country, the Ægyptians not only suffered a severe loss, but what was of far greater consequence, they saw the representatives of their deities, and their deities themselves, sink before the god of the Hebrews. They thought that the soul of Osiris was uniformly resident in the body of the bull Apis; a notion not unlike that concerning the Deli Lama, in Elith, Tangat, and Thibet. But Osiris had no power to save his brute representatives. Both the Apis and Mnevis were carried off by the same malady which swept away all the herds of deities, these Dii Stercorii who lived on grass and hay. There is reason to think that both the camel and ass were held in some degree sacred, who were involved in the same calamity. Hence it is said by the sacred writer, upon their gods also the Lord executed judgment.
to bring Apis before him, which they prepared to do. This Apis, or Epaphus, is the calf of a cow which can have no more young. The Egyptians say, that on this occasion the cow is struck with lightning, from which she conceives and brings forth Apis. The young one so produced, and thus named, is known by certain marks: The skin is black, but on its forehead is a white star of a triangular form. It has the figure of an eagle on the back, the tail is divided, and under the tongue it has an insect like a beetle.

XXIX. When the priests conducted Apis to his presence, Cambyses was transported with rage. He drew his dagger, and endeavouring to stab him in the belly, wounded him in the thigh; then turning to the priests with an insulting smile, "Wretches," he exclaimed, "think ye "

35 The tail.]—The Scholiast of Ptolemy says, but I know not on what authority, that the tail of the bull increased or diminished according to the age of the moon.—Larcher.

36 Under the tongue.]—In all the copies of Herodotus, it is ξιτι δε τη γλωσσα, upon the tongue; but it is plain from Pliny and Eusebius that it ought to be ἐντο, under. The former explains what it was, Nodus sub lingua quem cantharum appellant, "a knot under the tongue, which they call cantharus, or the beetle." viii. 46. The spot on the forehead is also changed by the commentators from quadrangular to triangular. Pliny mentions also a mark like a crescent on the right side, and is silent about the eagle. The beetle was considered as an emblem of the sun.—T.
“that gods are formed of flesh and blood, and
“thus susceptible of wounds? This, indeed, is
“a deity worthy of Ægyptians: but you shall
“find that I am not to be mocked with impu-
“niety.” He then called the proper officers, and
commanded the priests to be scourged: he di-
rected also that whatever Ægyptian was found
celebrating this festival, should be put to death.
The priests were thus punished, and no further
solemnities observed. Apis himself languished
and died in the temple, from the wound of his
thigh, and was buried by the priests without
the knowledge of Cambyses.

XXX. The Ægyptians affirm, that in conse-
quence of this impiety, Cambyses became imme-
diately mad, who indeed did not before appear to
have had the proper use of his reason. The first
impulse of his fury, was directed against Smerdis,
his own brother, who had become the object of
his jealousy, because he was the only Persian who
had been able to bend the bow, which the Ich-
thyophagi brought from Æthiopia, the breadth of
two fingers. He was therefore ordered to return
to Persia, where as soon as he arrived, Cambyses
saw

37 Buried by the priests.]—This account is contradicted by
Plutarch, who tells us, that Apis having been slain by Cam-
byses, was by his order exposed and devoured by dogs.—T.
saw this vision: a messenger appeared to arrive from Persia, informing him that Smerdis, seated on the royal throne, touched the heavens with his head. Cambyses was instantly struck with the apprehension that Smerdis would kill him, and seize his dominions; to prevent which he dispatched Prexaspes, a Persian, and one of his most faithful adherents, to put him to death. He arrived at Susa, and destroyed Smerdis, some say, by taking him aside whilst engaged in the diversion of the chace; others believe that he drowned him in the Red Sea; this, however, was the commencement of the calamities of Cambyses.

XXXI. The next victim of his fury was his sister, who had accompanied him to Ægypt. She was also his wife, which thing he thus accomplished: before this prince, no Persian had ever been known to marry his sister; but Cambyses, being passionately fond of one of his, and knowing that there was no precedent to justify his making

---

38 Marry his sister.—Ingenious and learned men of all ages have amused themselves with drawing a comparison betwixt the laws of Solon and Lycurgus. The following particularity affords ample room for conjecture and discussion: At Athens a man was suffered to marry his sister by the father, but forbidden to marry his sister by the mother. At Lacedæmon things were totally reversed, a man was allowed to marry his sister by the mother, and forbidden to marry his sister by the father.—See what Bayle says on the circumstance of a man's marrying his sister, article Sarah.—T.
making her his wife, assembled those who were called the royal judges; of them, he desired to know whether there was any law which would permit a brother to marry his sister, if he thought proper to do so. The royal judges in Persia are men of the most approved integrity, who hold their places for life, or till they shall be convicted of some crime. Every thing is referred to their decision,

39 Of some crime.]—Our judges formerly held their offices during bene placito, and the King might remove them at pleasure. This continued till the passing of the act 15 William III. chap. 2, which was expressly made for the purpose of maintaining the dignity and independence of the judges in the superior courts; and which enacted, that the commissions of the judges should be made quam diu se bene gesserint, and that their salaries should be fixed and established, but they were still liable to be removed on the address of both houses of parliament, and their seats were vacated upon any demise of the crown.

By the 1st Geo. III. chap. 23, the judges are at liberty to continue in their offices during their good behaviour, notwithstanding any demise of the crown, and their salaries are absolutely secured to them. This act was made at the express recommendation of his Majesty, from the throne; his words are memorable; he was pleased to declare that "he looked upon the independence and uprightness of the judges as essential to the impartial administration of justice; as one of the best securities of the rights and liberties of his subjects; and as most conducive to the honour of the crown." 1st Blac. Com. 257.

These and various other acts which have been passed since the Revolution in 1688, such as the bill of rights, toleration act, septennial parliament, &c. have considerably reduced the executive power; but it has on the other hand acquired so much strength from the riot-act, the establish-
decision, they are the interpreters of the laws, and determine all private disputes. In answer to the inquiry of Cambyses, they replied shrewdly, though with truth, that although they could find no law which would permit a brother to marry his sister, they had discovered one which enabled a monarch of Persia to do what he pleased. In this answer, the awe of Cambyses prevented their adopting literally the spirit of the Persian laws; and to secure their persons, they took care to discover what would justify him, who wished to marry his sister. Cambyses, therefore, instantly married the sister whom he loved⁴⁰, and not long afterwards a second⁴¹. The younger of these, who accompanied him to Egypt, he put to death.

XXXII. The manner of her death, like that of Smerdis, is differently related. The Greeks say that Cambyses made the cub of a lioness and a young whelp engage each other, and that this princess was present at the combat; when this latter was vanquished, another whelp of the same litter

⁴⁰ *Whom he loved.* — Her name, according to the Scholiast of Lucian, was Atossa, who next married Smerdis, one of the magi, and afterwards Darius, son of Hystaspes.—Larcher.

⁴¹ *Afterwards a second.* — If Libanius may be credited, the name of this lady was Meroe.—Wesseling.
litter broke what confined it, and flew to assist the other, and that both together were too much for the young lion. Cambyses seeing this, expressed great satisfaction; but the princess burst into tears. Cambyses observed her weep, and inquired the reason; she answered, that seeing one whelp assist another of the same brood, she could not but remember Smerdis, whose death she feared nobody would revenge. For which saying, the Greeks affirm, that Cambyses put her to death. On the contrary, if we may believe the Egyptians, this princess was sitting at table with her husband, and took a lettuce in her hand, dividing it leaf by leaf: "Which," said she, "seems in your eyes most agreeable, this lettuce "whole, or divided into leaves?" He replied, "When whole." "You," says she, "resemble "this lettuce, as I have divided it, for you have "thus torn in sunder the house of Cyrus." Cambyses was so greatly incensed, that he threw her down, and leaped upon her; and being pregnant, she was delivered before her time, and lost her life.

XXXIII. To such excesses in his own family was Cambyses impelled, either on account of his impious treatment of Apis, or from some other of those numerous calamities which afflict mankind. From the first hour of his birth, he laboured under what by some is termed the sacred disease.
disease*. It is, therefore, by no means astonishing that so great a bodily infirmity should at length injure the mind.

XXXIV. His phrenzy, however, extended to the other Persians. He once made a remarkable speech to Prexaspes, for whom he professed the greatest regard, who received all petitions to the king, and whose son enjoyed the honourable office of royal cup-bearer. "What," says he, upon some occasion, "do the Persians think of me, "or in what terms do they speak of me?" "Sir," he replied, "in all other respects they "speak of you with honour; but it is the ge- "neral opinion that you are too much addicted "to wine." "What!" returned the prince in anger, "I suppose they say that I drink to ex- "cess, and am deprived of reason; their former "praise, therefore, could not be sincere." At some preceding period he had asked of those whom he used most familiarly, and of Cræsus among the rest, whether they thought he had equalled the greatness of his father Cyrus. In reply they told him, that he was the greater of the two, for that to all which Cyrus had pos- sessed,

* This disease, as Larcher observes, means the epilepsy, and was named the sacred disease by jugglers and ignorant pretenders to the medical art, because they did not know how to treat it.
Thalia.

185

sessed, he had added the empire of Ægypt and of the ocean. Croesus, who was present, did not assent to this. "Sir," said he to Cambyses, "in my opinion you are not equal to your fa-

ther; you have not such a son as he left be-

hind him." Which speech of Croesus was highly agreeable to Cambyses.

XXXV. Remembering this, he turned with great anger to Prexaspes: "You," said he, "shall presently be witness of the truth or fals-

hood of what the Persians say. If I hit di-

rectly through the heart your son, who stands " yonder,

42 Through the heart.]—The story of William Tell, the great deliverer of the Swiss cantons from the yoke of the Germans, may be properly introduced in this place. Grisler governed Switzerland for the Emperor Albert. He ordered William Tell, a Swiss of some importance, for a pretended offence, to place an apple on the head of one of his children, and to hit it, on pain of death, with an arrow. He was dexterous enough to do so, without hurting his child. Grisler, when the affair was over, took notice that Tell had another arrow concealed under his cloak, and asked him what it was for? "I intended," replied Tell, "to have shot you to the heart, if I had killed my child." The gover-

nor ordered Tell to be hanged; but the Swiss, defending their countryman, flew to arms, destroyed their governor, and made themselves independent. See this historical anec-

dote referred to by Smollet, in his sublime Ode to Independence:

Who with the generous rustics sate
On Uri's rock, in close divan,
And wing'd that arrow, sure as fate,
Which ascertain'd the sacred rights of man.—T.
"yonder, it will be evident that they speak of "me maliciously; if I miss my aim, they will "say true in affirming that I am mad." No sooner had he spoken, than he bent his bow, and struck the young man. When he fell, the king ordered his body to be opened, and the wound to be examined. He was rejoiced to find that the arrow had penetrated his heart; and turning to the father with a malicious smile, "You observe," said he, "that it is not I that "am mad, but the Persians who are foolish. "Tell me," he continued, "if you ever saw a "man send an arrow surer to its mark?" Prex-aspes, seeing he was mad, and fearing for himself, replied, "I do not think, Sir, that even the "deity* could have aimed so well."—Such was his treatment of Prexaspes. At another time, without the smallest provocation, he commanded twelve Persians of distinction to be buried alive.

XXXVI. Whilst he was pursuing these extravagancies, Croesus gave him this advice: "Do "not, Sir, yield thus intemperately to the warmth "of your age and of your temper. Restrain "yourself, and remember that moderation is the "part

The above anecdote appears to be worth preserving; yet it is proper to observe that Mr. Planta, in his history of Switzerland, is silent concerning it, from which circumstance its authenticity may very reasonably be doubted.

* The deity.—That is, says Bellanger, Apollo himself, the god of the bow. But how came Prexaspes to know any thing of Apollo; the Persians had no such deity?
"part of a wise man, and it becomes every one
"to weigh the consequences of his actions.
"Without any adequate offence you destroy your
"fellow-citizens, and put even children to death.
"If you continue these excesses, the Persians
"may be induced to revolt from you. In giv-
"ing you these admonitions, I do but fulfil the
"injunctions which the king your father repeat-
"edly laid upon me, to warn you of whatever I
"thought necessary to your welfare." Kind as
were the intentions of Croesus, he received this
answer from Cambyses: "I am astonished at
"your presumption in speaking to me thus, as
"if you had been remarkable either for the judi-
cious government of your own dominions, or
"for the wise advice which you gave my father.
"I cannot forget that, instead of waiting for the
"attack of the Massagetae, you counselled him
to advance and encounter them in their own
"territories. By your misconduct you lost your
"own dominions, and by your ill advice were
"the cause of my father's ruin. But do not ex-
"pect to escape with impunity; indeed I have
"long wished for an opportunity to punish you."
He then eagerly snatched his bow, intending to

43 Snatched his bow.—The mental derangement under
which Saul laboured, previous to the elevation of David,
bears some resemblance to the character here given of Cam-
byses; and the escape of the son of Jesse from the javelin of
the king of Israel, will admit of a comparison with that of
Croesus from the arrow of Cambyses.—*T.*
pierce Croesus with an arrow, but by an expeditious flight he escaped. Cambyses instantly ordered him to be seized and put to death; but as his officers were well acquainted with their prince's character, they concealed Croesus, thinking that if at any future period he should show contrition, they might by producing him obtain a reward; but if no farther inquiries were made concerning him, they might then kill him. Not long afterwards Cambyses expressed regret for Croesus, which when his attendants perceived, they told him that he was alive. He demonstrated particular satisfaction at the preservation of Croesus, but he would not forgive the disobedience of his servants, who were accordingly executed.

XXXVII. He perpetrated many things of this kind against the Persians and his allies, whilst he stayed at Memphis: neither did he hesitate to violate the tombs, and examine the bodies of the dead. He once entered the temple of Vulcan, and treated the shrine of that deity with much contempt. The statue of this god exceedingly resembles the Pataici*, which the Phoenicians place at the prow of their triremes:

* By no other author are these Pataici mentioned. They were probably images of tutelar deities. Hesychius calls them τοις Φανικαῖς, Phoenician deities, placed by them at the stern, or, as Heliodorus affirms, from Herodotus, at the head of their vessels,
mes: they who have not seen them, may suppose them to resemble the figure of a pigmy. Cambyses also entered the temple of the Cabiri[^44], to which access is denied to all but the priests. He burned their statues, after exercising upon them his wit and raillery. These statues resemble Vulcan, whose sons the Cabiri are supposed to be.

XXXVIII. For my own part I am satisfied that Cambyses was deprived of his reason *; he would

[^44]: Cabiri.]—Concerning these see book ii. chap. li.

* On these observations of Herodotus, exhibited in this chapter, Major Rennel speaks with a spirit so congenial to my own, that I have particular satisfaction in transcribing his words:

Wheresoever Herodotus speaks of history, or of morals, he fails not to give information and satisfaction, these being his proper walks.

We could with pleasure dwell on this subject, if the scope of our work permitted it, for the justice and propriety of his remarks on matters of common life prove his observations to be very acute, and his judgment no less clear. But we cannot resist the temptation of inserting the following remarks at this time, as they shew the strong contrast between a virtuous republican of Greece, and a modern republican formed on a Gallic model; and yet no one can doubt that the permanent comfort and happiness of the human species were to the full as much the object of the former as of the latter.

Major Rennel then quotes the commencement of this chapter; after which, he says,

These are the sentiments of a republican, who, in order to enjoy a greater degree of civil liberty, quitted his native city, Halicarnassus, when its system of laws was violated by the tyrant Lygdamis; p. 7.
would not otherwise have disturbed the sanctity of temples, or of established customs. Whoever had the opportunity of choosing for their own observance, from all the nations of the world, such laws and customs as to them seemed the best, would, I am of opinion, after the most careful examination, adhere to their own. Each nation believes that their own laws are by far the most excellent; no one, therefore, but a madman, would treat such prejudices with contempt. That all men are really thus tenacious of their own customs, appears from this, amongst other instances: Darius once sent for such of the Greeks as were dependent on his power, and asked them what reward would induce them to eat the bodies of their deceased parents; they replied that no sum could prevail on them to commit such a deed. In the presence of the same Greeks, who by an interpreter were informed of what passed, he sent also for the Caltatae, a people of India known to eat the bodies of their parents. He asked them for what sum they would consent to burn the bodies of their parents. The Indians were disgusted at the question, and intreated him to forbear such language.—Such is the force of custom; and Pindar seems to me to have spoken with peculiar propriety,

45 Pindar.]—The passage in Pindar which is here referred to, is preserved in the Scholia ad Nem. ix. 35. It is this:—

\[ \text{Nomos } \delta \text{ pant } \eta \text{ basileos theaton te } \kappa \text{ abanatwn avn } \delta \text{makwn te } \beta \text{aiatov} \]
propriety, when he observed that custom was the universal sovereign.

XXXIX. Whilst Cambyses was engaged in his Egyptian expedition, the Lacedaemonians were prosecuting a war against Polycrates, the son of Æaces, who had forcibly possessed himself of Samos. He had divided it into three parts, assigning one to each of his brothers Pantagnotus and Syloson. He afterwards, having killed Pantagnotus, and banished Syloson, who was the younger, seized the whole. Whilst he was thus circumstanced,

ὅντιον ἑτατῷ χείζει. — "Custom is the sovereign of mortals and of gods; with its powerful hand it regulates things the most violent."—T.

45 Custom.]—Many writers on this subject appear not to have discriminated accurately betwixt custom and habit: the sovereign power of both must be confessed; but it will be found, on due deliberation, that custom has reference to the action, and habit to the actor. That the Athenians, the most refined and polished nation of the world, could bear to see human sacrifices represented on their theatres, could listen with applause and with delight to the misery of Ædipus, and the madness of Orestes, is to be accounted for alone from the powerful operation of their national customs. The equally forcible sway of habit, referring to an individual, was never perhaps expressed with so much beauty as in the following lines of our favourite Shakespeare:

How use doth breed a habit in a man!
This shadowy desert, unfrequented woods,
I better brook than flourishing peopled towns.
Here I can sit alone, unseen of any,
And to the nightingale’s complaining notes
Tune my distresses, and record my woes. T.
circumstanced, he made a treaty of alliance with Amasis, king of Ægypt, which was cemented by various presents on both sides. His fame had so increased, that he was celebrated through Ionia and the rest of Greece. Success attended all his military undertakings; he had a hundred fifty-oared vessels, and a thousand archers. He made no discrimination in the objects of his attacks, thinking that he conferred a greater favour even on a friend, by restoring what he had violently taken, than by not molesting him at all. He took a great number of islands, and became master of several cities on the continent. The Lesbians, who with all their forces were proceeding to assist the Milesians, he attacked and conquered in a great sea-fight. Those whom he made prisoners he put in chains, and compelled to sink the trench which surrounds the walls of Samos.

47 A greater favour.—This sentiment is false, and Libanius seems to me to have spoken with truth, when, in a discourse which is not come down to us, he says, "An instance of good fortune never gives a man so much satisfaction as the loss of it does uneasiness."

He, continues Larcher, who takes his property from another, inflicts a wound which the restitution of that property does not heal. The mind of him who has received the injury, invariably remembers it with resentment.

48 Sink the trench.—It would be an interesting labour to investigate, from ages the most remote and nations the most barbarous, the various treatment which prisoners of war have experienced: from the period, and from those who put
XL. The great prosperity of Polycrates excited both the attention and anxiety of Amasis. As his success continually increased, he was induced to write and send this letter to Samos:

"Amasis to Polycrates.

"The success of a friend and an ally fills me with particular satisfaction; but as I know the invidiousness of fortune, your extraordinary prosperity in practice against their unfortunate captives every species of oppression and of cruelty, to the present period, when the refinement of manners, and the progress of the milder virtues, soften the asperity, and take much from the horrors of war.—T.

49 Invidiousness of fortune.]—Three very distinct qualities of mind have been imputed to the three Greek historians, Herodotus, Thucydides, and Xenophon, with respect to their manner of reflecting on the facts which they relate. Of the first, it has been said that he seems to have considered the deity as viewing man with a jealous eye, as only promoting his successes to make the catastrophe of his fate the more calamitous. This is pointed out by Plutarch with the severest reprehension. Thucydides, on the contrary, admits of no divine interposition in human affairs, but makes the good or ill fortune of those whose history he gives us depend on the wisdom or folly of their own conduct. Xenophon, in distinction from both, invariably considers the kindness or the vengeance of Heaven as influencing the event of human enterprizes. "That is," says the Abbé Barthlemy, "according to the first, all sublunary things are governed by a fatality; according to the second, by human prudence; according to the last, by the piety of the individual."—The
"prosperity excites my apprehensions. If I " might determine for myself, and for those " whom I regard, I would rather have my af- " fairs sometimes flattering, and sometimes per- " verse. I would wish to pass through life with " the inconstancy of fortune is admirably described in the follow- ing passage from Horace; and with the sentiment with which the lines conclude, every ingenuous mind must desire to be in unison.

Fortuna sævo lata negotio, et
Ludum insolentem ludere pertinax,
Transmutat incertos honores,
Nunc mihi, nunc alis benigna.
Laudo manentem: si celeres quotit
Pennas, resigno quae dedit, et meâ
Virtute me involvo, probamque
Pauperiem sine dote quaero.

It would be inexcusable not to insert Dryden's version, or rather paraphrase, of the above passage.

Fortune, that with malicious joy
Does man her slave oppress,
Proud of her office to destroy,
Is seldom pleas'd to bless:
Still various, and inconstant still,
But with an inclination to be ill.
Promotes, degrades, delights in strife,
And makes a lottery of life.
I can enjoy her while she's kind,
But when she dances in the wind,
And shakes the wings, and will not stay,
I puff the prostitute away:
The little or the much she gave is quietly resign'd,
Content with poverty, my soul I arm,
And virtue, tho' in rags, will keep me warm. T.
"the alternate experience of good and evil, rather than with uninterrupted good fortune. I do not remember to have heard of any man remarkable for a constant succession of prosperous events, whose end has not been finally calamitous. If, therefore, you value my counsel, you will provide this remedy against the excess of your prosperity:—Examine well what thing it is which you deem of the highest consequence to your happiness, and the loss of which would most afflict you. When you shall have ascertained this, banish it from you, so that there may be no possibility of its return. If after this, your good fortune shall still continue without diminution or change, you will do well to repeat the remedy I propose."

XLI. Polycrates received this letter, and seriously deliberated on its contents. The advice of Amasis appeared sagacious, and he resolved to follow it. He accordingly searched among his treasures for something, the loss of which would most afflict him. He conceived this to be a seal-ring, which he occasionally wore; it was an emerald

50 *A seal-ring.*—This ring has been the subject of some controversy amongst the learned, both as to what it represented, and of what precious stone it was formed. Clemens Alexandrinus says it represented a lyre. Pliny says it was a sardonyx; and that in his time there existed
emerald set in gold, and the workmanship of Theodorus the Samian, the son of Telecles. Determining to deprive himself of this, he embarked in a fifty-oared vessel, with orders to be carried into the open sea: when he was at some distance from the island, in the presence of all his attendants, he took the ring from his finger and cast it into the sea; having done this he sailed back again.

XLII. Returning home, he regretted his loss; but in the course of five or six days this accident occurred:—A fisherman caught a fish of such size and one in the temple of Concord, the gift of Augustus, affirmed to be this of Polycrates. Solinus asserts also, that it was a sardonyx; but Herodotus expressly tells us, it was an emerald. At this period the art of engraving precious stones must have been in its infancy, which might probably enhance the value of his ring to Polycrates. It is a little remarkable that the moderns have never been able to equal the ancients in the exquisite delicacy and beauty of their performances on precious stones. Perhaps it may not be too much to add, that we have never attained the perfection with which they executed all works in miniature. Pliny says, that Cicero once saw the Iliad of Homer written so very finely, that it might have been contained 'in nuce,' in a nut-shell. Aulus Gellius mentions a pigeon made of wood, which imitated the motions of a living bird; and Ælian speaks of an artist, who wrote a distich in letters of gold, which he inclosed in the rind of a grain of corn. Other instances of a similar kind are collected by the learned Mr. Dutens, in his Enquiry into the Origin of the Discoveries attributed to the Moderns.—T.
and beauty, that he deemed it a proper present for Polycrates. He went therefore to the palace, and demanded an audience; being admitted, he presented his fish to Polycrates, with these words: "Although, sir, I live by the produce of my industry, I could not think of exposing this fish, which I have taken, to sale in the market-place, believing it worthy of you to accept, which I hope you will." The king was much gratified, and made him this reply: "My good friend, your present and your speech are equally acceptable to me; and I beg that I may see you at supper." The fisherman, delighted

"See you at supper."

The circumstance of a sovereign prince asking a common fisherman to sup with him, seems at first sight so entirely repugnant, not only to modern manners but also to consistency, as to justify disgust and provoke suspicion. But let it be remembered, that in ancient times the rites of hospitality were paid without any distinction of person; and the same simplicity of manners, which would allow an individual of the meanest rank to solicit and obtain an audience of his prince, diminishes the act of condescension which is here recorded, and which to a modern reader may appear ridiculous.

The story of the fisherman, in the fourth Satire of Juvenal, will here occur to the reader. He carried his enormous fish to the prince, who, by the way, did not ask him to supper, which marks the progress of refinement, the times of Domitian being comparatively modern. The present, however, was accompanied by a speech, which I shall insert, in Mr. Gifford's version.

This, which no subject's kitchen can contain;
This fish, reserved for your auspicious reign,
delighted with his reception, returned to his house. The servants proceeding to open the fish, found in its paunch the ring of Polycrates; with great eagerness and joy, they hastened to carry it to the king, telling him where they had met with it. Polycrates concluded that this incident bore evident marks of divine interposition; he therefore wrote down every particular of what had happened, and transmitted it to Ægypt.

XLIII. Amasis, after perusing the letter of his friend, was convinced that it was impossible for one mortal, to deliver another from the destiny which awaited him; he was satisfied that Polycrates could not terminate his days in tranquillity, whose good fortune had never suffered interruption, and who had even recovered what he had taken pains to lose. He sent therefore a herald to Samos, to disclaim all future connection; his motive for doing which, was the apprehension,

O chief, accept: to free your stomach haste,
And here at large indulge your princely taste.
No toils I set; he longed his lord to treat,
And rushed a willing victim to the net.

52 Future connection.—This may be adduced as one amongst numerous other instances, to prove, that where the human mind has no solid hopes of the future, nor any firm basis of religious faith, the conduct will ever be wayward and irregular; and although there may exist great qualities, capable of occasionally splendid actions, there will also be extraordinary weaknesses, irreconcileable to common sense or
prehension, that in any future calamity which might befall Polycrates, he, as a friend and ally, might be obliged to bear a part.

XLIV. Against this Polycrates, in all things so prosperous, the Lacedaemonians undertook an expedition, to which they were induced by those Samians who afterwards built the city of Cydon in Crete. To counteract this blow, Polycrates sent privately to Cambyses, who was then preparing for hostilities against Egypt, entreating him to demand supplies and assistance of the Samians. With this Cambyses willingly complied, and sent to solicit, in favour of Polycrates, some naval force to serve in his Egyptian expedition. The Samian prince selected those from the rest whose principles and intentions he most suspected, and sent them in forty triremes to Cambyses,

or common humanity. Diodorus Siculus, however, gives a very different account of the matter, and ascribes the behaviour of Amasis to a very different motive:—"The Egyptian," says he, "was so disgusted with the tyrannical behaviour of Polycrates, not only to his subjects but to strangers, that he foresaw his fate to be unavoidable, and therefore was cautious not to be involved in his ruin."—T.

52 Cydon in Crete.]—This place is now called Canea: some say it was at first called Apollonia, because built by Cydon the son of Apollo. Pausanias says, it was built by Cydon, son of Tegetes. It was once a place of great power, and the largest city in the island; for a description of its present condition, see Savary's Letters on Greece.—T.
byses, requesting him by all means to prevent their return.

XLV. There are some who assert, that the Samians sent by Polycrates, never arrived in Ægypt, but that as soon as they reached the Carpathian sea they consulted together, and determined to proceed no further. Others, on the contrary, affirm, that they did arrive in Ægypt, but that they escaped from their guards, and returned to Samos: they add, that Polycrates met and engaged them at sea, where he was defeated; but that, landing afterwards on the island, they had a second engagement by land, in which they were totally routed, and obliged to fly to Lacedæmon. They who assert that the Samians returned from Ægypt, and obtained a victory over Polycrates, are in my opinion mistaken; for if their own force was sufficient to overcome him, there was no necessity for their applying to the Lacedæmonians for assistance. Neither is it at all consistent with probability, that a prince who had so many forces under his command, composed as well of foreign auxiliaries as of archers of his own, could possibly be overcome by the few Samians who were returning home. Polycrates, moreover, had in his power the wives and children of his Samian subjects: these were all assembled and confined in his different harbours; and he was determined to destroy them by fire, and the harbours along with them, in case of any treasonable
treasonable conjunction between the inhabitants and the Samians who were returning.

XLVI. The Samians who were expelled by Polycrates, immediately on their arrival at Sparta, obtained an audience of the magistrates, and spoke a great while in the language of suppliants. The answer which they first received informed them, that the commencement of their discourse was not remembered, and the conclusion not understood. At the second interview they simply produced a leathern bag, and complained that it contained no bread; even to this, the Lacedæmonians replied, that their observation was unnecessary;—they determined nevertheless to assist them.

---

34 Observation was unnecessary.]—The Spartans were always remarkable for their contempt of oratory and eloquence. The following curious examples of this are recorded in Sextus Empiricus:—"A young Spartan went abroad, and endeavoured to accomplish himself in the art of speaking; on his return he was punished by the Ephori, for having conceived the design of deluding his countrymen. Another Spartan was sent to Tissaphernes, a Persian satrap, to engage him to prefer the alliance of Sparta to that of Athens; he said but little, but when he found the Athenians employed great pomp and profusion of words, he drew two lines, both terminating in the same point, but one was straight, the other very crooked; pointing these out to Tissaphernes, he merely said, "Choose." The story here related of the Samians, by Herodotus, is found also in Sextus Empiricus, but is by him applied on a different occasion, and to a different people.—T.
After the necessary preparations, the Lacedæmonians embarked with an army against Samos: if the Samians may be credited, the conduct of the Lacedæmonians in this business was the effect of gratitude, they themselves having formerly received a supply of ships against the Messenians. But the Lacedæmonians assert, that they engaged in this expedition not so much to satisfy the wishes of those Samians who had sought their assistance, as to obtain satisfaction for an injury which they had formerly received. The Samians had violently taken away a goblet which the Lacedæmonians were carrying to Croesus, and a corselet, which was given them by Amasis king of Ægypt. This latter incident took place at the interval of a year after the former: the corselet was made of linen, but there were interwoven in the piece, a great number of animals richly embroidered with cotton and gold; every part of it deserved admiration: it was composed of chains, each of which contained three hundred and sixty threads distinctly visible.

55 A corselet.—Some fragments of this were to be seen in the time of Pliny, who complains that so curious a piece of workmanship should be spoiled, by its being unravelled by different people, to gratify curiosity, or to ascertain the fact here asserted.—T.

visible. Amasis presented another corselet, entirely resembling this, to the Minerva of Lindus.

XLVIII. To this expedition against Samos, the Corinthians also contributed, with considerable ardour. In the age which preceded, and about the time in which the goblet had been taken, this people had been insulted by the Samians. Periander, the son of Cypselus, had sent to Alyattes, at Sardis, three hundred children of the principal families of the Corcyreans, to be made eunuchs. They were intrusted to

*56 Periander.*—The life of Periander is given by Diogenes Laertius; from which I have extracted such particulars as seem most worthy the attention of the English reader.

He was of the family of the Heraclidæ; and the reason of his sending the young Corcyreans, with the purpose mentioned by Herodotus, was on account of their having killed his son, to whom he wished to resign his power. He was the first prince who used guards for the defence of his person. He was by some esteemed one of the seven wise men; Plato, however, does not admit him amongst them. His celebrated saying was, that "Perseverance may do everything."

In an epigram inserted in Stephens’s Anthologia, and translated by Ausonius, χολον χαλενν is the maxim attributed to Periander, "Restrain your anger:" of which rule he must have severely felt the necessity, if, as Laertius relates, he killed his wife Melissa in a transport of passion, by kicking her or throwing a chair at her when pregnant. Her name, according to the same author, was Lyside; Melissa was probably substituted through fondness, certain nymphs and departed human souls being called Melissa.—Menage.
the care of certain Corinthians, who, by distress of weather, were compelled to touch at Samos. The Samians soon learned the purpose of the expedition, and accordingly instructed the children to fly for protection to the temple of Diana, from whence they would not suffer the Corinthians to take them. But as the Corinthians prevented their receiving any food, the Samians instituted a festival on the occasion, which they yet observe. At the approach of night, and as long as the children continued as suppliants in the temple, they introduced a company of youths and virgins, who, in a kind of religious dance, were to carry cakes made of honey and flour in their hands. This was done that the young Corecyreans, by snatching them away, might satisfy their hunger, and was repeated till the Corinthians who guarded the children departed. The Samians afterwards sent the children back to Corecyra.

57 Honey and flour.—The cakes of Samos were very famous.—See Athenæus, book xiv. c. 13.

58 Back to Corecyra.—Plutarch, in his Treatise on the Malignity of Herodotus, says, “that the young Corecyreans were not preserved by the Samians, but by the Cnidians.”—This assertion is examined and refuted by Larcher.

Pliny says, that the fish called echines stopped the vessel going swift before the wind, on board of which were messengers of Periander, having it in command to castrate the sons of the Cidian noblemen; for which reason these shells were highly reverenced in the temple of Venus at Cnidos. M. Larcher, avowedly giving the reader the above passage from Pliny, is guilty of a misquotation: “these shells,” says
XLIX. If after the death of Periander, there had existed any friendship betwixt the Corinthians and the Corcyreans, it might be supposed that they would not have assisted in this expedition against Samos. But notwithstanding these people had the same origin (the Corinthians having built Corcyra) they had always lived in a state of enmity. The Corinthians, therefore, did not forget the affront which they had received at Samos; and it was in resentment of injuries formerly received from the Corcyreans, that Periander had sent to Sardis these three hundred youths of the first families of Corcyra, with the intention of their being made eunuchs.

L. When Periander had put his wife Melissa to death, he was involved in an additional calamity. By Melissa*, he had two sons, one of whom

says he, "arrerent le vaisseau où étoient ces enfans;" whereas the words of Pliny (see Gronovius's edition, vol. i. page 609) are these, "Quibus inharentibus stetisse navem portantem nuncios à Periandro ut castrarentur nobiles pueri."—T.

* The story of Melissa is thus related in Athenæus, book xiii. c. 6.

Pythaenetus, in his third book of the history of Ægina, says that Periander, having seen Melissa, the daughter of Procles of Epidaurus, in a Peloponnesian dress, without any robe, in one simple vest, and serving out wine to the labourers, fell in love with and married her.

The following is from Diogenes Laertius:

He had two sons by Melissa, Cypselus and Lycophron. At some succeeding period, being exasperated against her by the
whom was seventeen, the other eighteen years old: Procles, their grandfather by the mother's side, had sent for them to Epidaurus, of which place he was prince; and had treated them with all the kindness due to the children of his daughter. At the time appointed for their departure, he took them aside, and asked them if they knew who had killed their mother. To these words the elder brother paid no attention; but the younger, whose name was Lycophron, took it so exceedingly to heart, that at his return to Corinth he would neither salute his father, converse with, nor answer him; in indignation at which behaviour, Periander banished him his house.

LI. After the above event, Periander asked his elder son, what their grandfather had said to them. The youth informed him, that their grandfather had received them very affectionately, but as he did not remember, he could not relate the words he had used to them at parting. The father, however, continued to press him; saying, it was impossible that their grandfather should dismiss them without some advice. This induced the young man more seriously to reflect on what had passed; and he afterwards informed his father of

the calumny of one of his concubines, he was the cause of her death, by kicking her when she was pregnant.

According to Pausanias, there was a monument in honour of this Melissa near Epidaurus.
of every particular. Upon this, Periander was determined not at all to relax from his severity, but immediately sent to those who had received his son under their protection, commanding them to dismiss him. Lycophron was thus driven from one place to another, and from thence to a third, and from this last also the severity of Periander expelled him. Yet, fearful as people were to entertain him, he still found an asylum, from the consideration of his being the son of Periander.

LII. Periander at length commanded it to be publicly proclaimed, that whoever harboured his son, or held any conversation with him, should pay a stipulated fine for the use of Apollo’s temple. After this no person presumed either to receive or converse with him, and Lycophron himself acquiesced in the injunction, by retiring to the public portico. On the fourth day, Periander himself observed him in this situation, covered with filth* and perishing with hunger: his heart relenting, he approached, and thus addressed him: “My son, which do you think preferable, your present extremity of distress, or to return to your obedience, and share with me

* The original is ἀλασμένη, literally with unwashed things. In warm countries, before the use of linen, the frequent application of the bath, and of washing, must have been peculiarly necessary, and makes this expression striking and appropriate.
"me my authority and riches? You who are "my son, and a prince of the happy Corinth, "choose the life of a mendicant, and persevere "in irritating him, who has the strongest claims "upon your duty. If the incident which in- "duces you to think unfavourably of my con- "duct, has any evil resulting from it, the whole "is fallen upon myself; and I feel it the more "sensibly, from the reflection that I was myself "the author of it. Experience has taught you "how much better it is to be envied than pi- "tied," and how dangerous it is to provoke a "superior and a parent—return therefore to my "house." To this speech Periander received no other answer from his son, than that he him- self, by conversing with him, had incurred the penalty which his edict had imposed. The king, perceiving

59 Envied than pitied.]—Of this, M. Larcher remarks, that it is a proverbial expression in the French language: it is no less so in our own. The same sentiment in Pindar is referred to by the learned Frenchman, which is thus trans- lated by Mr. West.

Nor less distasteful is excessive fame
To the sour palate of the envious mind;
Who hears with grief his neighbour's goodly name,
And hates the fortune that he ne'er shall find;
Yet in thy virtue, Hiero, persevere,
Since to be envied is a nobler fate
Than to be pitied, and let strict justice steer
With equitable hand the helm of state,
And arm thy tongue with truth: O king! beware
Of every step: a prince can never lightly err. T.
perceiving the perverseness of his son to be immutable, determined to remove him from his sight; he therefore sent him in a vessel to Corcyra, which place also belonged to him. After this, Periander made war upon his father-in-law Procles, whom he considered as the principal occasion of what had happened. He made himself master of Epidaurus, and took Procles prisoner; whom nevertheless he preserved alive.

LIII. In process of time, as Periander advanced

60 Epidaurus.]—This was a city of the Peloponnese, famous for a temple of Æsculapius. When the Romans were once afflicted by a grievous pestilence, they were ordered by the oracle to bring Æsculapius to Rome; they accordingly dispatched ambassadors to Epidaurus to accomplish this. The Epidaurians refusing to part with their god, the Romans prepared to depart: as their vessel was quitting the port, an immense serpent came swimming towards them, and finally writhed itself round the prow; the crew, thinking it to be Æsculapius himself, carried him with much veneration to Rome.—His entrance is finely described by Ovid:—

Janque caput rerum Romanam intraverat urbem,
Erigitur serpens—summoque acclivia malo
Colla movet: sedesque sibi circumspicit aptas.

Which description, fully considered, would perhaps afford no mean subject for an historical painting.

Epidaurus was also famous for its breed of horses.—See Virgil, Georgic iii. 43, 4.

Vocat ingenti clamore Cithæron
Taygetique canes, domitrixque Epidaurus equorum.

The same fact is also mentioned by Strabo, book viii.—T.
vanced in years, he began to feel himself inadequate to the cares of government; he sent therefore for Lycophron to Corcyra, to take upon him the administration of affairs: his eldest son appeared improper for such a station, and was indeed dull and stupid. Lycophron disdained to take the smallest notice of the messenger who brought him this intelligence. But Periander, as he felt his affection for the young man to be unalterable, sent his sister to him, thinking her interposition most likely to succeed. When she saw him, "Brother," said she, "will you suffer the sovereign authority to pass into other hands, and the riches of our family to be dispersed, rather than return to enjoy them yourself? Let me entreat you to punish yourself no more; return to your country and your family: obstinacy like yours is but an unwelcome guest, it only adds one evil to another. Pity is by many preferred to justice; and many, from their anxiety to fulfil their duty to a mother, have violated that which a father might expect. Power, which many so assiduously court, is in its nature precarious."

* That is Cypselus. See chap. 5—note.
† A similar sentiment occurs in the Iphigenia in Aulis of Euripides, which is thus translated by Mr. Wodhull:

Ye such splendour oft is found
Precarious.—Empire, tempting to the view,
Comes laden with affliction.

This
"Your father is growing old, do not therefore "resign to others, honours which are properly "your own." Thus instructed by her father, she used every argument likely to influence her brother; but he briefly answered, "that as long "as his father lived he would not return to Co-"rinth." When she had communicated this answer to Periander, he sent a third messenger to his son, informing him, that it was his intention to retire to Corcyra; but that Lycophron might return to Corinth, and take possession of the supreme authority. This proposition was accepted, and Periander prepared to depart for Corcyra, the young man for Corinth. But when the Corcyreans were informed of the business, to prevent the arrival of Periander among them, they put his son to death.—This was what induced that prince to take vengeance on the Corcyreans.

LIV. The Lacedæmonians arriving with a powerful fleet, laid siege to Samos, and advancing towards the walls, they passed by a tower which stands in the suburbs, not far from the sea. At this juncture Polycrates attacked them, at

This version is by no means accurate. The Greek is—

τέτοιο δὲ γέρστε τὸ χάλυ σφαλερῶν.

For this, namely power, is an unstable good.
at the head of a considerable force, and compelled them to retreat. He was instantly seconded by a band of auxiliaries, and a great number of Samians, who falling upon the enemy from a fort which was behind the mountain, after a short conflict effectually routed them, and continued the pursuit with great slaughter of the Lacedaemonians.

LV. If all the Lacedaemonians had behaved in this engagement like Archias and Lycopas, Samos must certainly have been taken; for these two alone entered the city, with those Samians who sought security within the walls, and having no means of retreat were there slain. I myself one day met with a person of the same name, who was the son of Samius, and grandson of the Archias above mentioned; I saw him at Pitane 61, of

61 Pitane.—This proper name involves some perplexity, and has afforded exercise for much acute and ingenious criticism. Martiniere, from mistaking a passage of Pausanias, asserts that it was merely a quarter, or rather suburbs of Lacedaemon, and is consequently often confounded with it. This mistake is ably pointed out and refuted by Bellanger, in his Critique de quelques Articles du Dict. de M. la Martiniere. This word is found in Hesychius, as descriptive of a distinct tribe; in Thucydides of a small town; and in Herodotus of a whole people:—See book ix. chap. 52, where he speaks of the cohort of Pitane, which in the glorious battle of Platea was commanded by Amompharetus. It is certain
of which place he was a native. This person paid more attention to Samians than to other foreigners; and he told me, that his father was called Samius, as being the immediate descendant of him, who with so much honour had lost his life at Samos. The reason of his thus distinguishing the Samians, was because they had honoured his grandfather by a public funeral.

certain that there were several places of this name; the one here specified was doubtless on the banks of the Eurotas, in Laconia.—See Essais de Critique, &c. 316.—T.

62 Public funeral.]—The manner in which the funerals of those who had died in defence of their country were solemnized at Athens, cannot fail of giving the English reader an elevated idea of that polished people.

On an appointed day a number of coffins made of cypress wood, and containing the bones of the deceased, were exposed to view beneath a large tent erected for the purpose; they who had relations to deplore, assembled to weep over them, and pay the duties dictated by tenderness or enjoined by religion. Three days afterwards the coffins were placed upon as many cars as there were tribes, and were carried slowly through the town, to the Ceramicus, where funeral games were celebrated. The bodies were deposited in the earth, and their relations and friends paid for the last time the tribute of their tears; an orator appointed by the republic—presently from an elevated place pronounced a funeral oration over his valiant countrymen; each tribe raised over the graves some kind of column, upon which was inscribed the names of the deceased, their age, and the place where they died.

The above solemnities were conducted under the inspection of one of the principal magistrates.

The most magnificent public funeral of which we have any account, was that of Alexander the Great, when his body was
LVI. The Lacedæmonians, after remaining forty days before the place without any advantage, returned to the Peloponnese. It is reported, though most absurdly, that Polycrates struck off a great number of pieces of lead cased with gold, like the coin of the country, and that was brought from Babylon to Alexandria; a minute description of which is given by Diodorus Siculus.

For a particular description of the ceremonies observed at public and private funerals, amongst the Romans, consult Montfaucon.—T.

63 Lead cased with gold.]—Similar to this artifice, was that practised on the people of Gortyna in Crete, by Hannibal, as recorded by Justin. After the defeat of Antiochus by the Romans, Hannibal retired to Gortyna, carrying with him an immense treasure. This circumstance exciting the envy of the people against him, he pretended to deposit his riches in the temple of Diana, to which place he carried with much ceremony several vessels filled with lead. He soon took an opportunity of passing over into Asia with his real wealth, which he had concealed in the images of the gods he affected to worship.

No such coins as those mentioned by Herodotus having been ever discovered, is perhaps a sufficient justification of our author, for the discredit which he has here thrown upon the story concerning the artifice of Polycrates. That spurious coins, however, of this kind were fabricated in very early times, is a fact with which every Medallist must be sufficiently acquainted. The collection of Dr. Hunter will afford several examples. One instance of a leaden coin, cased with silver, as remote as the time of Seleucus the First, of Syria, may be seen in that cabinet, where is also a similar coin of the city of Naples. The collection at the British Museum, would doubtless afford several instances of the like
with these he purchased their departure.—This was the first expedition of the Dorians* of Lacedæmon into Asia.

like forgery. In the Roman Series, Neumann (Num. Vet. Anecdoti, pars xi. p. 201) makes mention of a remarkable instance from Schulzius, of a leaden coin of Nero, which had been antiently circulated for brass, in which metal it was enclosed. Of leaden coins covered with gold there are two examples in the cabinet of Dr. Hunter; one belonging to the Emperor Trajan, and the other to his successor, Hadrian. The lead, however, in these coins seems to have been hardened by a mixture of some other metal, perhaps tin, or a small portion of silver. Demosthenes relates, from Solon, that several cities in Greece adulterated their coins as well with lead as with brass—αἰγυριοὶ πρὸς χάλκου καὶ μολυβδον μικραμεῖαν. Oratione adv. Timocratem, vol. iii. p. 440. Edit. Taylor. And Dion Cassius informs us, that the Emperor Caracalla, instead of gold and silver, issued brass and leaden money; the first of which, for the purpose of concealing his fraud, he caused to be washed or cased with gold, and the latter with silver—το, τε αἱγυριο καὶ το χρυσιο σ παρθήχει την, το μην ει μολυβδον καταδειγμενιον, το δε καὶ ει χαλκου καταχρυσεταις επικαινεντο. Lib. 77. p. 876, edit. Luevclavi.ii.

Many Samian coins are to be seen in the cabinets of collectors. These have sometimes been mistaken for the coins of Salamis in Cyprus, owing to the circumstance of their having only the two initial letters of the inscription upon them. The French writers still remain in this error, and confound the coins of both the above places.

There cannot, however, be any reasonable doubt entertained upon this point, since we have in our own country, in the Hunterian collection, a genuine coin of this people, which, while it agrees in every other respect with those attributed to Salamis, differs in the important particular of

* For this note, see the next page.
LVII. Those Samians who had taken up arms against Polycrates, when they saw themselves forsaken by the Lacedaemonians, and were distressed from want of money, embarked for Siphnos.

At

* Larcher, in his first edition, had omitted the term of Lacedaemon, thinking with Valcknaer, that Dorians was sufficient of itself. In his second edition he has rendered it Lacedæmonian Dorians.

64 Siphnos.]—This was one of those small islands lying opposite to Attica: They were seventeen in number, and called, from their situation with respect to each other, the Cyclades; they were all eminently beautiful, and severally distinguished by some appropriate excellence. The marble of Paros was of inimitable whiteness, and of the finest grain; Andros and Naxos produced the most exquisite wine; Amengos was famous for a dye made from a lichen, growing there in vast abundance. The riches of Siphnos are extolled by many ancient writers; it is now called Siphanto.

The following account of the modern circumstances of Siphnos, is extracted principally from Tournefort.

It is remarkable for the purity of its air; the water, fruit, and poultry are very excellent. Although covered with marble and granite, it is one of the most fertile islands of the Archipelago. They have a famous manufactory of straw hats, which are sold all over the Archipelago, by the name of Siphanto castors: though once so famous for its mines of gold and silver, the inhabitants can now hardly tell you
At this time the power of the Siphnians was very considerable, and they were the richest of all the inhabitants of the islands. Their soil produced both the gold and silver metals in such abundance, that from a tenth part of their revenues, they had a treasury at Delphi, equal in value to the richest which that temple possessed. Every year they made an equal distribution among themselves, of the value of their mines: whilst their wealth was thus accumulating, they consulted the oracle, to know whether they should long continue in the enjoyment of their present good fortune. From the Pythian they received this answer:

When Siphnos shall a milk-white senate show,  
And all her market wear a front of snow;  
Him let her prize whose wit suspects the most,  
A scarlet envoy from a wooden host.

At this period the prytaneum, and the forum of Siphnos, were adorned with Parian marble.

LVIII. This reply of the oracle, the Siphnians were unable to comprehend, both before and after the arrival of the Samians. As soon as the Samians

you where they were. They have plenty of lead, which the rains discover. The ladies of Siphanto cover their faces with linen bandages so dextrously, that you can only see their mouth, nose, and white of the eyes.—T.
Samians touched at Siphnos, they dispatched a messenger to the town, in one of their vessels. According to the ancient custom, all ships were painted of a red colour; and it was this which induced the Pythian, to warn the Siphnians against a wooden snare, and a red ambassador. On their arrival, the Samian ambassadors entreated the inhabitants to lend them ten talents: on being refused, they plundered the country. The Siphnians hearing of this, collected their forces, and were defeated in a regular engagement; a great number were, in the retreat, cut off from the town, and the Samians afterwards exacted from them an hundred talents.

LIX. Instead of money the Samians had received of the Hermionians, the island of Thyrea*, adjacent to the Peloponnese: this they afterwards gave as a pledge to the Træzenians. They afterwards made a voyage to Crete, where they built Cydonia, although their object in going there, was to expel the Zacynthians. In this place they continued five years, during which period they were so exceedingly prosperous, that they not only erected all those temples which are now

---

* There was another place of this name in Arcadia. See Pausanias, book 8, l. 35. In the original text it is Hydrea; but this, by common consent of the best manuscripts, is erroneous.
now seen in Cydonia, but built also the temple of Dictyna. In the sixth year, from a junction being made with the Cretans by the Æginetæ, they were totally vanquished in a sea engagement, and reduced to servitude. The prows of their vessels were taken away and defaced, and afterwards suspended in the temple of Minerva at Ægina. The Æginetæ were impelled to this conduct towards the Samians, in resentment of a former injury. When Amphicrates* reigned at Samos, he had carried on a war against the Æginetæ, by which they materially suffered; this, however, they severely retaliated.

LX. I have been thus particular in my account of the Samians, because this people produced the greatest monuments of art which are to

65 Dictyna. — Diana was worshipped in Crete, indifferently under the name of Dycynthia and of Britomartis. Britu, in the Cretan language, meant sweet, and martis, a virgin. Britomartis was also the name of a virgin greatly beloved by Diana; and what is said by Diodorus Siculus on the subject seems most worthy of attention. His story is this:—Dictyna was born in Cæron; she invented hunters toils and nets, and thence her name. She was the daughter of Jupiter, which renders it exceedingly improbable that she should be obliged to fly from Minos, and leap into the sea, where she was caught in some fishers nets. The Mons Dicytynaus of Pliny is now called Cape Spada.—T.

* This prince is mentioned by no other author.

66 The greatest monuments. — Of these monuments some vestiges are still to be seen, consult Tournefort, i. 314.
to be seen in Greece. They have a mountain which is one hundred and fifty orgyiae in height; they have made a passage entirely through this, the length of which is seven stadia, it is moreover eight feet high, and as many wide. By the side of this there is also an artificial canal, which in like manner goes quite through the mountain, and though only three feet in breadth, is twenty cubits deep. This, by the means of pipes, conveys to the city the waters of a copious spring.67

This

Port Tigani is in form of a half moon, and regards the south-east; its left horn is that famous Jetee which Herodotus reckoned amongst the three wonders of Samos. This work, at that time of day, is an evidence of the Samians application to maritime matters.

67 Copious spring.—On the left of the dale, near to the aqueduct which crosses it, are certain caverns, the entrance of some of them artificially cut. In all appearance some of these artificial caverns were what Herodotus says were ranked among the most wonderful performances of the Greek nation. The beautiful spring which tempted them to go upon so great a work, is doubtless that of Metelinous, the best in the island, the disposition of the place proving perfectly favourable, the moment they had conquered the difficulty of boring it; but in all probability they were not exact enough in levelling the ground, for they were obliged to dig a canal of twenty cubits deep for carrying the spring to the place designed. There must have been some mistake in this passage of Herodotus; for neither the Samians nor any other people could make a canal forty feet deep by only three wide.

Some five hundred paces from the sea, and almost the like distance from the river Imbrasis to Cape Cera, are the ruins of the famous temple of the Samian Juno. But for Herodotus
This is their first work, and constructed by Eupalinus, the son of Naustrophus, an inhabitant of Megara. Their second is a mole, which projects from the harbour into the sea, and is two stadia or more in length, and about twenty orgyia in height. Their last performance was a temple, which exceeds in grandeur all that I have seen. This structure was first commenced by a native of the country, whose name was Rheecus 63, son of Phileus.

LXI. Whilst Cambyses, the son of Cyrus, passed his time in Egypt, committing various excesses, two magi, who were brothers, and one of Herodotus we should never have known the name of the architect. He employed a very particular order of columns, as may be now seen. It is indeed neither better nor worse than the Ionian order in its infancy, void of that beauty which it afterwards acquired.—Thus far Tournefort.

Its ancient names were Parthenias, Anthemus, and Melanphissus. It was the birth-place of Pythagoras, and the school of Epicurus. Pococke says, that there are no remains which he could prevail upon himself to believe to belong to this canal. He adds, that the inhabitants are remarkably profligate and poor. Tournefort makes a similar remark. There are no disciples of Pythagoras, observes the Frenchman, now left in Samos; the modern Samians are no more fond of fasting, than they are lovers of silence.—T.

63 Rheecus.]—This Rheecus was not only a skilful architect, but he farther invented, in conjunction with Theodorus of Samos, the art of making moulds with clay, long before the Bacchiades had been driven from Corinth; they were also the first who made casts in brass, of which they formed statues.
of whom Cambyses had left in Persia as the manager of his domestic concerns, excited a revolt against him. The death of Smerdis, which had been studiously kept secret, and was known to very few of the Persians, who in general believed that he was alive, was a circumstance to which the last mentioned of these magi had been privy, and of which he determined to avail himself. His brother, who, as we have related, joined with him in this business, not only resembled in person, but bore the very name of the young prince, the son of Cyrus, who had been put to death by the order of his brother Cambyses. This man, Patizithes, the other magus, publicly introduced and placed upon the royal throne, having previously instructed statues. Pausanias relates the same fact, with this addition, that upon a pedestal behind the altar of Diana, called Protothenia, there is a statue by Rhæcus: it is a woman in bronze, said by the Ephesians to be that of Night. He had two sons, Telecles and Theodorus, both ingenious statuaries.

69 Resembled in person.—Similar historical incidents will here occur to the most common reader, there having been no state whose annals are come down to us, in which, from the similitude of person, factious individuals have not excited commotions. In the Roman government a false Pompey and a false Drusus claim our attention, because one exercised the political sagacity of Cicero, the other employed the pen of Tacitus. Neither have we in our own country been without similar impostors, the examples of which must be too familiar to require insertion here. If other examples be thought necessary, not many years have passed since the Russian empire was nearly overturned by a false Demetrius.—T.
instructed him in the part he was to perform. Having done this, he sent messengers to different places, and one in particular to the Egyptian army, ordering them to obey Smerdis, the son of Cyrus, alone.

LXII. These orders were everywhere obeyed. The messenger who came to Egypt found Cambyses with the army, at Ecbatana, in Syria. He entered into the midst of the troops⁷⁰, and executed

---

⁷⁰ Into the midst of the troops.—It may to an English reader at first sight seem extraordinary that any person should dare to execute such a commission as this, and should venture himself on such a business amongst the troops of a man whose power had been so long established, and whose cruelty must have been notorious. But the persons of heralds, as the functions they were to perform were the most important possible, were on all occasions sacred. Homer more than once calls them the sacred ministers of gods and men; they denounced war, and proclaimed peace. It has been a matter of dispute amongst the learned from whence this sanctity was conferred on them; they were said to be descended from Ceryx, the son of Mercury, and under the protection of that god. This office, in Athens and Sparta, was hereditary. In Athens, as I have observed, the heralds were said to be derived from Ceryx; in Sparta from Talthybius, the celebrated herald of Agamemnon. They usually carried a staff of laurel in their hands, sometimes of olive, round this two serpents were twisted. To what an extreme this reverence for the persons of ambassadors or heralds was carried, will appear from the book Polymnia, chap. 134. It is almost unnecessary to add, that in modern times the persons of ambassadors are in like manner deemed sacred, unless the treatment which in case of war they receive
cuted the commission which had been given him. When Cambyses heard this, he was not aware of any fallacy, but imagined that Prexaspes, whom he had sent to put Smerdis to death, had neglected to obey his commands. "Prexaspes," said the king, "thou hast not fulfilled my orders." "Sir," he replied, "you are certainly deceived; it is impossible that your brother should rebel against you, or occasion you the smallest trouble. I not only executed your orders concerning Smerdis, but I buried him with my own hands. If the dead can rise again, you may expect also a rebellion from Astyages the Mede; but if things go on in their usual course, you can have nothing to apprehend from your brother. I would recommend, therefore, that you send for this herald, and demand by what authority he claims our allegiance to Smerdis."

LXIII. This advice was agreeable to Cambyses: the person of the herald was accordingly seized, and he was thus addressed by Prexaspes: "You say," my friend, "that you come from Smerdis, the son of Cyrus; but I would advise you to receive at Constantinople be deemed an exception. The moment that war is declared against any foreign power, the representative of that power is seized, and sent as a prisoner to the Black Tower. Neither is the case much better in France, where the Portuguese minister was not long since thrown into the common jail, and the ministers of other foreign courts, not excepting our own, shamefully insulted.—T.
"you to be cautious, as your safety will depend
upon your speaking the truth; tell me, there-
fore, did Smerdis himself intrust you with this
commission, or did you receive it from some
one of his officers?" "I must confess," re-
p lied the herald, "that since the departure of
Cambyses on this Ægyptian expedition, I have
never seen Smerdis, the son of Cyrus. I re-
ceived my present commission from the magus
to whom Cambyses intrusted the management
of his domestic affairs; he it was who told me
that Smerdis, the son of Cyrus, commanded
me to execute this business." This was the
sincere answer of the herald; upon which, Cam-
byses thus addressed Prexaspes: "I perceive
that, like a man of integrity, you performed
my commands, and have been guilty of no
crime: but what Persian, assuming the name
of Smerdis, has revolted against me?" "Sir,"
answered Prexaspes, "I believe I comprehend
the whole of this business: the magi have ex-
cited this rebellion against you, namely, Pati-
zithes, to whom you intrusted the manage-
ment of your household, and Smerdis, his
brother."

LXIV. As soon as Cambyses heard the name
of Smerdis, he was impressed with conviction of
the truth; and he immediately perceived the real
signification of the dream in which he had seen
Smerdis seated on the royal throne, and touching the firmament with his head. Acknowledging that he had destroyed his brother without any just cause, he lamented him with tears. After indulging for a while in the extremest sorrow, which a sense of his misfortunes prompted, he leaped hastily upon his horse, determining to lead his army instantly to Susa, against the rebels. In doing this, the sheath fell from his sword\(^71\), which,

\(^{71}\) The sheath fell from his sword.—The first swords were probably made of brass; for, as Lucretius observes,

Et prior æris erat quam ferri cognitus usus.

It has been remarked, on the following passage of Virgil,

Æratæque micant peltae, micat æneus ensis,

that the poet only uses brass poetically instead of iron; this, however, seems forced and improbable. More anciently, which indeed appears from Homer, the sword was worn over the shoulder; if, therefore, the attitude of Cambyses in the act of mounting his horse be considered, his receiving the wound here described does not appear at all unlikely. In contradiction to modern custom, the Romans sometimes wore two swords, one on each side; when they wore but one it was usually, though not always, on the right side. On this subject, see Montfaucon, where different specimens of ancient swords may be seen. The Persian swords were called acinaces, or scymetars.—\(T\).

In order to see how the ancient Persians wore their swords, we have only to look at the figures on the ruins of Persepolis, where we shall see the swords, or rather daggers, on the right side.

In all our more ancient monuments also, there is a sword at the left, and a dagger at the right side.
THALIA.

which, being thus naked, wounded him in the thigh. The wound was in the very place in which he had before struck Apis, the deity of the Egyptians. As soon as the blow appeared to be mortal, Cambyses anxiously inquired the name of the place where he was: they told him it was called Ecbatana. An oracle from Butos had warned him that he should end his life at Ecbatana; this he understood of Ecbatana of the Medes, where all his treasures were deposited, and where he conceived he was to die in his old age. The oracle, however, spoke of the Syrian

72 Ecbatana.—Ctesias makes this prince die at Babylon; but this is not the only place in which he contradicts Herodotus.—Larcher.

It appears by the context, that this Ecbatana was in Syria; an obscure place, probably, and unheard of by Cambyses till this moment. A similar fiction of a prophecy occurs in our own history. Henry the Fourth had been told he was to die in Jerusalem, but died in the Jerusalem-chamber at Westminster. Which tale Shakespeare has immortalized by noticing it.

It hath been prophesy'd to me many years
I should not die but in Jerusalem,
Which vainly I suppos'd the Holy Land.
But bear me to that chamber, there I'll lie,
In that Jerusalem shall Harry die.

This fiction was common in all ages, and indeed Shakespeare has three or four others.

Batanea in Palestine marks the place of this Syrian Ecbatana.—See D'Anville.
Syrian Ecbatana. 'When he learned the name of the town, the vexation arising from the rebellion of the magus, and the pain of his wound, restored him to his proper senses. "This," he exclaimed, remembering the oracle, "is doubtless the place, in which Cambyses, son of Cyrus, is destined to die."

LXV. On the twentieth day after the above event, he convened the more illustrious of the Persians who were with him, and thus addressed them: "What has happened to me, compels me to disclose to you what I anxiously desired to conceal. Whilst I was in Ægypt, I beheld in my sleep a vision, which I could wish had never appeared to me. A messenger seemed to arrive from home, informing me that Smerdis, sitting on the royal throne, touched the heavens with his head. It is not in the power of men to counteract destiny; but fearing that my brother would deprive me of my kingdom, I yielded to passion rather than to prudence. Infatuated as I was, I dispatched Prexaspes to Susa, to put Smerdis to death. After this great crime, I lived with more confidence, believing that, Smerdis being dead, no one else would rise up against me. But my ideas of the future were fallacious; I have murdered my brother, a crime equally unnecessary and atrocious, and am nevertheless deprived of my power.
"power. It was Smerdis the magus, whom the divinity pointed out to me in my dream, and

73 Smerdis the magus.—Mr. Richardson, in his Dissertation on the Language, &c. of Eastern nations, speaking of the disagreement between the Grecian and Asiatic history of Persia, makes the following remarks:

From this period (610 before Christ) till the Macedonian conquest, we have the history of the Persians as given us by the Greeks, and the history of the Persians as written by themselves. Between these classes of writers we might naturally expect some difference of facts, but we should as naturally look for a few great lines which might mark some similarity of story: yet from every research which I have had an opportunity to make, there seems to be nearly as much resemblance between the annals of England and Japan, as between the European and Asiatic relations of the same empire. The names and numbers of their kings have no analogy; and in regard to the most splendid facts of the Greek historians, the Persians are entirely silent. We have no mention of the great Cyrus, nor of any king of Persia who in the events of his reign can apparently be forced into a similitude. We have no Croesus, king of Lydia; not a syllable of Cambyses, or of his frantic expedition against the Ethiopians. Smerdis Magus, and the succession of Darius, the son of Hystaspes, by the neighing of his horse, are to the Persians circumstances equally unknown, as the numerous assassinations recorded by the Greeks, &c.

To do away, at least in part, any impression to the prejudice of Grecian history, which may be made by perusing the above remarks of Mr. Richardson, the reader is presented with the following sentiments of Mr. Gibbon.

"So little has been preserved of Eastern history before Mahomet, that the modern Persians are totally ignorant of the victory of Sapor, an event so glorious to their nation."

The incident here mentioned is the victory of Sapor over Valerian the Roman emperor, who was defeated, taken prisoner,
and who has now taken arms against me.

Things being thus circumstanced, it becomes you to remember that Smerdis, the son of Cyrus, is actually dead, and that the two magi, one with whom I left the care of my household, and Smerdis his brother, are the men who now claim your obedience. He, whose office it would have been to have revenged on these magi any injuries done to me, has unjustly perished by those who were nearest to him: but since he is no more, I must now tell you, O Persians! what I would have you do when I am dead.—I intreat you all, by those gods who watch over kings, and chiefly you who are of the race of the Achaemenides, that you will never permit this empire to revert to the Medes. If by any stratagem they shall have seized it, by stratagem do you recover it. If they have by force obtained it, do you by force wrest it from them. If you shall obey my advice, may the earth give you its fruits in abundance! may you ever be free, and your wives and your flocks prolific! If you do not obey me, if you neither recover, nor attempt to re-

soner, and died in captivity. This happened in the year 260 of the Christian era. Mahomet was born in the year 571 of the same era; if, therefore, Mr. Gibbon's observation be well founded, which it appears to be, Mr. Richardson's objections fall to the ground. It may be observed, indeed, that Richardson has discovered a great want of judgment in his account of the Persian history.—T.
THALIA

"cover the empire, may the reverse of my wishes
" befall you, and may every Persian meet a fate
" like mine!"

LXVI. Cambyses, having thus spoken, bewailed his misfortunes. When the Persians saw the king thus involved in sorrow, they tore their garments, and expressed their grief aloud. After a very short interval, the bone became infected, the whole of the thigh mortified, and death ensued. Thus died Cambyses, son of Cyrus, after a reign of seven years and five months, leaving no offspring, male or female. The Persians who were present could not be persuaded that the magi had assumed the supreme authority, but rather believed that what Cambyses had asserted concerning the death of Smerdis, was prompted by his hatred of that prince, and his wish to excite the general animosity of the Persians against him. They were, therefore, generally satisfied that it was really Smerdis, the son of Cyrus, who had assumed the sovereignty. To which they were the more inclined, because Prexaspes afterwards positively denied that he had put Smerdis to death. When Cambyses was dead, he could not safely have confessed that he had killed the son of Cyrus.

74 Seven years and five months.]—Clemens Alexandrinus makes him reign ten years.—Larcher.
LXVII. After the death of Cambyses, the magus, by the favour of his name, pretending to be Smerdis, the son of Cyrus, reigned in security during the seven months, which completed the eighth year of the reign of Cambyses. In this period he distinguished the various dependents on his power by his great munificence, so that after his death he was seriously regretted by all the inhabitants of Asia, except the Persians. He commenced his reign by publishing everywhere an edict which exempted his subjects, for the space of three years, both from tribute and military service.

LXVIII. In the eighth month he was detected in the following manner: Otanes, son of Pharnaspes, was of the first rank of the Persians, both with regard to birth and affluence. This nobleman was the first who suspected that this was not Smerdis, the son of Cyrus; and was induced to suppose who he really was, from his never quitting the citadel, and from his not inviting any of the nobles to his presence. Suspicious of the imposture, he took these measures: He had a daughter named Phaedyma, who had been married to Cambyses, and whom, with the other wives of the late king, the usurper had taken to himself. Otanes sent a message to her, to know whether she cohabited with Smerdis, the son of Cyrus, or with any other person. She returned
THALIA.

returned for answer, "that she could not tell, "as she had never seen Smerdis, the son of "Cyrus, nor did she know the person with "whom she cohabited." Otanes sent a second time to his daughter: "If," says he, "you do "not know the person of Smerdis, the son of "Cyrus, inquire of Atossa who it is with whom "you and she cohabit, for she must necessarily "know her brother." To which she thus re- plied, "I can neither speak to Atossa, nor in- "deed see any of the women that live with him. "Since this person, whoever he is, came to the "throne, the women have all been kept sep- "rate."

75 Kept separate.—Chardin, speaking of the death of a king of Persia, and the intemperate grief of his wives, says, that the reason why the women upon such occasions are so deeply afflicted, is not only for the loss of the king their husband, but for the loss of that shadow of liberty which they enjoyed during his life; for no sooner is the prince laid in his tomb, but they are all shut up in particular houses. Tournefort tells us, that after the death of the sultan at Constantinople, the women whom he honoured with his embraces, and their eldest daughters, are removed into the old seraglio of Constantinople; the younger are sometimes left for the new emperor, or are married to the bashas.

It appears that in the East from the remotest times, females have been jealously secluded from the other sex. Nevertheless, we learn from modern travellers, that this is done with some restrictions, and that they are not only suffered to communicate with each other, but on certain days to leave the haram or seraglio, and take their amusements abroad.
LXIX. This reply more and more justified the suspicions of Otanes; he sent, therefore, a third time to his daughter: "My daughter," he observed, "it becomes you, who are nobly born, " to engage in a dangerous enterprize, when " your father commands you. If this Smerdis " be not the son of Cyrus, but the man whom I " suspect,

Where a plurality of wives is allowed, each, it should seem from Tournefort, has a distinct and separate apartment. "I was extremely at a loss," says he, "how to behave to the great men of the East, when I was called in, and visited, as a physician, the apartments of their wives. These apartments are just like the dormitories of our religious, and at every door I found an arm covered with gauze, thrust out through a small loop-hole, made on purpose: at first I fancied they were arms of wood or brass, to serve for sconces to light up candles in at night; but it surprized me when I was told I must cure the persons to whom these arms belonged." The Easterns listen with much astonishment to the familiarity prevailing betwixt the sexes in Europe. When told that no evil results from this, they answer with a proverb, "Bring butter too near the fire, and you will hardly keep it from melting."—T.

76 If this Smerdis ]—That Cambyses was the Ahasuerus, and Smerdis the Artaxerxes, that obstructed the work of the temple, is plain from hence, that they are said in Scripture to be the kings of Persia that reigned between the time of Cyrus and the time of that Darius by whose decree the temple was finished; but, that Darius being Darius Hystaspes, and none reigning between Cyrus and that Darius in Persia, but Cambyses and Smerdis, it must follow from hence, that none but Cambyses and Smerdis could be the Ahasuerus and Artaxerxes, who are said in Ezra to have put a stop to this work.—Prideaux.
"suspect, he ought not, possessing your person, "and the sovereignty of Persia, to escape with "impunity. Do this, therefore—when next you "shall be admitted to his bed, and shall observe "that he is asleep, examine whether he has any "ears; if he has, you may be secure you are "with Smerdis, the son of Cyrus; but if he has "not, it can be no other than Smerdis, one of "the magi." To this Phaedyma replied, "That "she would obey him, notwithstanding the dan-
ger she incurred; being well assured, that if "he had no ears, and should discover her in "endeavouring to know this, she should be in-
stantly put to death." Cyrus had in his life-
time deprived this Smerdis of his ears for some atrocious crime.

Phaedyma complied in all respects with the injunctions

77 This Smerdis of his ears.]—The discovery of this imposture was long celebrated in Persia as an annual festival. By reason of the great slaughter of the magians then made, it was called magophonia. It was also from this time that they first had the name of magians, which signified the cropt-eared, which was then given them on account of this impostor, who was thus cropt. Mige-gush signified, in the language of the country then in use, one that had his ears cropt; and from a ringleader of that sect who was thus cropt, the author of the famous Arabic lexicon called Camus, tells us they all had this name given them; and what Herodotus and Justin, and other authors, write of this Smerdis, plainly shews that he was the man.—Prideaux.
injunctions of her father. The wives of the Persians sleep with their husbands by turns. When this lady next slept with the magus, as soon as she saw him in a profound sleep, she tried to touch his ears, and being perfectly satisfied that he had none, as soon as it was day, she communicated the intelligence to her father.

LXX. Otanes instantly revealed the secret to Aspathines and Gobryas, two of the noblest of the Persians, upon whose fidelity he could depend, and who had themselves suspected the imposture. It was agreed that each should disclose the business to the friend in whom he most confided. Otanes therefore chose Intaphernes; Gobryas, Megabyzus; and Aspathines, Hydarnes. The conspirators being thus six in number, Darius,

78 The wives of the Persians sleep with their husbands by turns.]—By the Mahometan law, the Persians, Turks, and indeed all true believers, are permitted to have wives of three different descriptions; those whom they espouse, those whom they hire, and those whom they purchase. Of the first kind they are limited to four, of the two last they may have as many as they please or can afford. Amongst the singularities sanctified by the Alcoran, the following is not the least: a woman legally espoused may insist on a divorce from her husband, if he is impotent, if he is given to unnatural enjoyment, or, to use Tournefort's expression, if he does not pay his tribute upon Thursday and Friday night, which are the times consecrated to the conjugal duties.—T.
Thalia.

Tint, son of Hystaspes, arrived at Susa, from Persia, where his father was governor; when they instantly agreed to make him also an associate.

LXXI. These seven met⁷⁹, and after mutual vows of fidelity consulted together. As soon as Darius was to speak, he thus addressed his confederates: "I was of opinion that the death of " Smerdis, son of Cyrus, and the usurpation of " the magus, were circumstances known only to " myself, and my immediate purpose in coming " hither, was to accomplish the usurper's death. " But since you are also acquainted with the " matter, I think that all delay will be dangerous, " and that we should instantly execute our " intentions." "Son of Hystaspes," replied Otanes, "born of a noble parent, you seem the " inheritor of your father's virtue; nevertheless, " be not precipitate, but let us enter on this bu- " siness with caution: for my own part, I am " averse to undertake any thing, till we shall have " strengthened our party." "My friends," resu- " med Darius, "if you follow the advice of " Otanes, your ruin is inevitable. The hope of " reward will induce some one to betray your " designs

⁷⁹ These seven met.]—Mithridates, king of Pontus, who afterwards gave so much trouble to the Romans, was de- scended from one of these conspirators: see book vii. chap. ii.—Larcher.
"designs to the magus. An enterprize like this should be accomplished by yourselves, disdain- ing all assistance. But since you have re- vealed the secret, and added me to your party, let us this very day put our designs in exe- cution; for I declare, if this day pass without our fulfilling our intentions, no one shall to- morrow betray me; I will myself disclose the conspiracy, to the magus."

LXII. When Otanes observed the ardour of Darius; "Since," he replied, "you will not suffer us to defer, but precipitate us to the termination of our purpose, explain how we shall obtain entrance into the palace, and at- tack the usurpers. That there are guards re- gularly stationed, if you have not seen them yourself, you must have known from others; how shall we elude these?" "There are many circumstances, Otanes," returned Da- rius, "which we cannot so well explain by our words as by our actions. There are others which may be made very plausible by words, but are capable of no splendour in the execu- tion. You cannot suppose that it will be dif- ficult for us to pass the guards; who among them will not be impelled by reverence of our persons, or fear of our authority, to admit us? Besides this, I am furnished with an unde- niable excuse; I can say that I am just ar- rived"
rived from Persia, and have business from my father with the king. If a falsehood must be spoken, let it be so. They who are sincere, and they who are not, have the same object in view. Falsehood is prompted by views of interest, and the language of truth is dictated by some promised benefit, or by the hope of inspiring confidence. So that, in fact, these are only two different paths to the same end: if no emolument were proposed, the sincere man

---

8o If a falsehood must be spoken.]—This morality, says Lar-cher, is not very rigid; but it ought, he continues, to be remembered, that Herodotus is here speaking of falsehood which operates to no one's injury. Bryant, on the contrary, remarks, that we may rest assured these are the author's own sentiments, though attributed to another person; hence, he adds, we must not wonder if his veracity be sometimes called in question. But when we remember that one of the first rudiments of Persian education was to speak the truth, the little scruple with which Darius here adopts a falsehood, must appear very remarkable. Upon this subject of sincerity, Lord Shaftesbury has some very curious remarks. "The chief of ancient critics," says he, "extols Homer above all things for understanding how to lye in perfection. His lyes, according to that master's opinion, and the judgment of the gravest and most venerable writers, were in themselves the justest moral truths, and exhibitive of the best doctrine and instruction in life and manners." It is well remarked by one of the ancients, though I do not remember which, that a violation of truth implies a contempt of God, and fear of man. Yet the gravest of our moralists and divines have allowed that there may be occasions in which a deviation from strict truth is venial.—T.
would be false, and the false man sincere. As to the guards, he who suffers us to pass shall hereafter be remembered to his advantage; he who opposes us shall be deemed an enemy: let us, therefore, now hasten to the palace, and execute our purpose."

LXXIII. When he had finished, Gobryas spake as follows: "My friends, to recover the empire will indeed be glorious; but if we fail, it will be nobler to die, than for Persians to live in subjection to a Mede, and he too deprived of his ears. You who were present at the last hours of Cambyses, cannot but remember the imprecations which he uttered against the Persians, if they did not attempt the recovery of the empire. We then refused him attention, thinking him influenced by malignity and resentment; but now I at least second the proposal of Darius, nor would I have this assembly break up, but to proceed instantly against the magus." The sentiments of Gobryas gave universal satisfaction.

LXXIV. During the interval of this consultation, the two magi had together determined to make a friend of Prexaspes: they were aware that he had been injured by Cambyses, who had slain his son with an arrow; and that he alone was privy to the death of Smerdis, the son of Cyrus,
Cyrus, having been his executioner; they were conscious also that he was highly esteemed by the Persians. They accordingly sent for him, and made him the most liberal promises; they made him swear that he would on no account disclose the fallacy which they practised on the Persians; and they promised him, in reward of his fidelity, rewards without number. Prexaspes engaged to comply with their wishes; they then told him of their intention to assemble the Persians beneath the tower which was the royal residence, from whence they desired him to declare aloud that he who then sate on the throne of Persia was Smerdis, the son of Cyrus, and no other. They were induced to this measure, from a consideration of the great authority of Prexaspes, and because he had frequently declared that he had never put Smerdis, the son of Cyrus, to death, but that he was still alive.

LXXV. Prexaspes agreed to comply with all that they proposed; the magi accordingly assembled

81 Beneath the tower.—This was the citadel. Anciently the kings lodged here for security. In chap. lxxviii. Herodotus observes that the magus would not stir from the citadel, and in chap. lxxix. he says that the conspirators left behind in the citadel such of their friends as were wounded in attacking the magi.—Larcher.
sembled the Persians, and leading Prexaspes to
the top of the tower, commanded him to make
an oration. He, without paying the least atten-
tion to the promises he had made, recited the
genealogy of the family of Cyrus, beginning
with Achaemenes. When he came to Cyrus him-
self, he enumerated the services which that prince
had rendered the Persians. He then made a full
discovery of the truth, excusing himself for con-
cealing it so long, from the danger which the
revealing it would have incurred, but that it was
now forced from him. He assured them that he
actually had killed Smerdis, by the order of Cam-
byses, and that the magi now exercised the sove-
reign authority. When he had imprecated many
curses upon the Persians, if they did not at-
tempt

\[\text{Imprecated many curses.}\]

In ancient times, and amongst
the Orientals in particular, these kind of imprecations were
very frequent, and supposed to have an extraordinary in-
fluence. The curse of a father was believed to be particu-
larly fatal; and the Furies were always thought to execute
the imprecations of parents upon disobedient children. When
Joshua destroyed Jericho, he imprecated a severe curse upon
whoever should attempt to rebuild it. This was at a distant
period of time accomplished. We have two examples of
solemn imprecations on record, which have always been
deemed worthy of attention. The one occurred in ancient
Rome: When Crassus, in defiance of the auspices, prepared
to make an expedition against the Parthians. The tribune
Ateius waited for him at the gates of the city, with an altar,
a fire, and a sacrifice ready prepared, and with the most

horrid
tempt the recovery of their rights, and take vengeance upon the usurpers, he threw himself from the tower.—Such was the end of Prexaspes, a man who through every period of his life merited esteem.

LXXVI. The seven Persians, having determined instantly to attack the magi, proceeded, after imploring the aid of the gods, to execute their

horrid solemnity devoted him to destruction. The other example is more modern, it is the imprecation which Averroes, the famous Arabian philosopher, uttered against his son. As it is less generally known, I shall recite it at length: Averroes was one day seriously conversing with some grave friends, when his son, in a riotous manner, intruded himself, accompanied by some dissolute companions. The old man, viewing him with great indignation, spoke two verses to the following effect: "Thy own beauties could not content thee, thou hast stripped the wild goat of his beauties; and they who are as beautiful as thyself admire thee. Thou hast got his wanton heart, his lecherous eyes, and his senseless head; but to-morrow thou shalt find thy father will have his pushing horns. Cursed be all extravagancies! when I was young, I sometimes punished my father; now I am old, I cannot punish my son; but I beg of God to deprive him rather of life, than suffer him to be disobedient." It is related that the young man died within ten months.—T.

[83 Merited esteem.]—Upon this incident M. Larcher remarks, that this last noble action of his life but ill corresponds with the mean and dastardly behaviour which Prexaspes had before exhibited to the murderer of his son. Larcher, however, forgets the profound veneration which the Persians invariably paid to their sovereigns.
their purpose. They were at first ignorant of the fate of Prexaspes, but they learned it as they went along. They withdrew for a while to deliberate together; they who sided with Otanes, thought that their enterprise should be deferred, at least during the present tumult of affairs. The friends of Darius, on the contrary, were averse to any delay, and were anxious to execute what they had resolved, immediately. Whilst they remained in this suspense, they observed seven pair of hawks\(^8\), which, pursuing two pair of vultures, beat and severely tore them. At this sight, the conspirators came immediately into the designs of Darius;

\[\text{\textit{Seven pair of hawks.}}\]—The superstition of the ancients, with respect to the sight or flight of birds, has often exercised the sagacity and acuteness of philosophers and scholars. Some birds furnished omens from their chattering, as crows, owls, &c.; others from the direction in which they flew, as eagles, vultures, hawks, &c. An eagle seen to the right was fortunate.—The sight of an eagle was supposed to foretell to Tarquinius Priscus, that he should obtain the crown; it predicted, also, the conquests of Alexander; and the loss of their dominions to Tarquin the Proud, and Dionysius tyrant of Syracuse; innumerable other examples must here occur to every reader. A raven seen on the left hand was unfortunate:

\[\text{Sæpe sinistra cava prædixit ab ilico cornix.—Virgil.}\]

Upon the subject of the auspicia, the most satisfactory intelligence is to be obtained from the treatise of Cicero de Divinatione. From the Latin word \textit{auspicio}, from \textit{aves inspicere}, comes our English word \textit{auspicious}.—\textit{T}.
Thalia.

245

rius; and, relying on the omen of the birds, advanced boldly to the palace.

LXXVII. On their arrival at the gates, it happened as Darius had foreseen. The guards, unsuspicous of what was intended, and awed by their dignity of rank, who, in this instance, seemed to act from a divine impulse, without any questions, permitted them to enter. As soon as they came to the interior part of the palace, they met with the eunuchs, who were employed as the royal messengers; these asked their business, and at the same time threatened the guards for suffering them to enter. On their opposing their farther entrance, the conspirators drew their swords, and, encouraging each other, put the eunuchs to death; from hence they instantly rushed to the inner apartments.

LXXVIII. Here the two magi happened to be,

65 Awed by their dignity.]—The most memorable instance in history, of the effects of this kind of impression, is that of the soldier sent into the prison to kill Caius Marius:—The story is related at length by Plutarch. When the man entered the prison with his sword drawn, “Fellow,” exclaimed the stern Roman, “darest thou kill Caius Marius?” Upon which the soldier dropped his sword, and rushed out of doors. This fact, however, being no where mentioned by Cicero, who speaks very largely on the subject of Marius, has given Dr. Middleton reason to suppose, that the whole is a fabulous narration.—T.
be, in consultation about what was to be done in consequence of the conduct of Prexaspes. As soon as they perceived the tumult, and heard the cries of the eunuchs, they ran towards them, and preparing in a manly manner to defend themselves, the one seized a bow and the other a lance. As the conspirators drew near to the attack, the bow became useless; but the other magus, who was armed with the lance, wounded Aspathines in the thigh, and deprived Intaphernes of one of his eyes, though the blow was not fatal. The magus who found his bow of no service retreated to an adjoining apartment, into which he was followed by Darius and Gobryas. This latter seized the magus round the waist; but as this happened in the dark, Darius stood in hesitation, fearing to strike, lest he should wound Gobryas. When Gobryas perceived this, he

86 Round the waist.]—Not unlike to this was the manner in which David Rizio, the favourite of the unfortunate Mary queen of Scots, was murdered. Rizio was at supper with his mistress, attended by a few domestics, when the king, who had chosen this place and opportunity to satisfy his vengeance, entered the apartment with Ruthven and his accomplices. The wretched favourite, conceiving himself the victim whose death was required, flew for protection to the queen, whom he seized round the waist. This attitude did not save him from the dagger of Ruthven; and before he could be dragged to the next apartment, the rage of his enemies put an end to his life, piercing his body with fifty-six wounds.—See the account in Robertson's History of Scotland, vol. i. 359.—T.
he inquired why he was thus inactive: when Darius replied, "that it was from his fear of wounding his friend;" "Strike," exclaimed Gobryas, "though you should pierce both."—Darius instantly complied, and ran his sword through the magus.

LXXIX. Having thus slain the magi, they instantly cut off their heads. Their two friends

87 It may not in this place be impertinent, to give a succinct account of the magi or magians, as selected from various writers on the subject. This sect originating in the East, abominating all images, worshipped God only by fire. Their chief doctrine was, that there were two principles, one of which was the cause of all good, the other the cause of all evil; the former is represented by light, the other by darkness; and that from these two all things in the world were made. The good god they named Yazdan or Ormund; the evil god, Ahraman: the former is by the Greeks named Oramasdes, the latter Arimanius. Concerning these two gods, some held both of them to have been from eternity; others contended the good being only to be eternal, the other created: both agreed in this, that there will be a continual opposition between these two till the end of the world, when the good god shall overcome the evil god; and that afterwards each shall have his world to himself, the good god have all good men with him, the evil god all wicked men. Of this system, Zoroaster was the first founder, whom Hyde and Prideaux make contemporary with Darius Hystaspes, but whose era, as appears from Moyle, the Greek writers of the age of Darius make many hundred years before their own time. After giving a concise but animated account of the theology of Zoroaster, Mr. Gibbon
who were wounded were left behind, as well to guard the citadel, as on account of their inability to

has this foolish and preposterous remark: "Every mode of religion, to make a deep and lasting impression on the human mind, must exercise our obedience, by enjoining practices of devotion for which we can assign no reason; and must acquire our esteem by inculcating moral duties, analogous to the dictates of our own hearts." The religion of Zoroaster was abundantly provided with the former, and possessed a sufficient portion of the latter. At the age of puberty the faithful Persian was invested with a mysterious girdle; from which moment the most indifferent action of his life was sanctified by prayers, ejaculations, and genuflexions, the omission of which was a grievous sin. The moral duties, however, were required of the disciple of Zoroaster, who wished to escape the persecution of Arimanius, or, as Mr. Gibbon writes it, Ahriman, and to live with Ormund or Ormusd in a blissful eternity, where the degree of felicity will be exactly proportioned to the degree of virtue and piety. In the time of Theodosius the younger, the Christians enjoyed a full toleration in Persia; but, Abdas indiscreetly pulling down a temple in which the Persians worshipped fire, a persecution against the Christians was excited, and prosecuted with unrelenting cruelty. The magi are still known in Persia, under the name of parsi or parses; their superstition is contained in three books, named Zend, Pazend, and Vestna, said by themselves to be composed by Zerdascht, whom they confound with the patriarch Abraham. The Oriental Christians pretend, that the magi who adored Jesus Christ, were disciples of Zoroaster, who predicted to them the coming of the Messiah, and the new star which appeared at his birth. Upon this latter subject a modern writer has ingeniously remarked, that the presents which the magi made to Christ, indicated their esteeming him a royal child, notwithstanding his mean situation and appearance; they gave him gold, frankincense, and myrrh;
to follow them. The remaining five ran out into the public street, having the heads of the magi in their hands, and making violent outcries. They called aloud to the Persians, explaining what had happened, and exposing the heads of the usurpers; at the same time, whoever of the magi appeared was instantly put to death. The Persians hearing what these seven noblemen had effected, and learning the imposture practised on them by the magi, were seized with the desire of imitating their conduct. Sallying forth with drawn swords, they killed every magus whom they met; and if night had not checked their rage, not one would have escaped. The anniversary of this day the Persians celebrate with great solemnity; the festival they observe is called the magophonia, or the slaughter of the magi. On this occasion no magus is permitted to be seen in public, they are obliged to confine themselves at home.

LXXX. When the tumult had subsided, and an interval of five days was elapsed, the conspirators met to deliberate on the situation of affairs. Their sentiments, as delivered on this occasion, however

myrrh, such as the queen of Sheba presented to Solomon in his glory.

It seems almost unnecessary to add, that from these magi or magians the English word magic is derived:—See Prideaux, Gibbon, Bayle, Bibliotheque Orientale, and Harmer's Observations on Passages of Scripture.—T.
T H A L I A.

however they may want credit with many of the Greeks, were in fact as follows.—Otanes recommended a republican form of government: “It does not,” says he, “seem to me advisable, that the government of Persia should hereafter be entrusted to any individual person, this being neither popular nor wise. We all know the extreme lengths to which the arrogance of Cambyses proceeded, and some of us have felt its influence. How can that form of government possibly be good, in which an individual with impunity may indulge his passions, and which is apt to transport even the best of men beyond the bounds of reason? When a man, naturally envious, attains greatness, he instantly becomes insolent: Insolence and jealousy are the distinguishing vices of tyrants, and when combined lead to the most enormous

58 Government of Persia.—Machiavel, reasoning upon the conquests of Alexander the Great, and upon the unresisting submission which his successors experienced from the Persians, takes it for granted, that amongst the ancient Persians there was no distinction of nobility. This, however, was by no means the case; and what Mr. Hume remarks of the Florentine secretary was undoubtedly true, that he was far better acquainted with Roman than with Greek authors:—See the Essay of Mr. Hume, where he asserts that “Politics may be reduced to a science;” with his note at the end of the volume, which contains an enumeration of various Persian noblemen of different periods, as well as a refutation of Machiavel’s absurd position above stated.—T.
enormous crimes. He who is placed at the
summit of power, ought indeed to be a stranger
to envy; but we know, by fatal experience,
that the contrary happens. We know also,
that the worthiest citizens excite the jealousy
of tyrants, who are pleased only with the most
abandoned: they are ever prompt to listen to
the voice of calumny. If we pay them tem-
perate respect, they take umbrage that we are
not more profuse in our attentions: if the re-
spect with which they are treated seem immo-
derate, they call it adulation. The severest
misfortune of all is, that they pervert the in-
stitutions of their country, offer violence to
our females, and put those whom they dislike
to death, without the formalities of justice.
But a democracy in the first place bears the
honourable name of an equality\textsuperscript{89}; the dis-
orders

\textsuperscript{89} \textit{Equality.]}—The word in the original is \textit{isonomia}, which
means equality of laws. M. Larcher translates it literally
isonomic: but in English, as we have no authority for the
use of it, isonomy would perhaps seem pedantic. The fol-
lowing passage from Lord Shaftesbury fully explains the
word in question.—Speaking of the influence of tyranny on
the arts, "The high spirit of tragedy," says he, "can ill
subsist where the spirit of liberty is wanting." The genius
of this poetry consists in the lively representation of the dis-
orders and misery of the great; to the end that the people,
and those of a lower condition, may be taught the better to
content themselves with privacy, enjoy their safer state, and
prize the equality and justice of their guardian laws.—This
however is but a jejune account of tragedy, and as incorrect
"orders which prevail in a monarchy cannot
"there take place. The magistrate is appointed
"by lot, he is accountable for his administration,
"and whatever is done, must be with the general
"consent. I am, therefore, of opinion, that
"monarchy should be abolished, and that, as
"every thing depends on the people 90, a popular
"government should be established."—Such
were the sentiments of Otanes.

LXXXI. Megabyzus, however, was inclined
to an oligarchy; in favour of which he thus ex-
pressed himself: " All that Otanes has urged,
"concerning the extirpation of tyranny, meets
"with my intire approbation; but when he re-
"commends the supreme authority to be en-
"trusted to the people, he seems to me to err
"in the extreme. Tumultuous assemblies of
"the people are never distinguished by wisdom,
"but always by insolence; neither can any thing
"be

as it is faulty. Could Lord Shaftesbury think of the fine
tragedies under Louis XIV? — T.
90 Every thing depends on the people.] — In this place the
favourite adage of Vox populi vox Dei, must occur to every
reader; the truth of which, as far as power is concerned, is
certainly indisputable; but with respect to political sagacity,
the sentiment of Horace may be more securely vindicated;

Interdum vulgus rectum videt, est ubi peccat.
Which Pope happily renders,

The people's voice is odd;
It is, and it is not, the voice of God. T,
be possibly more preposterous, than to fly
from the tyranny of an individual to the in-
temperate caprice of the vulgar. Whatever
a tyrant undertakes, has the merit of previous
concert and design; but the people are always
rash and ignorant. And how can they be
otherwise, who are uninstructed, and with no
internal sense of what is good and right?
Destitute of judgment, their actions resemble
the violence of a torrent. To me, a de-

91 *No internal sense.*—The original is somewhat per-
plicated; but the acute Valckaer, by reading ρόλιον for ρόλιαν,
at once removes all difficulty.—*T.*

92 *Their actions resemble the violence of a torrent.*—Upon
the subject of popular assemblies, the following remarks of
M. de Lolme seem very ingenious, as well as just.

Those who compose a popular assembly are not ac-
tuated, in the course of their deliberations, by any clear or
precise view of any present or positive personal interest. As
they see themselves lost as it were in the crowd of those
who are called upon to exercise the same function with
themselves; as they know that their individual vote will
make no change in the public resolution, and that to what-
ever side they may incline, the general result will neverthe-
less be the same, they do not undertake to inquire how far
the things proposed to them agree with the whole of the
laws already in being, or with the present circumstances of
the state. As few among them have previously considered
the subjects on which they are called upon to determine,
very few carry along with them any opinion or inclination
of their own, and to which they are resolved to adhere. As,
however, it is necessary at last to come to some resolution,
the major part of them are determined, by reasons which
they
"Mocracy seems to involve the ruin of our country: let us, therefore, entrust the government to a few individuals, selected for their talents and their virtues. Let us constitute a part of these ourselves, and from the exercise of authority so deposited, we may be justified in expecting the happiest events."

LXXXII. Darius was the third who delivered his opinion. "The sentiments of Megabyzus," he observed, "as they relate to a popular government, they would blush to pay any regard to on much less serious occasions: an unusual sight, a change of the ordinary place of assembly, a sudden disturbance, a rumour, are, amidst the general want of a spirit of decision, the sufficiens ratio of the determination of the greatest part; and from this assemblage of separate wills, thus formed, hastily and without reflection, a general will results, which is also without reflection."—Constitution of England, 250, 251.

Quod enim fretum, quem Euripum, tot motus, tantas et tam varias habere putatis agitaciones fluctuum, quantas perturbationes et quantos æstus habet ratio comitiorum.—Cicero Orat. pro Mur. Larcher has quoted the following remark of Gognet, which it may be wondered that the vigilance of Bonaparte's satellites suffered to pass.

The best writers of antiquity have invariably expressed themselves in favour of a monarchy. Herodotus, Plato, Aristotle, Xenophon, Isocrates, Cicero, Seneca, Tacitus, Plutarch, and others, have considered a monarchical government as the most advantageous and the most perfect of all those which mankind have invented. It is singular enough that the greater part of the above writers flourished in republics.
VERNMENT, are unquestionably wise and just; but from his opinion of an oligarchy, I totally dissent*. Supposing the three different forms of government, monarchy, democracy, and an oligarchy, severally to prevail in the greatest perfection, I am of opinion that monarchy has greatly the advantage. Indeed nothing can be better than the government of an individual eminent for his virtue. He will not only have regard to the general welfare of his subjects, but his resolutions will be cautiously concealed from the public enemies of the state. In an oligarchy, the majority who have the care of the

* I must regret that the limits I have found it necessary to propose to myself, will not allow me to transcribe the whole of M. Larcher's noble and excellent sentiments on the subject of these speeches of the Persian noblemen. He contrasts the situation of the Athenians whilst under their kings, and when in their democratic state. Under their kings, says he, the people were happy, but they were never so under a democratic government. Whether he had in his eye the government under which he lives, when he thus expressed himself, I leave to the reader's sagacity to determine.

The governing power, conducting itself alone by caprice and passion, destroyed on one day the proceedings of the former; controlled by demagogues, it thought to control them, but in reality was enslaved. In a word, it neither knew how to command, nor to obey. It often changed the forms of government, without adhering to any, like those diseased persons who every moment change their posture without being satisfied with any but that in which they are not. What he says a little further on is no less pertinent and spirited, and our only surprize is, that it was endured.
"the state, though employed in the exercise of "virtue for the public good, will be the objects "of mutual envy and dislike. Every individual "will be anxious to extend his own personal "importance, from which will proceed, faction, "sedition, and bloodshed. The sovereign power "coming by these means to the hands of a "single person, constitutes the strongest argu- "ment to prove what form of government is "best. Whenever the people possess the su- "preme authority, disorders in the state are "unavoidable: such disorders introduced in a "republic, do not separate the bad and the pro- "fligate from each other, they unite them in the "closest bonds of connection. They who mu- "tually injure the state, mutually support each "other; this evil exists till some individual, as- "suming authority, suppresses the sedition; he "of course obtains popular admiration, which "ends in his becoming the sovereign"; and "this again tends to prove, that a monarchy is "of all governments the most excellent. To "comprehend all that can be said at once, to "what are we indebted for our liberty? did we "derive

93 *Ends in his becoming the sovereign.*—It is probable that the ascendant of one man over multitudes began during a state of war, where the superiority of courage and of genius discovers itself most visibly, where unanimity and concert are most requisite, and where the pernicious effects of disorder are most sensibly felt.—*Hume.*
"derive it from the people, an oligarchy, or an individual? For my own part, as we were certainly indebted to one man for freedom, I think that to one alone the government should be intrusted. Neither can we without danger change the customs of our country."

LXXXIII. Such were the three different opinions delivered, the latter of which was approved by four out of the seven. When Otanes saw his desire to establish an equality in Persia, rejected, he spoke thus: "As it seems determined that Persia shall be governed by one person, whether

94 Four out of the seven.]—This majority certainly decided in favour of that species of government which is most simple and natural; and which would be, if always vested in proper hands, the best: but the abuse of absolute power is so probable, and so destructive, that it is necessary by all means to guard against it. Aristotle inclines to the opinion of those, who esteem a mixed government the best that can be devised. Of this they considered the Lacedaemonian constitution a good specimen; the kings connecting it with monarchy, the senate with oligarchy, and the ephori and syssytia with democracy.—Aristot. Pol. I. ii. cap. 4. Modern speculators on this subject, with one accord allow the constitution of Great Britain, as it stands at present, to be a much more judicious and perfect mixture of the three powers, which are so contrived as to check and counterbalance each other, without impeding that action of the whole machine, which is necessary to the well-being of the people. The sixth book of Polybius opens with a dissertation on the different forms of government; which deserves attention.—T.'
"whether chosen among ourselves by lot, or by
the suffrages of the people, or by some other
method, you shall have no opposition from me:
I am equally averse to govern or obey. I
therefore yield, on condition that no one of
you shall ever reign over me, or any of my
posterity." The rest of the conspirators as-
senting to this, he made no farther opposition,
but retired from the assembly. At the present
period this is the only family in Persia which
retains its liberty, for all that is required of them
is not to transgress the laws of their country.

LXXXIV. The remaining six noblemen con-
tinued to consult about the most equitable mode
of electing a king; and they severally deter-
mined, that if the choice should fall upon any of
themselves, Otanes himself and all his posterity
should be annually presented with a Median
habit95, as well as with every other distinction

95 Presented with a Median habit.—The custom of giving
vests or robes in Oriental countries, as a mark of honour
and distinction, may be traced to the remotest antiquity,
and still prevails. On this subject the following passage is
given, from a manuscript of Sir John Chardin, by Mr. Har-
mer, in his Observations on Passages of Scripture.
"The kings of Persia have great wardrobes, where there
are always many hundreds of habits ready, designed for pre-
sents, and sorted. They pay great attention to the quality
or merit of those to whom these vestments or habits are
given:
magnificent in itself, and deemed honourable in Persia. They decreed him this tribute of respect, as he had first agitated the matter, and called them together. These were their determinations respecting Otanes; as to themselves, they mutually agreed that access to the royal palace should be permitted to each of them, without
given: those that are given to the great men have as much difference as there is between the degrees of honour they possess in the state.”

All modern travellers to the East speak of the same custom. We find also in the Old Testament various examples of a similar kind. Chardin also, in his account of the coronation of Solyman the Third, king of Persia, has the following passage:

“His majesty, as every grandee had paid him his submissions, honoured him with a calate or royal vest. This Persian word, according to its etymology, signifies intire, perfect, accomplished, to signify either the excellency of the habit, or the dignity of him that wears it; for it is an infallible mark of the particular esteem which the sovereign has for the person to whom he sends it, and that he has free liberty to approach his person; for when the kingdom has changed its lord and master, the grandees who have not received this vest dare not presume to appear before the king without hazard of their lives.”

This Median habit was made of silk; it was indeed, among the elder Greeks, only another name for a silken robe, as we learn from Procopius, την εσθητα—ὑν παλαι μεν ‘Ελληνες Μεδίκην εκαλέν, ὑν δὲ Σηρίκην ὀρομαζον. The remainder of this passage, literally translated, is, “and all that present which in Persia is most honourable.” This gift is fully explained by Xenophon in the first book of the Anabasis; it consisted of

∠ 2 ∠ a horse
without the ceremony of a previous messenger\(^5\), except when the king should happen to be in bed with his wife. They also resolved, that the king should marry no woman but from the family of one of the conspirators. The mode they adopted to elect a king was this:—They agreed to meet on horseback at sun-rise\(^*\) in the vicinity of the city, and to make him king, whose horse should neigh the first.

LXXXV. Darius had a groom, whose name was Œbares, a man of considerable ingenuity, for whom, on his return home, he immediately sent. "Œbares," said he, "it is determined " that we are to meet at sun-rise on horse-back, and that he among us shall be king, " whose horse shall first neigh. Whatever acute-" ness you have, exert it on this occasion, that " no

---

\(5^6\) Previous messenger.\]—Visits to the great in Eastern countries are always preceded by messengers, who carry presents, differing in value according to the dignity of the person who is to receive them. Without some present or other no visit must be made, nor favour expected.—\(T\).

* Their appointing this period to determine who was to be prince, arose probably from the custom always observed by the Persians of paying adoration to the rising sun.
"no one but myself may obtain this honour."
"Sir," replied Æbares, "if your being a king
or not depends on what you say, be not afraid;
"I have a kind of charm, which will prevent
any one's being preferred to yourself."—
"Whatever," replied Darius, "this charm may
"be, it must be applied without delay, as the
"morning will decide the matter." Æbares,
therefore, as soon as evening came, conducted to
the place before the city a mare, to which he
knew the horse of Darius was particularly in-
clined; he afterwards brought the horse there,
and after carrying him several times round and
near the mare, he finally permitted him to cover
her.

LXXXVI. The next morning as soon as it
was light the six Persians assembled, as had been
agreed, on horseback. After riding up and down
at the place appointed, they came at length to
the spot where, the preceding evening, the mare
had been brought; here the horse of Darius in-
stantly began to neigh, which, though the sky
was remarkably clear, was instantly succeeded
by thunder and lightning. The heavens thus
seemed to favour, and indeed to act in concert
with Darius. Immediately the other noblemen
dismounted, and falling at his feet, hailed him
king.\(^7\)

\(^7\) Hailed him king.]—Darius was about twenty years old
when
LXXXVII. Such, according to some, was the stratagem of Oebares; others, however, relate the matter differently; and both accounts prevail in Persia. These last affirm, that the groom, having rubbed his hand against the private parts of the mare, afterwards folded it up in his vest, and that in the morning, as the horses were about to depart, he drew it out from his garment, and touched the nostrils of the horse of Darius, and that this scent instantly made him snort and neigh.

LXXXVIII. Darius the son of Hystaspes was when Cyrus died. Cambyses reigned seven years and five months; Smerdis Magus was only seven months on the throne; thus Darius was about twenty-nine years old when he came to the crown.—Larcher.

This circumstance of thunder and lightning from a cloudless sky, is often mentioned by the ancients, and was considered by them as the highest omen. Horace has left an ode upon it, as a circumstance which staggered his Epicurean notions, and impressed him with awe and veneration, l. i. Od. 34; and the commentators give us instances enough of similar accounts. With us there is no thunder without clouds, except such as is too distant to have much effect; it may be otherwise in hot climates, where the state of the air is much more electrical.—T.

98 Darius the son of Hystaspes.]—Archbishop Usher holdeth that it was Darius Hystaspes that was the king Ahasuerus, who married Esther; and that Atossa was the Vashti, and Antystone the Esther of the holy scriptures. But Herodotus positively tells us, that Antystone was the daughter of Cyrus, and therefore she could not be Esther: and that Atossa had four
was thus proclaimed king; and, except the Arabians, all the nations of Asia who had been subdued first by Cyrus, and afterwards by Cambyses, acknowledged his authority. The Arabians* were never reduced to the subjection of Persia, but were in its alliance; they afforded Cambyses

four sons by Darius, besides daughters, all born to him after he was king; and therefore she could not be that queen Vashti, who was divorced from the king her husband in the third year of his reign, nor he that Ahasuerus that divorced her.—Prideaux.

* Perhaps it may be said of the Arabians with greater truth than of any other nation, that they have never been enslaved.

On this subject Larcher refers to Genesis, c. xvi. v. 12, where God says of Ismael, the parent of the Arabians:

"And he will be a wild man, his hand will be against every man, and every man's hand against him, and he shall dwell in the presence of all his brethren."

99 _Never reduced to the subjection of Persia._—The independence of the Arabs has always been a theme of praise and admiration, from the remotest ages to the present. Upon this subject the following animated apostrophe from Mr. Gibbon, includes all that need be said. "The arms of Sesostris and Cyrus, of Pompey and Trajan, could never achieve the conquest of Arabia. The present sovereign of the Turks may exercise a shadow of jurisdiction, but his pride is reduced to solicit the friendship of a people whom it is dangerous to provoke, and fruitless to attack. The obvious causes of their freedom are inscribed on the character and country of the Arabs; the patient and active virtues of a soldier are insensibly nursed in the habits and discipline of a pastoral life. The long memory of their independence is the firmest pledge of its perpetuity; and succeeding generations are animated to prove their descent, and to maintain
Cambyses the means of penetrating into Egypt without which he could never have accomplished his purpose. Darius first of all married two women of Persia, both of them daughters of Cyrus, Atossa who had first been married to Cambyses, and afterwards to the magus, and Antystone a virgin. He then married Parmys, daughter of Smerdis, son of Cyrus*, and also that daughter of Otanes who had been the instrument in discovering the magus. Being firmly established on the throne, his first work was the erection of an equestrian statue, with this inscription: "Darius, son of Hystaspes, obtained the sovereignty of Persia by the sagacity of his horse, and the ingenuity of Æbares his groom." The name of the horse was also inserted.

LXXXIX. The next act of his authority was to divide Persia into twenty provinces†, which

their inheritance. When they advance to battle, the hope of victory is in the front, and in the rear the assurance of a retreat. Their horses and camels, who in eight or ten days can perform a march of four or five hundred miles, disappear before the conqueror: the secret waters of the desert elude his search; and his victorious troops are consumed with hunger, thirst, and fatigue, in the pursuit of an invisible foe, who scorns his efforts, and safely reposes in the heart of the burning solitude."

* Namely Phædyma. See c. 68.
† The account given of the Persian monarchy by Herodotus is curious, and seems to have been copied from some
they call satrapies, to each of which a governor was appointed. He then ascertained the tribute they were severally to pay, connecting sometimes many nations together, which were near each other, under one district; and sometimes he passed over many which were adjacent, forming one department* of various remote and scattered nations. His particular division of the provinces, and the mode fixed for the payment of their annual tribute, was this: They whose payment was to be made in silver, were to take the Babylonian talent 100 for their standard; the Euboic public record, which had been communicated to him. According to it, the Persian empire was divided into twenty satrapies, or governments. The tribute levied from each is specified, amounting in all to 14,560 Eubœan talents, which Dr. Arbuthnot reckons to be equal to £2,807,437 sterling money; a sum extremely small for the revenue of the great king, and which ill accords with many facts concerning the mines, magnificence, and luxury of the East, that occur in ancient authors.—Robertson on India.

* Much as I dislike the word department, it seems the only one here which will express the meaning of the author. It certainly may be doubted whether Darius connected these scattered nations in one government. Darius the Mede, usually understood to be Cyaxares the Second, divided his empire, which consisted of the territories of Babylon and Media, into 120 provinces; these were subject to three presidents, of whom Daniel was the first. See Daniel, c. vi. v. 1. Major Renneil, 231.

100 Babylonian talent.]—What follows on the subject of the talent, is extracted principally from Arbuthnot's tables of ancient coins.
Euboic talent was to regulate those who made their payment in gold; the Babylonian talent, it is to be observed, is equal to seventy Euboic minae. During the reign of Cyrus, and indeed of Cambyses, there were no specific tributes, but presents were made to the sovereign. On account of these and similar innovations, the Persians call Darius a merchant, Cambyses a despot, but Cyrus a parent. Darius seemed to have

The word talent in Homer, is used to signify a balance, and in general it was applied either to a weight or a sum of money, differing in value according to the ages and countries in which it was used. Every talent consists of 60 minae, and every mina of 100 drachmas, but the talents differed in weight according to the minae and drachmas of which they were composed.

What Herodotus here affirms of the Babylonian talent, is confirmed by Pollux and by Ælian.

The Euboic talent was so called from the island Eubœa; it was generally thought to be the same with the Attic talent, because both these countries used the same weights: the mina Euboica, and the mina Attica, each consisted of 100 drachmas.

According to the above, the Babylonian talent would amount, in English money, to about £226; the Euboic or Attic talent to £193. 15s.—T.

101 No specific tributes. This seemingly contradicts what was said above, that the magus exempted the Persians for three years from every kind of impost. It must be observed that these imposts were not for a constancy, they only subsisted in time of war, and were rather a gratuity than an impost. Those imposed by Darius were perpetual; thus Herodotus does not in fact contradict himself.—Larcher.
have no other object in view but the acquisition of gain; Cambyses was negligent and severe; whilst Cyrus was of a mild and gentle temper, ever studious of the good of his subjects.

XC. The Ionians and Magnesians of Asia, the Æolians, Carians, Lycians, Melyeans 102, and Pamphylians, were comprehended under one district, and jointly paid a tribute of four hundred talents of silver; they formed the first satrapy. The second, which paid five hundred talents, was composed of the Mysians, Lydians, Alysonians, Cabalians, and Hygennians 103. A tribute of three hundred and sixty talents was paid by those who inhabit the right side of the Hellespont, by the Phrygians and Thracians of Asia, by the Paphlagonians, Mariandynians 104, and Syrians; and

102 Melyeans.—These people are in all probability the same with the Milyans of whom Herodotus speaks, book i. c. clxxiii. and book vii. c. clxxvii. They were sometimes called Minyans, from Minos, king of Crete.—T.

103 Hygennians.—For Hygennians Wesseling proposes to read Obigenians.—T.

104 Mariandynians.—These were on the coast of Bithynia, where was said to be the Acherusian cave, through which Hercules dragged up Cerberus to light, whose foam then produced aconite. Thus Dionysius Periegetes, l. 788.

That sacred plain where erst, as fablers tell,
The deep-voic’d dog of Pluto, struggling hard
Against the potent grasp of Hercules,
With foamy drops impregnating the earth,
Produc’d dire poison to destroy mankind.
and these nations constituted the third satrapy*. The Cilicians were obliged to produce every day a white horse, that is to say, three hundred and sixty annually, with five hundred talents of silver; of these one hundred and forty were appointed for the payment of the cavalry who formed the guard of the country; the remaining three

* For a most perspicuous and most satisfactory elucidation of the geographical situation of these satrapies, I cannot do better than once for all refer the reader to Major Rennel's excellent work, from p. 234 to p. 323. The conclusion of this portion of Major Rennel's work breathes sentiments worthy a soldier and a Briton. I cannot deny myself the satisfaction of transcribing the last paragraph:

"If the enemy is bent on our destruction, what have we to do, but to dispute the point, even to extermination? What worse can befall us, by contesting it, than by submitting? Take the examples of conquest, of submission, and of fraternization, severally; and then let any one, if he can, point out the distinction between the treatment that the French government has shewn to the different people who have fallen under its power, by those different modes! We have therefore nothing to hope but from our own exertions, under the favour of Heaven: and let us trust, that the contest will terminate gloriously, and perpetuate the system of liberty transmitted to us by our ancestors, and thus hold out another bright example to succeeding times. The hatred of Europe is rising against France (or rather against its government; for we hope that this distinction may be made in favour of a great proportion of the people, who may not be made accomplices in its guilt); that hatred must increase, and become general; and all Frenchmen who leave their own country on schemes of hostility, must in the end be hunted down as enemies to the peace and comfort of mankind. We will hope that the time is not far distant."
three hundred and sixty were received by Darius: these formed the fourth satrapy.

XCI. The tribute levied from the fifth satrapy was three hundred and fifty talents. Under this district, was comprehended the tract of country which extended from the city Posideium, built on the frontiers of Cilicia and Syria*, by Amphilochus, son of Amphiaraus¹⁰⁵, as far as Egypt, part of Arabia alone excluded, which paid no tribute. The same satrapy, moreover, included all Phœnicia, the Syrian Palestine, and the isle of Cyprus. Seven hundred talents were exacted from

* It should be remembered that Syria is always regarded by Herodotus as synonymous with Assyria.

What the Greeks called Palestine the Arabs call Falastin, which is the Philistines of Scripture.

¹⁰⁵ Amphilochus, son of Amphiaraus.—For an account of Amphiaraus, see book the first, chap. xlvi. The name of the mother of Amphilochus, according to Pausanias, was Eriphyle. He appears to have obtained an esteem and veneration equal to that which was paid to his father. He had an oracle at Mallus, in Cilicia, which place he built; he had also an altar erected to his honour at Athens. His oracle continued in the time of Plutarch, and the mode of consulting it was this:—The person who wished an answer to some inquiry passed a night in the temple, and was sure to have a vision, which was to be considered as the reply. There is an example in Dion Cassius, of a picture which was painted in the time of Commodus, descriptive of an answer communicated by this oracle.—T.
from Ægypt, from the Africans which border upon Ægypt, from Cyrene and Barce, which are comprehended in the Ægyptian district. The produce of the fishery of the lake Mœris was not included in this, neither was the corn, to the amount of seven hundred talents more; one hundred and twenty thousand measures of which, were applied to the maintenance of the Persians and their auxiliary troops garrisoned within the white castle of Memphis: this was the sixth satrapy. The seventh was composed of the Satgagydæ, the Gandarii, the Dadicæ and Apartyæ, who together paid one hundred and seventy talents. The eighth satrapy furnished three hundred talents, and consisted of Susa* and the rest of the Cissians.

XCII. Babylon and the other parts of Assyria constituted the ninth satrapy, and paid a thousand talents of silver, with five hundred young eunuchs. The tenth satrapy furnished four hundred and fifty talents, and consisted of Ecbatana, the rest of Media, the Parycanii, and the Orthodoxybantes.

* The modern Khusistan answers to this division. The Persian monarchs had more than one residence, and according to Major Rennel, Susa and Persepolis were their winter habitations. In the time of Herodotus, however, Susa was the capital.
corybantes. The Caspians, the Pausicæ, the Pantimathï, and the Daritæ, contributed amongst them two hundred talents, and formed the eleventh satrapy. The twelfth produced three hundred and sixty talents, and was composed of the whole country from the Bactrians to Æglos.

XCIII. From the thirteenth satrapy four hundred talents were levied; this comprehended Pactyïca, the Armenians, with the contiguous nations, as far as the Euxine. The fourteenth satrapy consisted of the Sangatians, the Sarangæans, the Thamanaëans, Utians, and Menci, with those who inhabit the islands of the Red Sea, where the king sends those whom he banishes ¹⁰⁶; these jointly contributed six hundred talents.

¹⁰⁶ *Whom he banishes.*—Banishment seems to have been adopted as a punishment at a very early period of the world; and it may be supposed that, in the infancy of society, men, reluctant to sanguinary measures, would have recourse to the expulsion of mischievous or unworthy members, as the simpler and less odious remedy. When we consider the effect which exile has had upon the minds of the greatest and wisest of mankind, and reflect on that attractive sweetness of the natal soil, which whilst we admire in poetic description we still feel to be *ratione valentior omnï*, it seems wonderful that banishment should not more frequently supersede the necessity of sanguinary punishments. That Ovid, whose mind was enervated by licentious habits, should deplore, in strains the most melancholy, the absence of what alone could make life supportable, may not perhaps be thought
talents. The Sacæ and Casii* formed the fifteenth satrapy, and provided two hundred and fifty talents. Three hundred talents were levied from the Parthians, Chorasmians, Sogdians, and Arians, who were the sixteenth satrapy.

XCIV. The Paricanii and Æthiopians of Asia paid four hundred talents, and formed the seventeenth satrapy. The eighteenth was taxed at two hundred talents, and was composed of the Matieni, the Saspirians, and Alarodians. The Moschi, Tibareni, Macrones, Mosynæci, and Mardians, provided three hundred talents, and were the nineteenth satrapy. The Indians, the most numerous nation of whom we have any knowledge, were proportionally taxed; they formed

thought wonderful; but that Cicero, whose whole life was a life of philosophic discipline, should so entirely lose his firmness, and forget his dignity, may justify our concluding of the punishment of exile, that human vengeance need not inflict a more severe calamity. In opposition to what I have asserted above, some reader will perhaps be inclined to cite the example of Lord Bolingbroke, his conduct, and his reflections upon exile; but I think I can discern through that laboured apology, a secret chagrin and uneasiness, which convinces me at least, that whilst he acted the philosopher and the stoic, he had the common feelings and infirmities of man.—T.

* I have altered this word, which was Caspii in the former edition, to Casii, on the authority of Major RenneL The Caspii have already been concluded with the Daritæ, in c. 92, and the Kashgurians actually join to the Sacæ.
formed the twentieth satrapy, and furnished six hundred talents in golden ingots.

XCV. If the Babylonian money be reduced to the standard of the Euboic talent, the aggregate sum will be found to be nine thousand eight hundred and eighty talents in silver; and, estimating the gold at thirteen times the value of silver, there will be found, according to the Euboic talent, four thousand six hundred and eighty of these talents. The whole being estimated together, it will appear that the annual tribute paid

* Gold was found in the rivers of India, in the region which was towards Persia; so says the Ayin Acbary. The number of six hundred must be a mistake; it is out of all proportion, and would make this satrapy pay four times and a half as much as Babylonia and Assyria, which was one of the richest satrapies. See Rennel, as before.

107 Thirteen times the value of silver.—The proportion of gold to silver varied at different times, according to the abundance of these two metals. In the time of Darius it was thirteen to one; in the time of Plato, twelve; and in the time of Menander, the comic poet, it was ten.—Larcher.

In the time of Julius Cæsar the proportion of gold to silver at Rome was no more than nine to one. This arose from the prodigious quantity of gold which Cæsar had obtained from the plunder of cities and temples. It is generally supposed amongst the learned, that in the gold coin of the ancients one-fiftieth part was alloy.—T.

108 The annual tribute.—The comparison of two passages in Herodotus (book i. chap. xcii. and book iii. chaps. lxxxix. xcvi.) reveals an important difference between the gross and the
paid to Darius was fourteen thousand five hundred and sixty talents, omitting many trifling sums not deserving our attention*.

XCVI. Such was the sum which Asia principally, and Africa in some small proportion, paid to Darius. In process of time, the islands also were taxed, as was that part of Europe which extends to Thessaly. The manner in which the king deposited these riches in his treasury, was this:—The gold and silver were melted and poured into earthen vessels; the vessel, when full, was removed, leaving the metal in a mass. When any was wanted, such a piece was broken off, as the contingency required.

XCVII. We have thus described the different satrapies,

the net revenue of Persia, the sums paid by the provinces, and the gold or silver deposited in the royal treasury. The monarch might annually save three millions six hundred thousand pounds of the seventeen or eighteen millions raised upon the people—Gibbon.

* Taking the value of the Euboic talent at £.193. 15s. according to Arbuthnot's valuation, the sum arising on the above number of talents is about £.2,821,000. If to this be added, according to the above statement, 700 talents for the value of the Egyptian grain, and 1000 more for the contribution of the Arabians, and if we are allowed to value the gratuities from the Persians, the Ethiopians, and the Colchians, at 2000 more, that is 3700 talents in addition, the aggregate will be about £.3,650,000, or somewhat more than three millions and a half of our money.—Rennel.
satrapies, and the impost on each. Persia is the only province which I have not mentioned as tributary. The Persians are not compelled to pay any specific taxes, but they present a regular gratuity. The Æthiopians who border upon Egypt, subdued by Cambyses in his expedition against the Æthiopian Macrobiians, are similarly circumstanced, as are also the inhabitants of the sacred town of Nyssa, who have festivals in honour of Bacchus. These Æthiopians, with their neighbours, resemble in their customs the Calantian Indians: they have the same rites of sepulture, and their dwellings are subterraneous. Once in every three years these two nations present to the king two chenices of gold unrefined, two hundred blocks of ebony, twenty large elephants teeth, and five Æthiopian youths; which custom has been continued to my time. The people of Colchos and their neighbours, as far as

109 The same rites of sepulture.]—The word in the text is ἐπιμάζτω, which means grains: to say of two different nations that they use the same grain, seems ridiculous enough. Valenaer proposes to read ἐπιμαζτι. I have followed Valenaer, though I think the transition somewhat violent. To say that they used the same kind of grain, namely Spelt, would make very good sense.

110 The people of Colchos.]—It was the boast of the Colchians, that their ancestors had checked the victories of Sesostris, but they sunk without any memorable effort under the arms of Cyrus, followed in distant wars the standard of the great king, and presented him every fifth year with a hundred boys and as many virgins, the fairest produce of
as mount Caucasus, imposed upon themselves the payment of a gratuity. To this latter place the Persian authority extends; northward of this, their name inspires no respect. Every five years the nations above-mentioned present the king with an hundred youths and an hundred virgins* ¹¹¹, which also has been continued within my remembrance. The Arabians contribute every year frankincense to the amount of a thousand talents.—Independent of the tributes before specified, these were the presents which the king received.

XCVIII. The Indians* procure the great number of golden ingots, which, as I have observed, they

the land. Yet he accepted this gift like the gold and ebony of India, the frankincense of the Arabs, and the negroes and ivory of Æthiopia: The Colchians were not subject to the dominion of a satrap, and they continued to enjoy the name as well as substance of national independence.—Gibbon.

¹¹¹ Hundred virgins.]—The native race of Persians is small and ugly, but it has been improved by the perpetual mixture of Circassian blood. This remark Mr. Gibbon applies to the Persian women in the time of Julian. Amongst modern travellers, the beauty of the Persian ladies is a constant theme of praise and admiration.—T.

* Herodotus's very confined knowledge of India is proved by the extraordinary reports which he has detailed concerning its inhabitants, some of which are highly injurious to the character of that industrious, inoffensive, and highly civilized people.
they present as a donative to the king, in this manner:—That part of India which lies towards the east is very sandy; and indeed, of all nations concerning whom we have any authentic accounts, the Indians are the people of Asia who are nearest to the east, and the place of the rising sun. The part most eastward, is a perfect desert, from the sand. Under the name of Indians many nations are comprehended, using different languages; of these, some attend principally to the care of cattle, others not; some inhabit the marshes, and live on raw fish, which they catch in boats made of reeds, divided at the joint, and every joint 112 makes one canoe. These Indians have cloth made of rushes 113, which having

people. For, with many particulars that are true respecting their customs and manners, he has mixed a greater number that are false, and of such a nature as to brand their characters with a charge of odious and obscene practices, from which they are perfectly free at this time, and were so no doubt then.—Rennel.

112 Every joint.]—This assertion seems wonderful; but Pliny, book xvi. chap. 36, treating of reeds, canes, and aquatic shrubs, affirms the same, with this precaution indeed, “if it may be credited.” His expression is this:—Harundini quidem Indice arborea amplitudo, quales vulgo in templis vidimus.—Spissius mari corpus, feminæ capacius. Navigiorumque etiam vicem praestant (si credimus) singula internodia. The Si credimus is not improbably a sneer at Herodotus.—T.

113 Cloth made of rushes.]—To trace the modern dress back to the simplicity of the first skins, and leaves, and feathers,
ving mowed and cut, they weave together like a mat, and wear in the manner of a cuirass.

XCIX. To the east of these are other Indians, called Padæi \[\text{114}\], who lead a pastoral life, live on raw flesh \[\text{115}\], and are said to observe these customs:

feathers, that were worn by mankind in the primitive ages, if it were possible, would be almost endless; the fashion has been often changed, while the materials remained the same: the materials have been different as they were gradually produced by successive arts, that converted a raw hide into leather, the wool of the sheep into cloth, the web of the worm into silk, and flax and cotton into linen of various kinds. One garment also has been added to another, and ornaments have been multiplied on ornaments, with a variety almost infinite, produced by the caprice of human vanity, or the new necessities to which man rendered himself subject by those many inventions which took place after he ceased to be, as God had created him, upright.—See historical remarks on dress, prefixed to a collection of the dresses of different nations, ancient and modern.

The canoes and dresses here described, will strike the reader as much resembling those seen and described by modern voyagers to the South Seas.—T.

\[\text{114 Padæi.]}\]

Impia nec sævis celebrans convivia mensis
Ultima vicinus Phæbo tenet arva Padæus.

\textit{Tibull.} I, iv. 144.

Herodotus does not appear to have heard of the Ganges, but these Padæi probably inhabited the banks of that river. The Sanscrit and proper name of the Ganges is Padda. Major Rennel is of opinion that these Padæi may answer to the Gangaridae of the later Greek writers.

\[\text{115 On raw flesh.]}\]—Not at all more incredible is the custom
If any man among them be diseased, his nearest connections put him to death, alleging in excuse that sickness would waste and injure his flesh. They pay no regard to his assertions that he is not really ill, but without the smallest compunction deprive him of life. If a woman be ill, her female connections treat her in the same manner. The more aged among them are regularly killed and eaten; but there are very few who arrive at old age, for in case of sickness they put every one to death.

C. There are other Indians, who, differing in manners from the above, put no animal to death,

tom said to be prevalent among the Abyssinians, of eating a slice of meat raw from the living ox, and esteeming it one of the greatest delicacies. The assertion of this fact by Mr. Bruce, the celebrated traveller, excited a clamour against him, and by calling his veracity in question, probably operated, amongst other causes, to the delay of his publication. This very fact, however, is also asserted of the Abyssinians by Lobo and Poncet. If it be allowed without reserve, an argument is deducible from it, to prove that bullock's blood, in contradiction to what is asserted by our historian, in chap. 15 of this book, is not a poison; unless we suppose that the quantity thus taken into the stomach would be too small to produce the effect. Lobo, as well as Bruce, affirms, that the Abyssinians eat beef, not only in a raw state, but reeking from the ox.
death 116, sow no grain, have no fixed habitations, and live solely upon vegetables. They have a particular grain, nearly of the size of millet, which the soil spontaneously produces, which is protected by a calyx, the whole of this they bake and eat. If any of these Indians be taken sick, they retire to some solitude, and there remain, no one expressing the least concern about them during their illness, or after their death.

CI. Among all these Indians whom I have specified, the communication between the sexes* is like that of the beasts, open and unrestrained. They are all of the same complexion, and much resembling the Æthiopians. The semen which their males emit is not, like that of other men, white, but black like their bodies 117, which is also the case with the Æthiopians. These Indians

116 Put no animal to death.]—Nicholas Damascenus has preserved the name of this people. He calls them Aritionians. On this name Mr. Wilkins observes that it may be a corrupt reading of Barrata, or Bharata, which is the Sanscrit name of India. I cannot help thinking Mr. Wilkins a little fanciful on this subject.—Larcher.

See in Melpomene an account of the Issedenes, and in Clio what Herodotus says of the Massagetae.

* See Clio, c. 216.

117 Black like their bodies.]—Semen si probe concoc'tum fuerit, colore album et splendens esse oportet, ut vel hinc pateat quam parum vere Herodotus scribat semen nigrum Æthiopes promere. Rodericus a Castro de universa mulierum medicina.—Aristotle had before said the same thing, in his history of animals.—Larcher.
Thalians are very remote from Persia towards the south*, and were never in subjection to Darius.

CII. There are still other Indians towards the north, who dwell near the city of Caspatyrum, and the country of Pactyica. Of all the Indians these in their manners most resemble the Bactrians; they are distinguished above the rest by their bravery, and are those who are employed in searching for the gold†. In the vicinity of this district there are vast deserts of sand, in which a species of ants118 is produced, not so large

* Thus it appears that Herodotus had a very good idea of the form and extent of the Erythrean sea, but he certainly did not know that India extended so far southward as it actually does.

† See Vincent's Nearchus, p. 70, and Rennel, p. 410.

118 Species of ants.]—Of these ants Pliny also makes mention, in the following terms:

"In the temple of Hercules, at Erythrae, the horns of an Indian ant were to be seen, an astonishing object. In the country of the northern Indians, named Dandæ, these ants cast up gold from holes within the earth. In colour they resemble cats, and are as large as the wolves of Ægypt. This gold, which they throw up in the winter, the Indians contrive to steal in the summer, when the ants, on account of the heat, hide themselves under ground. But if they happen to smell them, the ants rush from their holes, and will often tear them in pieces, though mounted on their swiftest camels; such is the swiftness and fierceness they display from the love of their gold."

Upon the above, Larcher has this remark:—The little com-
large as a dog, but bigger than a fox. Some of these, taken by hunting, are preserved in the palace of the Persian monarch. Like the ants common in Greece, which in form also they nearly resemble, they make themselves habitations in the ground, by digging under the sand. The sand thus thrown up is mixed with gold-dust, to collect which, the Indians are dispatched into the deserts. To this expedition they proceed, each with three camels fastened together, a female being secured between two males, and upon her the Indian is mounted, taking particular care to have one which has recently foaled. The females of this description are in all respects as

munication which the Greeks had with the Indians, prevented their investigating the truth with respect to this animal; and their love of the marvellous inclined them to assent to this description of Herodotus. Demetrius Triclinius says, on the Antigone of Sophocles, doubtless from some ancient Scholiast which he copies, that there are in India winged animals, named ants, which dig up gold. Herodotus and Pliny say nothing of their having wings. Most of our readers will be induced to consider the description of these ants as fabulous; nevertheless, De Thou, an author of great credit, tells us, that Shah Thomas, sophi of Persia, sent, in the year 1559, to Soliman an ant like these here described.

They who had seen the vast nests of the termites, or white ants, might easily be persuaded that the animals which formed them were as large as foxes. The disproportion between the insect, though large, and its habitation, is very extraordinary.—T.

The reader will find an elaborate account of the termites in the Philosophical Transactions for 1781.
as swift as horses, and capable of bearing much greater burdens.

119 Greater burdens.]—Of all the descriptions I have met with of this wonderful animal, the following, from Volney, seems the most animated and interesting:

No creature seems so peculiarly fitted to the climate in which it exists, as the camel. Designing the camel to dwell in a country where he can find little nourishment, nature has been sparing of her materials in the whole of his formation. She has not bestowed upon him the fleshiness of the ox, horse, or elephant, but limiting herself to what is strictly necessary, she has given him a small head without ears, at the end of a long neck without flesh. She has taken from his legs and thighs every muscle not immediately requisite for motion, and in short has bestowed on his withered body only the vessels and tendons necessary to connect its frame together. She has furnished him with a strong jaw, that he may grind the hardest aliments; but, lest he should consume too much, she has straitened his stomach, and obliged him to chew the cud. She has lined his foot with a lump of flesh, which, sliding in the mud, and being no way adapted to climbing, fits him only for a dry, level, and sandy soil, like that of Arabia: she has evidently destined him likewise for slavery, by refusing him every sort of defence against his enemies. So great, in short, is the importance of the camel to the desert, that were it deprived of that useful animal, it must infallibly lose every inhabitant.—Volney.

With respect to the burdens which camels are capable of carrying, Russel tells us, that the Arab camel will carry one hundred rotoloes, or five hundred pounds weight; but the Turcomans camel's common load is one hundred and sixty rotoloes, or eight hundred pounds weight. Their ordinary pace is very slow, Volney says, not more than thirty-six hundred yards in an hour; it is needless to press them, they will go no quicker. Raynal says, that the Arabs qualify the camels for expedition by matches, in which the horse runs against
CIII. As my countrymen of Greece are well acquainted with the form of the camel, I shall not here describe it; I shall only mention those particulars concerning it with which I conceive them to be less acquainted. Behind, the camel has four thigh and as many knee joints; the member of generation falls from between the hinder legs, and is turned towards the tail.

CIV. Having thus connected their camels, the Indians proceed in search of the gold, choosing against him; the camel, less active and nimble, tires out his rival in a long course. There is one peculiarity with respect to camels, which not being generally known, I give the reader, as translated from the Latin of Father Strope, a learned German missionary. "The camels which have had the honour to bear presents to Mecca and Medina are not to be treated afterwards as common animals; they are considered as consecrated to Mahomet, which exempts them from all labour and service. They have cottages built for their abodes, where they live at ease, and receive plenty of food, with the most careful attention."—T.

120 To be less acquainted.]—These further particulars concerning the camel, are taken from Mr. Pennant.

The one-bunched camel, is the Arabian camel, the two-bunched, the Bactrian. The Arabian has six callosities on the legs, will kneel down to be loaded, but rises the moment he finds the burthen equal to his strength. They are gentle always, except when in heat, when they are seized with a sort of madness, which makes it unsafe to approach them. The Bactrian camel is larger and more generous than the domesticated race. The Chinese have a swift variety of this, which they call by the expressive name of Fong Kyo Fo, or camels with feet of the wind.
the hottest time of the day as most proper for their purpose, for then it is that the ants conceal themselves under the earth. In distinction from all other nations, the heat with these people is greatest, not at mid-day, but in the morning. They have a vertical sun till about the time when with us, people withdraw from the forum; during

*People withdraw from the forum.*—The periods of the forum were so exactly ascertained, as to serve for a notation of time. The time of full forum is mentioned by many authors, as Thucydides, Xenophon, Diodorus Siculus, Lucian, and others, and is said by Suidas to have been the third hour in the morning, that is, nine o'clock; and Dio Chrysostom places it at an intermediate point between morning, or sunrise, and noon, which agrees also with nine o'clock. One passage in Suidas speaks also of the fourth, fifth, and sixth hours; but either they were fora of different kinds, or the author is there mistaken, or the passage is corrupt. See Aelian, xii. 30. and Athenaeus, xiv. 1. the time of breaking up the forum, *ἀνοίγειν διαλυσιν,* is not, I believe, mentioned, except here, by Herodotus; but by this passage it appears that it must have been also a stated time, and before noon; probably ten or eleven o'clock. This account of a sun, hotter and more vertical in the morning than at noon, is so perfectly unphilosophical, that it proves decisively, what the hypothesis of our author concerning the overflowing of the Nile gave strong reason to suspect, that Herodotus was entirely uninformed on subjects of this kind. Mid-day, or noon, can be only, at all places, when the sun is highest and consequently hottest, unless any clouds or periodical winds had been assigned as causes of this singular effect. Whoever fabricated the account, which he here repeats, thought it necessary to give an appearance of novelty even to the celestial phenomena of the place.

Herodotus
ring which period the warmth is more excessive than the mid-day sun in Greece, so that the inhabitants are then said to go into the water for refreshment. Their mid-day is nearly of the same temperature as in other places; after which the warmth of the air becomes like the morning elsewhere; it then progressively grows milder, till at the setting sun it becomes very cool.

CV. As soon as they arrive at the spot, the Indians precipitately fill their bags with sand, and return as expeditiously as possible. The Persians say that these ants know and pursue the Indians by their smell, with inconceivable swiftness. They affirm, that if the Indians did not make considerable progress whilst the ants were collecting themselves together, it would be impossible for any of them to escape. For this reason, at different intervals,

Herodotus himself uses the term of πληθωσις ανεξις in book ii. ch. 173, and vii. 223.—T.

Whatever credit Herodotus may be in various respects entitled to, this and other passages demonstrate him to have been grossly ignorant of natural philosophy. He did not believe the earth to be globular. See Melpomene, c. 36. He did not credit the existence of snow in elevated situations in warmer climates; and most unphilosophically indeed does he explain the phenomena of the inundation of the Nile, Euterpe, c. 24. See again, Melpomene, c. 42, his account of the voyage of Nechao. See on the subject Rennel, p. 8.
At different intervals.}—This passage is somewhat perplexing. The reader must remember that the Indian rode upon the female camel, which was betwixt two males. This being the swiftest, he trusted to it for his own personal security; and it may be supposed that he untied one or both of the male camels, as the enemy approached, or as his fears got the better of his avarice.—T.

The knowledge which Herodotus had of India was obtained from the Persians, which, says Dr. Robertson, renders it probable that in the time of the Historian very little intercourse subsisted between Egypt and India.

* See Rennel, p. 166, 7, and 197.

Horses excepted.]—Every thing of moment which is involved in the natural history of the horse, may be found in M. Buffon: but, as Mr. Pennant observes, we may in this country

thalia. 287
much larger than in any other part of the world. Their horses are not so large as the Nisæan horses of Media. They have also a great abundance of gold, which they procure partly by digging, partly from the rivers, but principally by the method above

country boast a variety which no other single kingdom possesses. Most other countries produce but one kind, while ours, by a judicious mixture of the several species, by the happy difference of our soil, and by our superior skill in management, may triumph over the rest of Europe in having brought each quality of this noble animal to the highest perfection. The same author tells us, that the horse is in some places found wild; that these are less than the domestic kinds, of a mouse colour, have greater heads than the tame, their foreheads remarkably arched, go in great herds, will often surround the horses of the Mongals and Kalkas while they are grazing, and carry them away. These are excessively vigilant: a centinel placed on an eminence gives notice to the herd of any approaching danger, by neighing aloud, when they all run off with amazing swiftness. These are sometimes taken by the means of hawks, which fix on their heads, and distress them so as to give the pursuers time to overtake them. In the interior parts of Ceylon is a small variety of the horse, not exceeding thirty inches in height, which is sometimes brought to Europe as a rarity. It may not, in this place, be impertinent to inform the reader, that in the East the riding on a horse is deemed very honourable, and that Europeans are very seldom permitted to do it. In the book of Ecclesiastes, chap. x. ver. 7. we meet with this expression, "I have seen servants on horses," which we may of course understand to be spoken of a thing very unusual and improper.

To conclude this subject, I have only to observe, that the Arabian horses are justly allowed to be the finest in the world in point of beauty and of swiftness, and are sent into all parts to improve the breed of this animal.—T.
above described. They possess likewise a kind of plant, which, instead of fruit, produces wool¹²⁴, of a finer and better quality than that of sheep: of this the natives make their cloaths.

CVII. The last inhabited country towards the south, is Arabia, the only region of the earth which produces frankincense¹²⁵, myrrh, cinnamon¹²⁶, casia¹²⁷, and ledanum¹²⁸. Except the myrrh,

¹²⁴ Produces wool.]—This was doubtless the cotton shrub, called by the ancients byssus. This plant grows to the height of about four feet: it has a yellow flower, streaked with red, not unlike that of the mallow; the pistil becomes a pod of the size of a small egg; in this are from three to four cells, each of which, on bursting, is found to contain seeds involved in a whitish substance, which is the cotton. The time of gathering the cotton is when the fruit bursts, which happens in the months of March and April. The scientific name of this plant is gossypium.—T.

¹²⁵ Frankincense.]—This, of all perfumes, was the most esteemed by the ancients; it was used in divine worship, and was in a manner appropriated to princes and great men. Those employed in preparing it were naked, they had only a girdle about their loins, which their master had the precaution to secure with his own seal.—T.

¹²⁶ Cinnamon]—is a species of laurel, the bark of which constitutes its valuable part. This is taken off in the months of September and February. When cut into small slices, it is exposed to the sun, the heat of which curls it up in the form in which we receive and use it. The berry, when boiled in water, yields, according to Raynal, an oil, which, suffered

¹²⁷—¹²⁸ For these notes, see next page.

Vol. II. U
myrrh, the Arabians obtain all these aromatics without any considerable trouble. To collect the frankincense, they burn under the tree which produces it a quantity of the styrax, which the Phœnicians export into Greece; for these trees are each of them guarded by a prodigious number of flying serpents, small of body, and of different colours, which are dispersed by the smoke of the gum. It is this species of serpent which, in an immense body, infests Egypt.

suffered to congeal, acquires a whiteness. Of this, candles are made, of a very aromatic smell, which are reserved for the sole use of the king of Ceylon, in which place it is principally found.—T.

It is now well understood that the substance called cinnamon by the ancients was extremely different from this of ours, which is peculiar to the island of Ceylon. The cinnamon of the ancients, as well as their other spices, ledanum excepted, came most probably through Arabia, from India. These tales of Herodotus were most likely invented by the Arabians, to conceal a fact of such importance to their interest.

127 Casia.]—This is, I believe, a bastard kind of cinnamon, called in Europe cassia lignea; the merchants mix it with true cinnamon, which is four times its value; it is to be distinguished by a kind of viscosity perceived in chewing it.—T.

128 Ledanum.]—Ledanum, or ladanum, according to Pliny, was a gum made of the dew which was gathered from a shrub called lada.—T.

129 Styrax.]—This is the gum of the storax tree, is very aromatic, and brought to this country in considerable quantities from the Archipelago. It is obtained by making incisions in the tree. The Turks adulterate it with saw-dust. Another species of storax is imported to Europe from America, and is procured from the liquid-amber-tree.—T.
CVIII. The Arabians, moreover, affirm, that their whole country would be filled with these serpents, if the same thing were not to happen with respect to them which we know happens, and, as it should seem, providentially, to the vipers. Those animals, which are more timid, and which serve for the purpose of food, to prevent their total consumption are always remarkably prolific, which is not the case with those which are fierce and venomous. The hare, for instance, the prey of every beast and bird, as well as of man, produces young abundantly. It is the singular property of this animal, that it conceives a second time, when it is already pregnant, and at the same time carries in its womb young ones covered with down, others not yet formed,

130 Remarkably prolific.]—See Derham's chapter on the balance of animals, Physico-Theology, b. iv. chap. x. and ch. xiv. § 3.

131 The singular property of this animal.]—With respect to the superfetation of this animal, Pliny makes the same remark, assigning the same reason. Lepus omnium prædæ nascens, solus præter Dasypodem superfetat, aliud educans, aliud in utero pilis vestitum, aliud implume, aliud inchoatum gerens pariter. This doctrine of superfetation is strenuously defended by Sir T. Brown, in his Vulgar Errors; and, as far as it respects the animal in question, is credited by Larcher: but Mr. Pennant very sensibly remarks, that as the hare breeds very frequently in the course of the year, there is no necessity for having recourse to this doctrine to account for their numbers.—T.
formed, others just beginning to be formed, whilst the mother herself is again ready to conceive. But the lioness, of all animals the strongest and most ferocious, produces but one young one in her life, for at the birth of her cub she loses her matrix. The reason of this seems to be, that as the claws of the lion are sharper by much than those of any other animal, the cub, as soon as it begins to stir in the womb, injures and tears the matrix, which it does still more and more as it grows bigger, so that at the time of its birth no part of the womb remains whole.

CIX. Thus, therefore, if vipers and those winged serpents of Arabia were to generate in the ordinary course of nature, the natives could not live. But it happens, that when they are incited by lust to copulate, at the very instant of emission, the female seizes the male by the neck, and does not quit her hold till she has quite devoured it. The male thus perishes, but the female is also punished; for whilst the young are still within the womb, as the time of birth approaches, to make themselves a passage they tear in

---

132 But one young one. This assertion is perfectly absurd and false. The lioness has from two to six young ones, and the same lioness has been known to litter four or five times. —T.

133 Quite devoured it. This narrative must also be considered as intirely fabulous. —T.
in pieces the matrix, thus avenging their father's death. Those serpents which are not injurious to mankind lay eggs, and produce a great quantity of young. There are vipers in every part of the world, but winged serpents are found only in Arabia, where there are great numbers.

CX. We have described how the Arabians procure their frankincense; their mode of obtaining the cassia is this:—they cover the whole of their body, and the face, except the eyes, with skins of different kinds; they thus proceed to the place where it grows, which is in a marsh not very deep, but infested by a winged species of animal much resembling a bat, very strong, and making a hideous noise; they protect their eyes from these, and then gather the cassia.

CXI. Their manner of collecting the cinnamon[14] is still more extraordinary. In what particular

---

[14] Cinnamon.]—The substance of Larcher's very long and learned note on this subject, may, if I mistake not, be comprised in very few words: by cinnamomum the ancients understood a branch of that tree, bark and all, of which the cassia was the bark only. The cutting of these branches is now prohibited, because found destructive of the tree. I have before observed, that of cinnamon there are different kinds; the cassia of Herodotus was, doubtless, what we in general understand to be cinnamon, of which our cassia, or cassia lignea, is an inferior kind.—T.
T H A L I A.

ticular spot it is produced, they themselves are unable to certify. There are some who assert that it grows in the region where Bacchus was educated, and their mode of reasoning is by no means improbable. These affirm that the vegetable substance, which we, as instructed by the Phoenicians, call cinnamon, is by certain large birds

135 *As instructed by the Phoenicians.*—I cannot resist the pleasure of giving at full length the note of Larcher on this passage, which detects and explains two of the most singular and unaccountable errors ever committed in literature.

"The above is the true sense of the passage, which Pliny has mistaken. He makes Herodotus say that the cinnamon and casia are found in the nests of certain birds, and in particular of the phœnix. Cinnamomum et casias, fabulose narravit antiquitas, princepsve Herodotus, avium nidis et privatis phœnicis, in quo situ Liber Pater educatus esset, ex inviis rupibus arboribusque decuti. The above passage from Pliny, Dupin has translated, most ridiculously, 'l'antiquité fabuleuse, et le prince des menteurs, Herodote, disent', &c. He should have said Herodotus first of all, for princeps, in this place, does not mean prince, and menteur cannot possibly be implied from the text of Pliny. Pliny had reason to consider the circumstance as fabulous, but he ought not to have imputed it to our historian, who says no such thing. But the authority of Pliny has imposed not only on Statius,

Phariaque exempta volucri
Cinnama,

where Pharia volucris means the phœnix; and on Avienus,

Internis etiam procul undique ab oris
Ales amica deo largum congesdit amomum;

but also on Van Stapel, in his Commentaries on Theophrastus. Pliny had, doubtless, read too hastily this passage of Herodotus, which is sufficiently clear. Suidas and the Etymologicum Magnum, are right in the word κιναμον."
birds carried to their nests constructed of clay, and placed in the cavities of inaccessible rocks. To procure it thence, the Arabians have contrived this stratagem:—they cut in very large pieces the dead bodies of oxen, asses, or other beasts of burden, and carry them near these nests: they then retire to some distance; the birds soon fly to the spot, and carry these pieces of flesh to their nests, which not being able to support the weight, fall in pieces to the ground. The Arabians take this opportunity of gathering the cinnamon*, which they afterwards dispose of to different countries.

CXII. The ledanum¹³⁶, or, as the natives term it, ladanum, is gathered in a more remarkable

---

* The same cause that allotted a place in Herodotus to the description of the ants that were said to dig up gold in India, and to that of the mode of collecting cinnamon in Arabia, namely, the difficulty of getting at the truth, gave occasion also to the description of the table of the sun in Ethiopia.—Rennel.

The mode here described of getting the cinnamon, resembles in many particulars one of the adventures of Sinbad the Sailor, in the Arabian Nights Entertainments.

¹³⁶ Ledanum.]—The following further particulars concerning this aromatic are taken from Tournefort.

It is gathered by the means of whips, which have long handles, and two rows of straps; with these they brush the plants, and to these will stick the odoriferous glue which hangs on the leaves; when the whips are sufficiently laden...
able manner than even the cinnamon. In itself it is particularly fragrant, though gathered from a place as much the contrary. It is found sticking to the beards of he-goats, like the mucus of trees. It is mixed by the Arabians in various aromatics, and indeed it is with this that they commonly perfume themselves.

CXIII. I have thought it proper to be thus minute on the subject of the Arabian perfumes; and we may add, that the whole of Arabia exhales a most delicious fragrance. There are also in this country two species of sheep, well deserving admiration, and to be found no where else. One of them is remarkable for an enormous length of tail, extending to three cubits, if not more.

with this glue, they take a knife and scrape it clean off the straps.

In the time of Dioscorides, and before, they used to gather the ledanum not only with whips, but they also were careful in combing off such of it as was found sticking to the beards and thighs of the goats, which fed upon nothing but the leaves of the cistus. They still observe the same process; and the Abbé Manite describes it at length in his account of Cyprus.

The ledum is a species of cistus.

137 Enormous length of tail.—The following description of the broad-tailed sheep, from Pennant, takes away from the seeming improbability of this account.

"This species," says Mr. Pennant, "is common in Syria, Barbary, and Ethiopia. Some of their tails end in a point, but
more. If they were permitted to trail them along the ground, they would certainly ulcerate from the friction. But the shepherds of the country are skilful enough to make little carriages, upon which they secure the tails of the sheep: the tails of the other species are of the size of one cubit.

CXIV. Æthiopia, which is the extremity of the habitable world, is contiguous to this country on the south-west. This produces gold in great quantities, elephants with their prodigious teeth, trees and shrubs of every kind, as well as ebony; its inhabitants are also remarkable for their size, their beauty, and their length of life *.

CXV. The above are the two extremes of Asia and Africa. Of that part of Europe nearest to the west, I am not able to speak with decision. I by no means believe that the Barbarians give the name of Eridanus 138 to a river which empties itself

* Herodotus remarks in another place, Melpomene, c. 187, that, whatever may be the cause, the Africans are more exempt from disease than any other men.

138 Eridanus.]—Bellanger was of opinion, that Herodotus intended here to speak of the Eridanus, a river in Italy; Pliny
itself into the Northern Sea, whence, as it is said, our amber comes. Neither am I better acquainted with the islands called the Cassiterides 139, from which we are said to have our tin.

Pliny thought so too, and expresses his surprize that Herodotus should be unable to meet with a person who had seen this river, although part of his life was spent at Thuria, in Magna Graecia.

But this very reflection ought to have convinced both Pliny and Bellanger, that Herodotus had another Eridanus in view.

The Eridanus here alluded to, could not possibly be any other than the Rho-daune, which empties itself into the Vistula, near Danzic, and on the banks of which amber is now found in large quantities.—Larcher.

The historian’s want of information on this matter, could only, as Rennel observes, be occasioned by the jealousy of the Phenicians.

139 Cassiterides.—Pliny says these islands were thus called from their yielding abundance of lead; Strabo says, that they were known only to the Phenicians; Larcher is of opinion that Great Britain was in the number of these.

The Phenicians, who were exceedingly jealous of their commerce, studiously concealed the situation of the Cassiterides, as long as they were able; which fully accounts for the ignorance so honestly avowed by Herodotus. Camden and d’Anville agree in considering the Scilly Isles as undoubtedly the Cassiterides of the ancients. Strabo makes them ten in number, lying to the north of Spain; and the principal of the Scilly isles are ten, the rest being very inconsiderable. Dionysius Periegetes expressly distinguishes them from the British isles:

Yet
The name Eridanus is certainly not barbarous, it is of Greek derivation, and, as I should conceive, introduced by one of our poets. I have endeavoured, but without success, to meet with some one who from ocular observation might describe to me the sea which lies in that part of Europe. It is nevertheless certain, that both our tin and our amber \(^{149}\) are brought from those extreme regions.

Yet it is not an improbable conjecture of his commentator Hill, that the promontory of Cornwall might perhaps at first be considered as another island. Diodorus Siculus describes the carrying of tin from the Cassiterides, and from Britain, to the northern coast of France, and thence on horses to Marseilles, thirty days journey; this must be a new trade established by the Romans, who employed great perseverance to learn the secret from the Phœnicians. Strabo tells us of one Phœnician captain, who finding himself followed by a Roman vessel, purposely steered into the shallows, and thus destroyed both his own ship and the other; his life, however, was saved, and he was rewarded by his countrymen for his patriotic resolution.

Eustathius, in his comment on Dionysius, reckons also ten Cassiterides; but his account affords no new proof, as it is manifestly copied from Strabo, to the text of which author it affords a remarkable correction.—T.

My friend Major Kennel observes, that what is related by Diodorus Siculus concerning the island to which tin was carried at low water, seems to point to Cornwall. The island might be St. Michael's Mount, in Mount's Bay.

\(^{149}\) Amber.—Amber takes its name from ambra, the Arabian name for this substance; the science of electricity is so called from electrum, the Greek word for amber. This term of electricity is now applied not only to the power of attracting
CXVI. It is certain that in the north of Europe* there is a prodigious quantity of gold; but how it is produced I am not able to tell with certainty. It is affirmed indeed, that the Arimaspi †, a people who have but one eye, take this gold away violently from the griffins; but I can never persuade myself that there are any men who, having but one eye, enjoy in all other respects the nature and qualities of other human beings.

tracting lighter bodies, which amber possesses, but to many other powers of a similar nature. Amber is certainly not of the use, and consequently not of the value, which it has been, but it is still given in medicine, and is, as I am informed, the basis of all varnishes. It is found in various places, but Prussia is said to produce the most and the best.—T.

* By the north of Europe, the north-west part of Asia is intended. The Europe of Herodotus is extended indefinitely to the east, Asia being placed to the south rather than to the east of Europe.

† Of this fable, Milton makes a happy use in his second book of Paradise Lost:

As when a griffin thro’ the wilderness
With winged course, o’er hill or mossy dale,
Pursues the Arimaspian, who by stealth
Had from his wakeful custody purloined
The guarded gold.

Lucan speaks of the Arimaspians as a people who ornamented their hair with gold.

Auroque ligatas
Substringens Arimaspe comas.

Pliny relates the same fable with Herodotus. See Nat. Hist. l. vii. c. 2. See again Melpomene, 13 and 27.
beings. Thus much seems unquestionable, that these extreme parts of the world contain within themselves things the most beautiful as well as rare.

CXVII. There is in Asia a large plain, surrounded on every part by a ridge of hills, through which there are five different apertures. It formerly belonged to the Chorasmians, who inhabit those hills in common with the Hyrcanians, Parthians, Sarangensians, and Thomaneans; but after the subjection of these nations to Persia, it became the property of the great king. From these surrounding hills there issues a large river called Aces*: this formerly, being conducted through the openings of the mountain, watered the several countries above mentioned. But when these regions came under the power of the Persians, the apertures were closed, and gates placed at each of them, to prevent the passage of the river. Thus on the inner side, from the waters

* This story, so improbably told, seems to relate either to the river Oxus, or to the Ochus, both of which have undergone considerable changes in their courses, partly by the management of dams, partly by their own depositions, for they certainly flow near the countries of the Chorasmians, the Hyrcanians, and Parthians; but the Sarangèans, if taken for the people of Zarang, that is Segistan, as no doubt they ought to be, are out of the question as to any connection with these rivers.—Rennell.
ters having no issue, this plain became a sea, and
the neighbouring nations, deprived of their ac-
customed resource, were reduced to the extremest
distress from the want of water. In winter they,
in common with other nations, had the benefit of
the rains, but in summer, after sowing their mil-
let and sesamum, they required water but in vain.
Not being assisted in their distress, the inha-
bitants of both sexes hastened to Persia, and pre-
senting themselves before the palace of the king,
made loud complaints. In consequence of this,
the monarch directed the gates to be opened to-
wards those parts where water was most imme-
diately wanted; ordering them again to be closed
after the lands had been sufficiently refreshed:
the same was done with respect to them all, be-
ginning where moisture was wanted the most.
I have, however, been informed, that this is only
granted in consideration of a large donative
above the usual tribute.

CXVIII. Intaphernes, one of the seven who
had conspired against the magus, lost his life
from the following act of insolence. Soon after
the death of the usurpers, he went to the palace,
with the view of having a conference with the
king; for the conspirators had mutually agreed,
that, except the king should happen to be in bed
with his wife, they might any of them have ac-
cess to the royal presence, without sending a pre-
vious
vious messenger. Intaphernes, not thinking any introduction necessary, was about to enter, but the porter and the introducing officer* prevented him, pretending that the king was retired with one of his wives. He, not believing their assertion, drew his sword, and cut off their ears and noses; then taking the bridle from his horse, he tied them together, and so dismissed them.

CXIX. In this condition they presented themselves before the king, telling him why they had been thus treated. Darius, thinking that this might have been done with the consent of the other conspirators, sent for them separately, and desired to know whether they approved of what had happened. As soon as he was convinced that Intaphernes had perpetrated this deed without any communication with the rest, he ordered him, his son, and all his family, to be taken into custody; having many reasons to suspect, that in concert with his friends he might excite a sedition: he afterwards commanded them all to be put in chains, and prepared for execution. The wife of Intaphernes then presented herself before the royal palace, exhibiting every demonstration of

* Introducing officer.]—This was an officer of the highest rank in the empire, as appears from both Cornelius Nepos and Ælian.
of grief*. As she regularly continued this conduct, her frequent appearance at length excited the compassion of Darius; who thus addressed her by a messenger: "Woman, king Darius " offers you the liberty of any individual of your " family, whom you may most desire to pre- " serve." After some deliberation with herself, she made this reply: "If the king will grant me " the life of any one of my family, I choose my " brother in preference to the rest." Her de- " termination greatly astonished the king; he sent to her therefore a second message to this effect: " The king desires to know why you have thought " proper to pass over your children and your " husband, and to preserve your brother; who " is certainly a more remote connection than " your children, and cannot be so dear to you " as

* Grief.]—Bruce amuses himself and his readers with drawing a parallel between the manners of the Abyssinians and those of the ancient Persians. In one place he goes so far as to intimate that Abyssinia might not improbably have been colonized from Persia.—But he here exhibits a notable proof of his extreme carelessness and inaccuracy; for in referring to this passage, after telling us, that in Abyssinia it was the custom for suppliants to crowd round the royal palace with noisy complaints of their grievances, he says Herodotus tells us that in Persia the people in great crowds and of both sexes come roaring and crying to the doors of the palace, and Intaphernes is also said to come to the door of the king making great lamentations.

Herodotus expressly says it was the wife of Intaphernes; Intaphernes himself was in chains.
"as your husband?" She answered thus: "O king! if it please the deity, I may have another husband; and if I be deprived of these, may have other children; but as my parents are both of them dead, it is certain that I can have no other brother." The answer appeared

"I can have no other brother."—This very singular and, I do not scruple to add, preposterous sentiment, is imitated very minutely by Sophocles, in the Antigone. That the reader may the better understand, by comparing the different application of these words, in the historian and the poet, I shall subjoin a part of the argument of the Antigone.

Eteoeles and Polynices were the sons of Oedipus, and successors of his power; they had agreed to reign year by year alternately; but Eteoeles breaking the contract, the brothers determined to decide the dispute in a single combat; they fought, and mutually slew each other. The first act of their uncle Creon, who succeeded to the throne, was to forbid the rites of sepulture to Polynices, denouncing immediate death upon whoever should dare to bury him. Antigone transgressed this ordinance, and was detected in the fact of burying her brother; she was commanded to be interred alive; and what follows is part of what is suggested by her situation and danger:

And thus, my Polynices, for my care
Of thee, I am rewarded, and the good
Alone shall praise me: for a husband dead,
Nor, had I been a mother, for my children
Would I have dar'd to violate the laws.—
Another husband and another child
Might sooth affliction; but, my parents dead,
A brother's loss can never be repair'd.

Franklin's Sophocles.

The reader will not forget to observe, that the piety of Antigone is directed to a lifeless corpse, but that of the wife of

Vol. II. X Intaphernes
peared to Darius very judicious; indeed he was so well pleased with it, that he not only gave the woman the life of her brother, but also pardoned her eldest son: the rest were all of them put to death. Thus, at no great interval of time, perished one of the seven conspirators.

CXX. About the time of the last illness of Cambyses, the following accident happened. The governor of Sardis was a Persian, named Orœtes*, who had been promoted by Cyrus. This man conceived the atrocious design of accomplishing the death of Polycrates of Samos, by whom he had never in word or deed been injured, and whose person he never had beheld. His assigned motive was commonly reported to be this: Orœtes one day sitting at the gates of the Intaphernes to her living brother, which is surely less repugnant to reason, and the common feelings of the human heart, not to speak of the superior claims of duty.

There is an incident similar to this in Lucian:—See the tract called Toxaris, or Amicitia, where a Scythian is described to neglect his wife and children, whilst he incurs the greatest danger to preserve his friend from the flames. “Other children,” says he, “I may easily have, and they are at best but a precarious blessing; but such a friend I could no where obtain.”—T.

* Historians are not quite agreed about the name of this man. He is called by some Oroutes. See Valerius Maximus, book 6. chap. 9. Comprehensum enim Orontes Darii Regis Praefectus in excelsissimo montis vertice cruci affixit. Lucian, however, in more than one place calls him Orontes.
the palace\(^{142}\) with another Persian, whose name was Mitrobates, governor of Dascylium, entered into a conversation with him, which at length terminated in dispute. The subject about which they contended was military virtue: "Can you," says Mitrobates to Oroetes, "have any pretensions to valour, who have never added Samos to the dominions of your master, contiguous as it is to your province; and which indeed may so easily be taken, that one of its own citizens made himself master of it, with the help of fifteen men in arms, and still retains the supreme authority?" This made a deep impression upon the mind of Oroetes; but without meditating revenge against the person who had affronted him, he determined to effect the death of Polycrates, on whose account he had been reproached.

\(^{142}\) At the gates of the palace.\)—In the Greek it is at the king's gate. The grandees waited at the gate of the Persian kings:—This custom, established by Cyrus, continued as long as the monarchy, and at this day, in Turkey, we say the Ottoman port, for the Ottoman court.—Larcher.

Ignorance of this custom has caused several mistakes, particularly in the history of Mordecai, in the book of Esther, who is by many authors, and even by Prideaux, represented as meanly situated when placed there. Many traces of this custom may be found in Xenophon's Cyropædia. Plutarch, in his life of Themistocles, uses the expression of those at the king's gate, \(τοὺς ἐπὶ θυρήσις διακρινούς\), as a general designation for nobles and state officers.—See Brisson, de Regno Persarum, lib. i.—T.
There are some, but not many, who affirm that Oroetes sent a messenger to Samos, to propose some question to Polycrates, but of what nature is unknown; and that he found Polycrates in the men's apartment, reclining on a couch, with Anacreon of Teos\textsuperscript{143} by his side. The man advanced to deliver his message; but Polycrates, either by accident, or to demonstrate the contempt\textsuperscript{144} in which he held Oroetes, continued

\textsuperscript{143} Anacreon of Teos.]—It is by no means astonishing to find, in the court of a tyrant, a poet who is eternally singing in praise of wine and love: his verses are full of the encomiums of Polycrates. How different was the conduct of Pythagoras! That philosopher, perceiving that tyranny was established in Samos, went to Ægypt, and from thence to Babylon, for the sake of improvement: returning to his country, he found that tyranny still subsisted; he went therefore to Italy, and there finished his days.—\textit{Larcher.}

This poet was not only beloved by Polycrates, he was the favourite also of Hipparchus the Athenian tyrant. And, notwithstanding the inference which \textit{Larcher} seems inclined to draw, from contrasting his conduct with that of Pythagoras, he was called σεφος by Socrates himself; and the terms νφος και αγαθος, are applied to him by Athenæus. By the way, much as has been said on the compositions of Anacreon by II. Stephens, Scaliger, M. Dacier, and others, many of the learned are in doubt whether the works ascribed to him by the moderns are genuine. Anacreontic verse is so called, from its being much used by Anacreon; it consists of three iambic feet and a half, of which there is no instance in the Lyrics of Horace.—See the Prolegomena to \textit{Barnes's Anacreon, §. 12.}

\textsuperscript{144} Demonstrate the contempt.]—This behaviour of Polycrates, which was doubtless intended to be expressive of contempt,
continued all the time he was speaking with his face towards the wall, and did not vouchsafe any reply.

CXXII. These are the two assigned motives for the destruction of Polycrates: every one will prefer that which seems most probable. Oeretes, who lived at Magnesia, which is on the banks of the Maeander,45, sent Myrsus the Lydian, son of Gyges, with a message to Polycrates at Samos. With the character of Polycrates, Oeretes was well acquainted; for, except Minos146 the Cnos- sian, or whoever before him accomplished it, he was the first Greek who formed the design of making himself master of the sea. But as far as historical tradition may be depended upon, Polycrates is the only individual who projected the subjection of Ionia and the islands. Perfectly aware of these circumstances, Oeretes sent this message:

"Oeretes contempt, brings to mind the story of Charles the Twelfth of Sweden, who at an interview with the Grand Vizier, expressed his contempt and indignation by tearing the minister's robe with his spur, and afterwards leaving the apartment without saying a word.

145 On the banks of the Mæander.]—This is added in order to distinguish that city from the Magnesia on the Sipylius, lying between Sardes and Phocæa.

146 Except Minos.]—What Herodotus says of the maritime power of Minos, is confirmed by Thucydides and Diodorus Siculus. His testimony concerning Polycrates is supported also by Thucydides and Strabo.—Larcher.
"Orœtes to Polycrates.

"I understand that you are revolving some vast project in your mind, but have not money responsible to your views. Be advised by me, and you will at the same time promote your own advantage and preserve me. I am informed, and I believe it to be true, that king Cambyses has determined on my death. Receive, therefore, me with my wealth, part of which shall be at your disposal, part at mine: with the assistance of this you may easily obtain the sovereignty of Greece. If you have any suspicions, send to me some one who is in your intimate confidence, and he shall be convinced by demonstration."

CXXIII. With these overtures, Polycrates was so exceedingly delighted, that he was eager to comply with them immediately, for his love of money was excessive. He sent, first of all, to examine into the truth of the affair, Mæandrius his secretary, called so after his father. This Mæandrius, not long afterwards, placed as a sacred donative in the temple of Juno, the rich furniture of the apartment of Polycrates. Orœtes, knowing the motive for which this man came, contrived and executed the following artifice: He filled eight chests nearly to the top with stones, then covering over the surface with gold, they
they were tied together, as if ready to be removed. Mæandrius on his arrival saw the above chests, and returned to make his report to Polycrates.

CXXIV. Polycrates, notwithstanding the predictions of the soothsayers, and the remonstrances of his friends, was preparing to meet Orætes, when his daughter in a dream saw this vision: She beheld her father aloft in the air, washed by Jupiter, and anointed by the sun. Terrified by this

147 Tied together.]—Before the use of locks, it was the custom in more ancient times to secure things with knots: of these some were so difficult, that he alone who possessed the secret was able to unravel them. The famous Gordian knot must be known to every one; this usage is often also alluded to by Homer:

Then bending with full force, around he roll'd
A labyrinth of bands in fold on fold,
Clos'd with Circaean art.

According to Eustathius, keys were a more modern invention, for which the Lacedæmonians are to be thanked.

Upon the above passage from Eustathius, Larcher remarks, that it is somewhat singular, that the Lacedæmonians, whose property was in common, should be the inventors of keys.

The version of Pope which I have given in the foregoing lines, is very defective, and certainly inadequate to the expression of

Αυτικ' επητευε πωμα, θοως δ' ιτι δεσμον ηλε
Παικλον, ου ποτε μω δοιαι φρεσι ποτια Κιρκη.—I'.
this incident, she used every means in her power to prevent his going to meet Orcetes; and as he was about to embark for this purpose, on board a fifty-oared galley, she persisted in auguring unfavourably of his expedition. At this he was so incensed, as to declare, that if he returned safe she should remain long unmarried. To this she expressed herself very desirous to submit; being willing to continue long a virgin, rather than be deprived of her father.

CXXV. Polycrates, disregarding all that had been said to him, set sail to meet Orcetes. He was accompanied by many of his friends, and amongst the rest by Democedes, the son of Calliphon;

145 Long a virgin.]—To die a virgin, or without having any children, was amongst the ancients esteemed a very serious calamity. Electra in Sophocles enumerates this in the catalogue of her misfortunes:

\[
\text{\underline{A\textiter{τεκνός}}}
\]
\[
\text{T\textit{αλάιν', ἀνυμφέως αἰνὶ οἰκτῶ}.—166.}
\]

Electra makes a similar complaint, in the Orestes of Euripides; as does also Polyxena at the point of death, in the Hecuba of Euripides.—\(T\).

146 Democedes.]—Of this personage, a farther account is given in the fourth book. He is mentioned also by Ælian, in his Various History, book viii. chap. 17; and also by Athenæus, book xii. chap. 4. which last author informs us, that the physicians of Crotona were, on account of Democedes, esteemed the first in Greece.—See also chap. 131, of this book.—\(T\).
Calliphon; he was a physician of Crotona, and the most skilful practitioner of his time. As soon as Polycrates arrived at Magnesia, he was put to a miserable death, unworthy of his rank and superior endowments. Of all the princes who ever reigned in Greece, those of Syracuse alone excepted, none equalled Polycrates in magnificence. Oretes, having basely put him to death, fixed his body to a cross; his attendants he sent back to Samos, telling them, "They ought to be thankful, that he had not made them slaves." The strangers, and the servants of those who had accompanied Polycrates, he detained in servitude. The circumstance of his being suspended on a cross, fulfilled the vision of the daughter of Polycrates: for he was washed by Jupiter, that is to say, by the rain, and he was anointed by the sun, for it extracted the moisture from his body. The great prosperity of Polycrates

*150 Put him to death.*—The Persians generally beheaded or flayed those whom they crucified: see an account of their treatment of Histiaeus, book vi. chap. 30, and of Leonidas, book vii. 238.—T.

The beautiful and energetic lines which Juvenal applied to Sejanus, are remarkably apposite to the circumstances and fate of Polycrates:

Qui inimios optabat honores,
Et nimias poscebat opes, numerosa parabat
Excelsae turris tabulata, unde altior esset
Casus, et impulsae praecepis immane ruinae,
crates terminated in this unfortunate death, which indeed had been foretold him by Amasis king of Ägypt.

CXXVI. But it was not long before Orcetes paid ample vengeance to the manes of Polycrates. After the death of Cambyses, and the usurpation of the magi, Orcetes, who had never deserved well of the Persians, whom the Medes had fraudulently deprived of the supreme authority, took the advantage of the disorder of the times 151, to put to death Mitrobates, the governor of Dascylium, and his son Cranapes. Mitrobates was the person who had formerly reproached Orcetes; and both he and his son were highly esteemed in Persia. In addition to his other numerous and atrocious crimes, he compassed the death of a messenger, sent to him from Darius, for no other reason but because the purport of the message was not agreeable to him. He ordered the man to be way-laid in his return, and both he and his horse were slain, and their bodies concealed.

CXXVII. As soon as Darius ascended the throne, he determined to punish Orcetes for his various enormities, but more particularly for the murder

151 Disorder of the times.—For εν ταυτη τη αξιν, which prevailed in preceding editions, Wesseling proposes to read εν ταυτη ταξιν, which removes all perplexity.—T.
murder of Mitrobates and his son. He did not think it prudent to send an armed force openly against him, as the state was still unsettled, and as his own authority had been so recently obtained; he was informed, moreover, that Orætes possessed considerable strength: his government extended over Phrygia, Lydia, and Ionia, and he was regularly attended by a guard of a thousand men. Darius was, therefore, induced to adopt this mode of proceeding: He assembled the noblest of the Persians, and thus addressed them: "Which of you, O Persians! will undertake for me the accomplishment of a project which requires sagacity alone, without military aid, or any kind of violence? for where wisdom is required, force is of little avail;—which of you will bring me the body of Orætes, alive or dead? He has never deserved well of the Persians; and, in addition to his numerous crimes, he has killed two of our countrymen, Mitrobates and his son. He has also, with intolerable insolence, put a messenger of mine to death: we must prevent, therefore, his perpetrating any greater evils against us, by putting him to death."

CXXVIII. When Darius had thus spoken, thirty Persians offered to accomplish what he wished. As they were disputing on the subject, the king ordered the decision to be made by lot; which
which fell upon Bagæus, the son of Artontes. To attain the end which he proposed, he caused a number of letters to be written on a variety of subjects, and sealing them with the seal of Darius, he proceeded with them to Sardis. As soon as he came to the presence of Orœtes, he delivered the letters one by one to the king’s secretary; one of whom is regularly attendant upon the governors of provinces. The motive of Bagæus in delivering the letters separately was to observe the disposition of the guards, and how far they might be inclined to revolt from Orœtes. When he saw that they treated the letters with great respect:\footnote{152 Treated the letters with great respect.} and their contents with still greater, he delivered one to this effect: “Persians, king Darius forbids you serving any longer Orœtes as guards:” in a moment they threw down their arms. Bagæus, observing their prompt obedience in this instance, assumed still greater confidence, he delivered the last of his letters, of which these were the contents: “King Darius commands the Persians who are at Sardis to put Orœtes to death:” without hesitation

\footnote{152 Treated the letters with great respect.}—At the present period, the distinction observed with regard to letters in the East is this: those sent to common persons are rolled up, and not sealed; those sent to noblemen and princes are sealed up, and inclosed in rich bags of silk or satin curiously embroidered.—\textit{T}.\end{footnote}
tation they drew their swords and killed him. In this manner was the death of Polycrates of Samos revenged on Orœtes the Persian.

CXXIX. Upon the death of Orœtes, his effects were all removed to Susa. Not long after which, Darius, as he was engaged in the chase, in leaping from his horse, twisted his foot with so much violence, that the ankle-bone was dislocated. Having at his court some Ægyptians, supposed to be the most skilful of the medical profession, he trusted to their assistance. They, however, increased the evil, by twisting and otherwise violently handling the part affected: from the extreme pain which he endured, the king passed seven days and as many nights without sleep. In this situation, on the eighth day, some one ventured to recommend Democedes of Crotona, having before heard of his reputation at Sardis. Darius immediately sent for him: he was discovered amongst the slaves of Orœtes, where he had continued in neglect, and was brought to the king just as he was found, in chains and in rags.

CXXX. As soon as he appeared, Darius asked him if he had any knowledge of medicine? In the apprehension that if he discovered his art, he should never have the power of returning to Greece, Democedes for a while dissembled; which
which Darius perceiving, he ordered those who had brought him to produce the instruments of punishment and torture. Democedes began then to be more explicit, and confessed that, although he possessed no great knowledge of the art, yet by his connection with a physician he had obtained some little proficiency. The management of the case was then intrusted to him; he accordingly applied such medicines and strong fomentations as were customary in Greece; by which means Darius, who began to despair of ever recovering the entire use of his foot, was not only enabled to sleep, but in a short time perfectly restored to health. In acknowledgment of his cure, Darius presented him with two pair of fetters of gold: upon which Democedes ventured to ask the king, whether, in return for his restoring him to health, he wished to double his calamity 153? The king, delighted with the reply,

153 *Double his calamity.*—The ancients were very fond of this play upon words:—See, in the Septem contra Thebas of Æschylus, a play on the word Polynices:

Oί ἰδίος φθόνος κατ' επώνυμην
Καὶ πολυφωνίκης
Ọλοντ' αἰείσθεν διαίσισι.—v. 835.

The particular point in this passage is omitted by Mr. Potter, probably because he did not find it suited to the genius of the English language.

See also Ovid's description of the flower:

Ipse suos gemitus foliis inscribit et ai ai
Flos habet inscriptum. T.
ply, sent the man to the apartments of his women: the eunuchs who conducted him informed them, that this was the man who had restored the king to life; accordingly, every one of them taking out a vase of gold 154, gave it to Democedes with the case. The present was so very valuable, that a servant who followed him behind, whose name was Scitón, by gathering up the staters which fell to the ground, obtained a prodigious sum of money.

CXXXI. The following incident was what induced Democedes to forsake Crotona, and attach himself to Polycrates. At Crotona he suffered continual restraint from the austere temper of his father; this becoming insupportable, he left him, and went to Ægina. In the first year of his residence at this place, he excelled the most skilful

154 Taking out a vase of gold.]—This is one of the most perplexed passages in Herodotus; and the conjectures of the critics are proportionably numerous. The great difficulty consists in ascertaining what is designed by ἵπποντικα and βάρη. The φαλαρ appears to have been a jar or vase, probably itself of gold. Few have doubted that the passage is corrupt: the best conjectural reading gives this sense, "that each, taking gold out of a chest in a vase (φαλαρ), gave it. vase and all, to Democedes. ἵπποντικα is thus made to signify plunging the vase among the gold to fill it, as a pitcher into water; which sense is confirmed by good authorities. The idea more immediately excited by the word is, that they struck the bottom of the vase to shake out all the gold; but according to this interpretation, the vase itself is the βάρη, or case.—T.
skilful of the medical profession, without having had any regular education, and indeed without the common instruments of the art. His reputation, however, was so great that, in the second year, the inhabitants of Ægina, by general consent, engaged his services at the price of one talent. In the third year, the Athenians retained him, at a salary of one hundred minæ; and in the

155 One hundred minæ.]—Valcnnaer suspects that this place has been altered by some copyists. Athens, in the time of its greatest splendour, allowed their ambassadors but two drachmæ a day; and a hundred drachmæ make but one mina. If when the Athenians were rich, they gave no more to an ambassador, how is it likely that, when they were exceedingly poor, they should give a hundred minæ to a physician? Thus far Valcnnaer. From this and other passages in the ancient writers, it appears that in remoter times it was usual to hire physicians for the assistance of a whole city by the year. The fees which were given physicians for a single incidental visit, were very inconsiderable, as appears from the famous verses of Crates, preserved by Diogenes Laertius,

Τίθει μαγείαν μιᾶς δεκ', ιατρῇ δέκαχμην
Κόλαξι τάλαντα πέντε, συμβέλου κατίδιν,
Πόργη τάλαντον, φιλοσόφῳ τριάδολον.

"To a cook 30l.; to a physician two groats; to a flatterer 900l.; to a counsellor nothing; to a whore 180l.; to a philosopher a groat." The above is supposed to describe part of the accounts of a man of fortune. See Arbuthnot on Coins, p. 198.—The yearly pension paid Democedes the physician, by the Athenians, was one hundred minæ, or 322l. 18s. 4d. The Eginetæ paid him yearly the pension of a talent, or 193l. 15s. He had a pension from Polycrates of Samos of two talents, 387l. 10s.
the fourth year Polycrates engaged to give him two talents. His residence was then fixed at Samos; and to this man the physicians of Crotona are considerably indebted for the reputation which they enjoy; for at this period, in point of medical celebrity, the physicians of Crotona held the first, and those of Cyrene, the next place. At this time also the Argives had the credit of being the most skilful musicians of Greece.

CXXXII. Democedes having in this manner restored the king to health, had a sumptuous house provided him at Susa, was entertained at the king’s own table, and, except the restriction of not being able to return to Greece, enjoyed all that he could wish. The Egyptian physicians, who, before this event, had the care of the king’s health, were on account of their inferiority to Democedes, a Greek, condemned to the cross, but he obtained their pardon. He also procured the liberty of an Elean soothsayer, who having followed Polycrates was detained and neglected among

The daily allowance of two drachmae to an ambassador is 15d. or 23l. 11s. 5½d. per annum. All that can be said of the difference is the high opinion entertained of a skilful physician both at Athens and in Persia.—T.

156 Musicians.]—Music was an important part of Grecian education. Boys till they were ten years old were taught to read by the grammataistes; they were then taught music three years by the citharistae; after the thirteenth year they learned the gymnastic exercises, under the care of the paidotades.—T.
among his other slaves. It may be added, that Democedes remained in the highest estimation with the king.

CXXXIII. It happened not long afterwards, that Atossa, daughter of Cyrus, and wife of Darius, had an ulcer on her breast, which finally breaking, spread itself considerably. As long as it was small, she was induced by delicacy to conceal it; but when it grew more troublesome, she sent for Democedes, and shewed it to him. He told her he was able to cure it; but exacted of her an oath, that in return she should serve him in whatever he might require, which he assured her, should be nothing to disgrace her

CXXXIV. Atossa was cured by his skill, and, observant of her own promise and his instructions, she took the opportunity of thus addressing Darius, while she was in bed with him: "It is wonderful, my lord, that having such a numerous army at command, you have neither increased the power of Persia, nor at all extended your dominions. It becomes a man like you, in the vigour of your age, and master of so many and such powerful resources, to perform some act which may satisfy the Persians of the spirit and virtue of their prince. There are two reasons which give importance to what I recommend:—The one, that your subjects may venerate the manly accomplishments of their master: the other, that you may prevent the
"indolence of peace exciting them to tumult and sedition. Do not therefore consume your youth in inactivity, for the powers of the mind increase and improve with those of the body; and in like manner as old age comes on they become weaker and weaker, till they are finally blunted to every thing." "What you say," answered Darius, "coincides with what was passing in my mind. I had intended to make war against Scythia, and to construct a bridge to unite our continent with the other; which things shall soon be executed." Will it not, Sir," returned Atossa, "be better to defer

*57 Powers of the mind.]-—This opinion is thus expressed by Lucretius, which I give the reader from the version of Creech.

Besides, 'tis plain that souls are born and grow,
And all by age decay as bodies do:
To prove this truth, in infants, minds appear
Infirm and tender, as their bodies are;
In man the mind is strong; when age prevails,
And the quick vigour of each member fails,
The mind's pow'rs too decrease and waste apace,
And grave and reverend folly takes the place. T.

*58 What you say.]-—I have not translated ο γυνai, which is in the original, because I do not think we have any correspondent word in our language. O woman! would be vulgar; and according to our norma loquendi, O wife! would not be adequate. In the Ajax of Sophocles, v. 293, γυνai is used to express contempt; but in the passage before us it certainly denotes tenderness. The address of our Saviour to his mother proves this most satisfactorily.—See also Homer.
fer your intentions against the Scythians, who
will at any time afford you an easy conquest?
Rather make an expedition against Greece: I
wish much to have for my attendants some
women of Sparta, Argos, Athens, and Co-
rinth, of whom I have heard so much. You
have, moreover, in the man who healed the
wound of your foot, the person of all others the
best qualified to describe and explain to you
every thing which relates to Greece." "If it
be your wish," replied Darius, "that I should
first make a military excursion against Greece,
it will be proper to send previously thither some
Persians as spies, in company with the man to
whom you allude. As soon as they return,
and shall have informed me of the result of
their observations, I will proceed against
Greece."

CXXXV. Darius having delivered his senti-
ments, no time was lost in fulfilling them. As
soon as the morning appeared, he sent for fifteen
Persians of approved reputation, and com-
manded them, in company with Democedes, to
examine every part of the sea-coast of Greece,
enjoining them to be very watchful of Demo-
cedes, and by all means to bring him back with
them. When he had done this, he next sent for
Democedes himself, and after desiring him to
examine and explain to the Persians every thing
which related to Greece, he entreated him to
return in their company. All the valuables which
he
he possessed, he recommended him to take, as presents to his father and his brethren, assuring him that he should be provided with a greater number on his return. He moreover informed him, that he had directed a vessel to accompany him, which was to be furnished with various things of value. In these professions Darius, as I am of opinion, was perfectly sincere; but Democedes, apprehending that the king meant to make trial of his fidelity, accepted these proposals without much acknowledgement. He desired, however, to leave his own effects, that they might be ready for his use at his return; but he accepted the vessel which was to carry the presents for his family. Darius, after giving these injunctions to Democedes, dismissed the party to prosecute their voyage.

CXXXVI. As soon as they arrived at Sidon, in Phœnicia, they manned two triremes, and loaded a large transport with different articles of wealth; after this, they proceeded to Greece, examining the sea-coasts with the most careful attention. When they had informed themselves of the particulars relating to the most important places in Greece, they passed over to Tarentum in Italy. Here Aristophilides, prince of Tarentum, and a native

159 Tarentum.]—These places, with the slightest variation possible, retain their ancient names. We now say the gulph of Tarento; and Crotona is now called Cottrone.—T.
native of Crotona, took away the helms of the Median vessels, and detained the Persians as spies. Whilst his companions were in this predicament, Democedes himself went to Crotona. Upon his arrival at his native place, Aristophilides gave the Persians their liberty, and restored what he had taken from them.

CXXXVII. The Persians, as soon as they recovered their liberty, sailed to Crotona, in pursuit of Democedes, and meeting with him in the forum, seized his person. Some of the inhabitants, through fear of the Persian power, were willing to deliver him up; others, on the contrary, beat the Persians with clubs; who exclaimed, "Men of Crotona, consider what ye do, in taking away from us a fugitive from our king. Do you imagine that you will derive any advantage from this insult to Darius; will not rather your city be the first object of our hostilities, the first that we shall plunder and reduce to servitude?" These menaces had but little effect upon the people of Crotona, for they not only assisted Democedes to escape, but also deprived the Persians of the vessel which accompanied them. They were, therefore, under the necessity of returning to Asia, without exploring any more of Greece, being thus deprived of their conductor. On their departure, Democedes commissioned them to inform Darius, that he was married to a daughter of Milo, the name of
of Milo* the wrestler being well known to the Persian monarch. To me it seems that he hastened his marriage, and expended a vast sum of money on the occasion, to convince Darius that he enjoyed considerable reputation in his own country.

CXXXVIII. The Persians, leaving Crotona, were driven by contrary winds to Japygia 160, where they were made slaves. Gillus, an exile of Tarentum, ransomed them, and sent them home to Darius. For this service, the king declared himself willing to perform whatever Gillus should require; who accordingly explaining the circumstances of his misfortune, requested to be restored to his country. But Darius thinking that if, for the purpose of effecting the restoration of this man, a large fleet should be fitted out, all Greece would take alarm; Gillus affirmed that the Cnidians would of themselves be able to accomplish it: imagining that as this people were in alliance with the Tarentines, it might be effected without difficulty. Darius acceded to his wishes, and sent a messenger to Cnidos 161, requiring them to restore Gillus

* For an account of Milo, see the translation of Aulus Gellius, b. 15. c. 16. There was a statue of Milo erected at Olympia, the work of Damesas of Crotona. See also Philostratus, in his life of Apollonius, l. 4. c. 28.

160 *Japygia.*—This place is now called Cape de Leuca.—T.

161 *Cnidos.*—At this remote period, when navigation was certainly in its infancy, it seems not a little singular that there
Gillus to Tarentum. The Cnidians wished to satisfy Darius; but their solicitations had no effect on the Tarentines, and they were not in a situation to employ force.—Of these particulars, the above is a faithful relation, and these were the first Persians who, with the view of examining the state of Greece, passed over thither from Asia.

CXXXIX. Not long afterwards, Darius besieged and took Samos. This was the first city, either of Greeks or barbarians, which felt the force of his arms, and for these reasons: Cambyses, in his expedition against Ægypt, was accompanied by a great number of Greeks. Some, as it is probable, attended him from commercial views, others as soldiers, and many from no other motive than curiosity. Among these last was Syloson, an exile of Samos, son of Æaces, and brother of Polycrates. It happened one day very fortunately for this Syloson, that he was walking in the great square of Memphis with a red cloak folded about him. Darius, who was then in the king's guards,

there should be any communication or alliance between the people of Tarentum and of Cnidos. The distance is not inconsiderable, and the passage certainly intricate. Ctesias the historian was a native of Cnidos: here also was the beautiful statue of Venus, by Praxiteles; here also was Venus worshipped. O Venus, regina Cnidi Paphique, &c.

It is now a very miserable place, and called Cape Chio or Chio.—T.
guards, and of no particular consideration, saw him, and was so delighted with his cloak, that he went up to him with the view of purchasing it. Syloson, observing that Darius was very solicitous to have the cloak, happily, as it proved for him, expressed himself thus: "I would not part with this cloak for any pecuniary consideration whatever; but if it must be so, I will make you a present of it." Darius praised his generosity, and accepted the cloak.

CXL. Syloson for a while thought he had foolishly lost his cloak, but afterwards when Cambyses died, and the seven conspirators had destroyed the Magus, he learned that Darius, one of these seven, had obtained the kingdom, and was the very man to whom formerly, at his request, in Egypt, he had given his cloak. He went, therefore, to Susa, and presenting himself before the royal palace, said that he had once done a service to the king. Of this circumstance the porter informed the king; who was much astonished, and exclaimed, "To what Greek can I possibly be obliged for any services? I have not long been in possession of my authority, and since this time no Greek has been admitted to my presence, nor can I at all remember being indebted to one of that nation. Introduce him, however, that I may know what he has to say." Syloson was accordingly admitted to the royal presence; and being interrogated by interpreters who he was, and in what circumstance he had rendered
dered service to the king, he told the story of the cloak, and said that he was the person who had given it. In reply, Darius exclaimed, "Are you then " that generous man, who, at a time when I was " possessed of no authority, made me a present, " which, though small, was as valuable to me then, " as any thing of importance would be to me " now? I will give you in return, that you may " never repent of your kindness to Darius, the " son of Hystaspes, abundance of gold and " silver." "Sir," replied Syloson, "I would " have neither gold nor silver; give me Samos " my country, and deliver it from servitude. " Since the death of Polycrates my brother, whom " Orcetes slew, it has been in the hands of one of " our slaves. Give me this, Sir, without any ef- " fusion of blood, or reducing my countrymen to " servitude."

CXLI. On hearing this, Darius sent an army, commanded by Otanes, one of the seven, with orders to accomplish all that Syloson had desired. Otanes proceeded to the sea, and embarked with his troops.

CXLII. The supreme authority at Samos was then possessed by Mæandrius son of Mæandrius, to whom it had been confided by Polycrates himself. He was desirous of proving himself a very honest man, but the times would not permit him. As soon as he was informed of the death of Polycrates, the first thing he did was to erect an altar
to Jupiter Liberator, tracing round it the sacred ground, which may now be seen in the neighbourhood of the city. Having done this, he assembled the citizens of Samos, and thus addressed them:

"You are well acquainted that Polycrates confided to me his sceptre and his power, which if I think proper I may retain; but I shall certainly avoid doing that myself, which I deemed reprehensible in another. The ambition of Polycrates to rule over men who were his equals, always seemed to me unjust; nor can I approve of a like conduct in any man. Polycrates has yielded to his destiny; and for my part, I lay down the supreme authority, and restore you all to an equality of power. I only claim, which I think I reasonably may, six talents to be given me from the wealth of Polycrates, as well as the appointment in perpetuity, to me and my posterity of the priesthood of Jupiter Liberator, whose temple I have traced out; and then I restore you to liberty." When Maenandrius had thus spoken, a Samian exclaimed from the midst of the assembly, "You are not worthy to rule over us, your principles are bad, and your conduct reproachable. Rather let us make you give an account of the wealth which has passed through your hands." The name of this person was Telesarchus, a man much respected by his fellow-citizens.

CXLIII. Maenandrius revolved this circumstance in his mind; and being convinced that if he resigned
resigned his power, some other would assume it, he determined to continue as he was. Returning to the citadel, he sent for the citizens, as if to give them an account of the monies which had been alluded to, instead of which he seized and confined them. Whilst they remained in imprisonment, Mæandrius was taken ill; his brother Lyca-retus, not thinking he would recover, that he might the more easily succeed in his views upon Samos, put the citizens who were confined to death; indeed it did not appear that they were desirous of life under the government of a tyrant.

CXLIV. When, therefore, the Persians arrived at Samos, with the view of restoring Syloson, they met with no resistance*. The Mæandrian faction expressed themselves on certain conditions ready

---

152 The government of a tyrant.—See Wesseling's note and Pauw's conjecture upon this passage.—

The Greek says, they did not, as it seems, desire to be free, εὐθεῖα ἀπελευθέρωσιν εἰς τὸν θάνατον. Pauw reads ἀπελευθέρωσιν, and Wesseling explains it, they did not wish for liberty on such terms. Perhaps it may be doubted whether ἀπελευθέρωσιν here means political liberty, or merely a release from prison as opposed to δεσμώτης.

* Literally, no man lifted up his hands against them. Thus, in the Septuagint, 1 Kings, c. ii. v. 27, "Jeroboam lifted up his hands against the king, Rehoboam." See also Genesis, c. xli. v. 44. "And Pharaoh said to Joseph, I am Pharaoh, and without thee shall no man lift up his hand or foot in all the land of Egypt." See, too, 2 Sam. c. xx. v. 21. "A man of Mount Ephraim hath lifted up his hand against the king, even against David."
ready to submit: and Mæandrius himself consented to leave the island. Their propositions were accepted by Otanes; and whilst they were employed in ratifying them, the principal men of the Persians had seats brought, on which they placed themselves in front of the citadel.

CXLV. Mæandrius had a brother, whose name was Charileus, who was of an untoward disposition, and for some offence was kept chained in a dungeon. As soon as he heard what was doing, and beheld from his place of confinement the Persians sitting at their ease, he clamorously requested to speak with Mæandrius. Mæandrius, hearing this, ordered him to be unbound, and brought before him. As soon as Charileus came into his presence, he began to reproach and abuse him, earnestly importuning him to attack the Persians.

"Me," he exclaimed, "who am your brother, and who have done nothing worthy of chains, you have most basely kept bound in a dungeon; but on the Persians, who would afford you an easy victory, and who mean to drive you into exile, you dare not take revenge. If your fears prevent you, give me your auxiliary troops, who am equally disposed to punish them for coming here, and to expel you also from from our island."

CXLVI. To this discourse Mæandrius gave a favourable ear, not, I believe, that he was absurd
surd enough to imagine himself equal to a contest with the forces of the king, but from a spirit of envy against Syloson, and to prevent his receiving the government of Samos without trouble or exertion. He wished, by irritating the Persians, to debilitate the power of Samos, and then to deliver it into their hands; for he well knew that the Persians would resent whatever insults they might receive, upon the Samians, and as to himself he was certain that whenever he pleased he could depart unmolested, for he had provided a secret path, which led immediately from the citadel to the sea, by which he afterwards escaped. In the mean while Charileus, having armed the auxiliaries, opened the gates, and sallied forth to attack the Persians, who, so far from expecting anything of the kind, believed that a truce had been agreed upon, and was then in force. Upon these Persians, who were sitting at their ease, and who were persons of distinction, the Samians sallied, and put them to death; the rest of the troops, however, soon came to their assistance, by whom the party of Charileus was repulsed, and again obliged to seek shelter in the citadel.

CXLVII. Otanes, the commander in chief, had hitherto observed the orders of Darius, not to put any Samian to death, or to take any prisoners, but to deliver the island to Syloson, secure and without injury: but seeing so great a slaughter of his countrymen, his indignation prevailed, and he ordered
ordered his soldiers to put every Samian they could meet with to death, without any distinction of age. Part of his forces immediately blockaded the citadel, whilst another part were putting the inhabitants to the sword, not suffering the sacred places to afford any protection.

CXLVIII. Mæandrius, leaving Samos, sailed to Lacedæmon. On his arrival there with his wealth, he set in order his goblets of gold and silver, and directed his servants to clean them. Having entered into conversation with Cleomenes, son of Anaxandrides, the king of Sparta, he invited him to his house. Cleomenes saw his plate, and was struck with astonishment. Mæandrius desired him to accept of what he pleased, but

---

165 Cleomenes. — Of this Cleomenes, a memorable saying is preserved in the Apopthegmas of Plutarch. It relates to Homer and Hesiod; the former he called the poet of the Lacedæmonians, the latter the poet of the Helots, or the slaves; because Homer gave directions for military conduct. Hesiod about the cultivation of the earth. — T.

166 To accept of what he pleased. — This self-denial will appear less extraordinary to an English reader, when he is informed, that according to the institutions of Lycurgus, it was a capital offence for a Spartan to have any gold or silver in his possession. This we learn from Xenophon; and it is also ascertained by the following passage from Athenæus; see the sixth book of the Deipnosoph: " The divine Plato and Lycurgus of Sparta would not suffer in their republics either gold or silver, thinking that of all the metals iron and brass were sufficient." Plutarch, in the life of Lysander, tells us of a man named Therax, who, though the friend and colleague of Lysander, was put to death by the ephori, because some silver
but Cleomenes was a man of the strictest probity, and although Mæandrius persisted in importuning him to take something, he would by no means consent; but hearing that some of his fellow-citizens had received presents from Mæandrius, he went to the ephori, and gave it as his opinion, that it would be better for the interests of Sparta to expel this Samian from the Peloponnese, lest either he himself, or any other Spartan, should be corrupted by him. The advice of Cleomenes was generally approved, and Mæandrius received a public order to depart.

CXLIX. When the Persians had taken the Samians as in a net, they delivered the island to Syloson almost without an inhabitant. After a certain interval, however, Otanes, the Persian general, re-peopled it, on account of some vision which silver was found in his house. The self-denial, therefore, or rather forbearance of the ancient Romans, amongst whom no such interdiction existed, seems better entitled to our praise. This sumptuary law, with respect to gold and silver, took its rise from an oracle, which affirmed that the destruction of Sparta would be owing to its avarice:—it was this, 

Α' φιλαξενατια Σπαρτανει. T.

165 As in a not. The Greek is σαγηνοσαλε, which was the custom of the Persians, and was also done with respect to the islands of Chios, Lesbos, and Tenedos, see book vi. chap. 31, where their manner of doing it is described.—T.

166 Without an inhabitant. Strabo imputes this want of inhabitants to the cruelty of Syloson, and not to the severity of the Persians.—Larcher.
which he had, as well as from a disorder which seized his privities.

CL. Whilst the expedition against Samos was on foot, the Babylonians, being very well prepared, revolted. During the reign of the Magus, and whilst the seven were engaged in their conspiracy against him, they had taken advantage of the confusion of the times to provide against a siege, and their exertions had never been discovered. When they had once resolved on the recovery of their liberties, they took this measure:—Excepting their mothers, every man chose from his family the female whom he liked best, the remainder were all of them assembled together and strangled. Their reserve of one woman was to bake their bread; the rest were destroyed to prevent a famine.

CLI. On the first intelligence of this event, Darius

167 Assembled together and strangled.]—Prideaux, making mention of this strange and unnatural action, omits informing his readers that the Babylonians made an exception in favour of their mothers; but by this barbarous action the prophecy of Isaiah against this people was very signally fulfilled:—

"But these two things shall come to thee in a moment, in one day, the loss of children, and widowhood; they shall come upon thee in their perfection, for the multitude of thy sorceries, and for the great abundance of thine enchantments." Isaiah, xlvii. 9.—T.

168 Bake their bread.]—This anciently was the employment of the women; see book vii. chap. 187.—T.
Darius assembled his forces, and marched against them: on his arrival before the city, he besieged it in form. This, however, made so little impression upon them, that they assembled upon the ramparts, amused themselves with dancing, and treated Darius and his army with the extremest contempt. One among them exclaimed, "Persians, why do you lose your time? if you be wise, depart. When mules produce young, you shall take Babylon." This was the speech of a Babylonian, not believing such a thing possible.

CLII. A whole year and seven months having been consumed before the place, Darius and his army

---

169 Mules produce young.]—Upon this passage M. Larcher remarks, that mules but seldom engender. As I have never seen nor heard of any well authenticated account of such a circumstance, I give the reader the following passage from Pennant, with some confidence of its being invariably the case. "Neither mules, nor the spurious offspring of any other animal, generate any farther: all these productions may be looked upon as monsters; therefore, nature, to preserve the original species of animals entire and pure, wisely stops, in instances of deviation, the powers of propagation."

What Theophrastus or Pliny may have asserted, in contradiction to the above, will weigh but very little against the unqualified assertion of so able a naturalist as Mr. Pennant. The circumstance was ever considered as a prodigy, as appears from the following lines of Juvenal:

Egregium, sanctumque virum si cerno, bimembri
Hoc monstrum puero, vel miranti sub aratro
Piscibus inventis et foetae comparo mula.—T.
army began to be hopeless with respect to the event. They had applied all the offensive engines, and every stratagem, particularly those which Cyrus had before successfully used against the Babylonians; but every attempt proved ineffectual, from the unremitting vigilance of the besieged.

CLIII. In the twentieth month of the siege, the following remarkable prodigy happened to Zopyrus, son of Megabyzus, who was one of the seven that dethroned the Magus: one of the mules employed to carry his provisions produced a young one; which, when it was first told him, he disbelieved, and desired to see it; forbidding those who had witnessed the fact to disclose it, he revolved it seriously in his mind; and remembering the words of the Babylonian, who had said the city should be taken when a mule brought forth, he from this conceived that Babylon was not impregnable. The prophecy itself, and the mule's having a young one, seemed to indicate something supernatural.

CLIV. Having satisfied himself that Babylon might be taken, he went to Darius, and inquired if the capture of this city was of particular importance to him. Hearing that it really was, he began to think how he might have the honour of effecting it by himself: for in Persia there is no more certain road to greatness, than by the performance of illustrious actions. He conceived there was no more probable means of obtaining his end,
than first to mutilate himself, and thus pass over to the enemy. He made no scruple to wound himself beyond the power of being healed, for he cut off his nose and his ears, and clipping his hair close, so as to give it a mean appearance, he scourged himself; and in this condition presented himself before Darius.

CL.V. When the king beheld a man of his illustrious rank in so deplorable a condition, he instantly leaped in anger from his throne, and asked who had dared to treat him with such barbarity? Zopyrus made this reply, "No man, Sir, except yourself, could have this power over my person: I alone have thus disfigured my body, which I was prompted to do from vexation

170 To give it a mean appearance.]—I do not remember an instance of the hair being cut off as a punishment; it was frequently done as expressive of mourning in the most remote times; and it was one characteristic mark of the servile condition. See Juvenal, sat. v. book i. 170.

Omnia ferre
Si potes et debes pulsandum verte raso
Præbebis quandoque caput nec dura tenebis
Flagra pati, his epulis et tali dignus amico.

It was also, as I have elsewhere observed, done in ridicule.

171 Leaped in anger from his throne.]—This incident, with the various circumstances attending it, properly considered, would furnish an artist with an excellent subject for an historical painting. The city of Babylon at a distance, the Persian camp, the king's tent, himself and principal nobles in deep consultation, with the sudden appearance of Zopyrus in the mutilated condition here described, might surely be introduced and arranged with the most admirable effect.—T.
"vexation at beholding the Assyrians* thus "mock us."—" Wretched man," answered the king, "do you endeavour to disguise the shame-
"ful action you have perpetrated under an ho-
"nourable name? Do you suppose that because "you have thus deformed yourself, the enemy "will the sooner surrender? I fear what you have "done has been occasioned by some defect of "your reason." "Sir," answered Zopyrus "If "I had previously disclosed to you my inten-
tions, you would have prevented their accom-
plication; my present situation is the result of "my own determination only. If you do not "fail me, Babylon is our own. I propose to go, "in the condition in which you see me, as a de-
sertor to the Babylonians: it is my hope to "persuade them that I have suffered these cruel-
ties from you, and that they will, in conse-
quence, give me some place of military trust. "Do you, on the tenth day after my departure, "detach to the gate of Semiramis172 a thousand "men

* Assyrians and Babylonians are used as synonymous terms in Clio, c. 106, 178, as well as elsewhere.
172 The gate of Semiramis.]—Mr. Bryant's remark on this word is too curious to be omitted:—

Semiramis was an emblem, and the name was a compound, of Sama-Ramas, or Ramis: it signified the divine token, the type of providence; and as a military ensign, it may with some latitude be interpreted the standard of the Most High. It consisted of the figure of a dove, which was probably en-
circled with the Iris, as those two emblems were often repre-
sented together. All who went under that standard, or who payed
men of your army, whose loss will be of no consequence; at an interval of seven days more send to the Ninian gates other two thousand; again, after twenty days, let another party, to the number of four thousand, be ordered to the Chaldean gates, but let none of these detachments have any weapons but their swords; after this last-mentioned period, let your whole army advance, and surround the walls.

Be careful that Persians are stationed at the Belidian and Cissian gates. I think that the Babylonians, after witnessing my exploits in the field, will entrust me with the keys of those gates. Doubt not but the Persians, with my aid, will then accomplish the rest.

CLVI. After giving these injunctions, he proceeded towards the gates; and, to be consistent in the character which he assumed, he frequently paid any deference to that emblem, were styled Semarim and Samorim. One of the gates of Babylon was styled the gate of Semiramis, undoubtedly from having the sacred emblem of Sama-Ramas, or the dove, engraved by way of distinction over it. Probably the lofty obelisk of Semiramis, mentioned by Diodorus, was named from the same hieroglyphic.—This note was inserted in the first edition, but I now think it liable to many objections. Sama-Rama is an Indian deity, and has nothing to do with a dove. It is an emblem of power. It seems much more reasonable and natural to suppose that the gates of Babylon were named from the ancient monarchs, Bel, Ninus, &c.

173 The character which he assumed.]—Many circumstances in the history of Zopyrus resemble those of Sinon in the Aeneid:
quently stopped to look behind him. The sentinels on the watch-towers, observing this, ran down to the gate, which, opening a little, they inquired who he was, and what he wanted? When he told them his name was Zopyrus, and that he had deserted from the Persians, they conducted him before their magistrates. He then began a miserable tale of the injuries he had suffered from Darius, for no other reason but that he had advised him to withdraw his army, seeing no likelihood of his taking the city. "And now," says he, "men of Babylon, I come a friend to you, but a fatal enemy to Darius and his army. I am well acquainted with all his designs, and his treatment of me shall not be unre vengeance."

--- Qui se ignotum venientibus ultro
Hoc ipsum ut strueret, Trojanque aperiret Achivis,
Obtulerat, fidens animi, atque in utrumque paratus
Seu versare dolos, seu certae occumbere morti.---

Both tell a miserable tale of injuries received from their countrymen, and both affect an extraordinary zeal to distinguish themselves in the service of their natural enemies.

Simon says of himself;

Cui neque apud Danaos usquam locus, et super ipsi
Dardanidæ infensi pænas cum sanguine poscunt.---

Again he says,

Fas mihi Graiorum sacrata resolvere jura
Fas odisse viros, atque omnia ferre sub auras
Si qua tegunt; teneor patriæ nec legibus ullis.  

---
CLVII. When the Babylonians beheld a Persian of such high rank deprived of his ears and nose, and covered with wounds and blood, they entertained no doubts of his sincerity, or of the friendliness of his intentions towards them. They were prepared to accede to all that he desired; and on his requesting a military command, they gave it him without hesitation. He then proceeded to the execution of what he had concerted with Darius. On the tenth day, at the head of some Babylonian troops, he made a sally from the town, and encountering the Persians, who had been stationed for this purpose by Darius, he put every one of them to death. The Babylonians, observing that his actions corresponded with his professions, were full of exultation, and were ready to yield him the most implicit obedience. A second time, at the head of a chosen detachment of the besieged, he advanced from the town at the time appointed, and slew the two thousand soldiers of Darius. The joy of the citizens at this second exploit was so extreme, that the name of Zopyrus resounded with praise from every tongue. The third time also, after the number of days agreed upon had passed, he led forth his troops, attacked and slaughtered the four thousand. Zopyrus, after this, was every thing with the Babylonians, so that they made him the commander of their army, and guardian of their walls.
CLVIII. At the time appointed, Darius advanced with all his forces to the walls. The perfidy of Zopyrus then became apparent; for as soon as the Babylonians mounted the wall to repel the Persian assault, he immediately opened to his countrymen what are called the Belidian and Cissian gates. Those Babylonians who saw this transaction fled for refuge to the temple of Jupiter Belus; they who saw it not, continued in their posts, till the circumstance of their being betrayed became notorious to all.

CLIX. Thus was Babylon a second time taken. As soon as Darius became master of the place\(^\text{174}\), he levelled the walls *, and took away the gates, neither

\(^{174}\text{Master of the place.}\)—Plutarch informs us, in his Apophthegms, that Xerxes being incensed against the Babylonians for revolting, after having conquered them a second time, forbade their carrying arms, and commanded them to employ their time in singing, music, and all kinds of dissipation, &c.

The Babylonians did not revolt under Xerxes. Plutarch assigns to him a fact, which regards Darius; however this may be, after the reduction of Babylon the Persian monarchs fixed their residence in three great cities; the winter they passed at Babylon, the summer at Media, doubtless at Ecbatane, and the greater part of the spring at Susa.—Larcher.

* I think with Major Rennel that this expression must be understood with some reserve. The following are M. Rennel's words on this subject:

It must not be omitted that Herodotus states that Darius Hystaspes, on the taking of Babylon by the stratagem of Zopyrus,
neither of which things Cyrus had done before. He ordered three thousand of the most distinguished nobility to be crucified: the rest were suffered to continue where they were. He took care also to provide them with women, for the Babylonians, as we have before remarked, to prevent a famine, had strangled their wives. Darius ordered the neighbouring nations to send females to Babylon, each being obliged to furnish a stipulated number. These in all amounted to fifty thousand, from whom the Babylonians of the present day are descended.

CLX. With respect to the merit of Zopyrus, in the opinion of Darius, it was exceeded by no Persian of any period, unless by Cyrus; to him, indeed,
indeed, he thought no one of his countrymen could possibly be compared. It is affirmed of Darius, that he used frequently to assert, that he would rather Zopyrus had suffered no injury, than have been master of twenty Babylons. He rewarded him magnificently: every year he presented him with the gifts deemed most honourable in Persia; he made him also governor of Babylon for life, free from the payment of any tribute, and to these he added other marks of liberality. Megabyzus, who commanded in Ægypt against the Athenians and their allies, was a son of this Zopyrus; which Megabyzus had a son named Zopyrus, who deserted from the Persians to the Athenians.

175 A son named Zopyrus.—Zopyrus, son of Megabyzus, and grandson of the famous Zopyrus, revolted from Artaxerxes after the death of his father and mother, and advanced towards Athens, on account of the friendship which subsisted betwixt his mother and the Athenians. He went by sea to Caunus, and commanded the inhabitants to give up the place to the Athenians who were with him. The Cau- nians replied, that they were willing to surrender it to him, but they refused to admit any Athenians. Upon this he mounted the wall; but a Cauanian, named Alcides, knocked him on the head with a stone. His grandmother Amestris afterwards crucified this Cauanian.—Larcher.
Darius, after the capture of Babylon, undertook an expedition against Scythia. Asia was now both populous and rich, and he was desirous of avenging on the Scythians, the injuries they had formerly committed, by entering Media, and defeating those who opposed them. During a period of twenty-eight years, the Scythians, as I have before remarked, retained the sovereignty of the Upper Asia; entering into which, when in pursuit of the Cimmerians, they expelled

---

1 Cimmerians.]—From this people came the proverb of Cimmerian darkness.

We reach'd old ocean's utmost bounds,  
Where rocks control his waves with ever-during mounds;  
There in a lonely land, and gloomy cells,  
The dusky nation of Cimmeria dwells.
expelled the Medes, its ancient possessors. After this long absence from their country, the Scythians were desirous to return, but here as great a labour awaited them, as they had experienced in their expedition into Media; for the women, deprived so long of their husbands, had connected themselves with their slaves, and they found a numerous body in arms ready to dispute their progress.

The sun ne'er views th' uncomfortable seats,
When radiant he advances or retreats.
Unhappy race! whom endless night invades,
Clouds the dull air, and wraps them round in shades.

Odyss. book xi.

Of this proverb, Ammianus Marcellinus makes a happy use, when censuring the luxury and effeminacy of the Roman nobility. "If," says he, (I use the version of Mr. Gibbon,) "a fly should presume to settle in the silken folds of their gilded umbrellas, should a sun-beam penetrate through some unguarded and imperceptible chink, they deplore their intolerable hardships, and lament in affected language that they were not born in the land of the Cimmerians, the regions of eternal darkness."

Ovid also chooses the vicinity of Cimmeria as the properest place for the palace of the god of sleep:

Est prope Cimmerios, longo spelunca recessu,
Mons cavus, ignavi domus et penetralia Somini,
Quo nunquam radiis oriens, mediusve, cadensve
Phæbus adire potest, nebulae caligine mixtæ
Exhalantur humo, dubieque crepuscula lucis.

The region assigned to this people in ancient geography was part of European Scythia, now called Little Tartary.—T.
II. It is a custom with the Scythians to deprive all their slaves of sight on account of the milk, which is their customary drink. They have a particular kind of bone, shaped like a flute: this is applied

*Deprive all their slaves of sight.*—Barbarous as this conduct may appear to every humane reader, although practised amongst an uncivilized race of men, he will be far more shocked when I remind him that in the most refined period of the Roman empire those who were deemed the wisest and most virtuous of mankind did not scruple to use their slaves with yet more atrocious cruelty. It was customary at Rome to expose slaves who were sick, old, and useless, to perish miserably in an island of the Tyber. Plutarch tells us, in his Life of Cato, that it was his custom to sell his old slaves for any price, to get rid of the burden. They were employed, and frequently in chains, in the most laborious offices, and for trivial offences, and not seldom on mere suspicion, were made to expire under the most horrid tortures that can be imagined. —T.

*On account of the milk.*—Of this people, Homer speaks in the following lines:

And where the far-fam'd Hippomolgian strays,
Renown'd for justice and for length of days,
Thrice happy race, that, innocent of blood,
From milk innoxious seek their simple food.—II. xiii.

Upon this subject Larcher gives the following passage from Niebuhr:

"J'entendis et vis moi-même, à Basra, que lorsqu'un Arabe trait la femelle du bœuf, un arère lui fourre la main et le bras jusqu'au coude, dans la vulva, parce qu'on prétend savoir par expérience qu'étant chatouillé à la sorte, elle donne plus de lait. Cette méthode est très beaucoup à celle des Scythes."—We learn, from the lines of Antiphanes, preserved in Athenæus, that the Scythians gave this milk to their children as soon as they were born.
applied to the private parts of a mare, and blown into from the mouth. It is one man's office to blow, another's to milk the mare. Their idea is, that, the veins of the animal being thus inflated, the dugs are proportionally filled. When the milk is thus obtained, they place it in deep wooden vessels, and the slaves are directed to keep it in continual agitation. Of this, that which remains at top* is most esteemed, what subsides is of inferior value. This it is which induces the Scythians to deprive all their captives of sight, for they

"Do not those Scythians appear to you remarkably wise who give to their children, as soon as ever they are born, the milk of mares and cows?"—T.

* Remains at top.]—Is it not surprising, asks M. Larcher in this place, that neither the Greeks nor the Latins had any term in their language to express cream?

Butter also was unknown to the Greeks and Romans till a late period. Pliny speaks of it as a common article of food among barbarous nations, and used by them as an unction. The very name of butter (βετυγος) which signifies cheese, or coagulum of cows' milk, implies an imperfect notion of the thing. It is clear that Herodotus here describes the making of butter, though he knew no name for the product. Pliny remarks, that the barbarous nations were as peculiar in neglecting cheese* making butter. Spuma lactis, which that author uses in what butter is, seems a very proper phrase for cream. Butter is often mentioned in Scripture; see Harmer's curious accounts of the modes of making it in the East, vol. i. and iii.—T.
they do not cultivate the ground, but lead a pastoral life.

III. From the union of these slaves with the Scythian women, a numerous progeny was born, who, when informed of their origin, readily advanced to oppose those, who were returning from Media. Their first exertion was to intersect the country by a large and deep trench*, which extended from the mountains of Tauris, to the Palus Maeotis

---

5 Lead a pastoral life.]—The influence of food or climate, which in a more improved state of society is suspended or subdued by so many moral causes, most powerfully contributes to form and to maintain the national character of barbarians. In every age, the immense plains of Scythia or Tartary have been inhabited by vagrant tribes of hunters and shepherds, whose indolence refuses to cultivate the earth, and whose restless spirit disdains the confinement of a sedentary life.—Gibbon.

* It is by no means easy to conceive what mountains can here be intended. Larcher translates the passage as I do, and thus expresses himself in a note:

The Chersonesus Taurica is surrounded on all sides by the Euxine, the Cimmerian Bosphorus, and the Palus Maeotica, except in one narrow neck which separates the gulph of Carcinitis from the Palus Maeotis. It is in this spot, I suppose, that the trench mentioned by Herodotus was sunk. It commences at the spot called Taphrae, where the city Perekop now stands, which according to P. Briel in the Tartar language signifies a trench. The Emperor Constantine Porphyrogenitus tells us that in his time this trench was filled up. The mountains of which Herodotus speaks were within Tauris; there are none beyond it.
Palus Maeotis. They then encamped opposite to the Scythians, who were endeavouring to effect their passage. Various engagements ensued, in which the Scythians obtained no advantage. "My "countrymen," at length one of them exclaimed, "what are we doing? In this contest with our "slaves, every action diminishes our number, "and by killing those who oppose us, the value "of victory decreases: let us throw aside our "darts and our arrows, and rush upon them only "with the whips which we use for our horses. "Whilst they see us with arms, they think them-"selves our equals in birth and importance; "but as soon as they shall perceive the whip in "our hands, they will be impressed with the sense "of their servile condition, and resist no longer."

IV. The Scythians approved the advice; their opponents forgot their former exertions, and fled: in this manner the Scythians obtained the sovereignty of Asia; and thus, after having been expelled by the Medes, they returned to their country. From the above motives Darius, eager for revenge, prepared to lead an army against them.

V. The Scythians affirm of their country that it

Perhaps, says my friend Major Rennel, the passage is corrupt, and it may be from some part of Tauris to the Palus Maeotis.—May it not then be the trench which separates the Peninsula of the Crimea from the main land?
it was of all others the last formed, which happened in this manner: When this region was in its original and desert state, the first inhabitant was named Targitaus, a son, as they say (but which to me seems incredible) of Jupiter, by a daughter of the Borysthenes. This Targitaus had three sons, Lipoxais, Arpoxais, and lastly Colaxais. Whilst they possessed the country, there fell from heaven into the Scythian district a plough, a yoke, an axe, and a goblet, all of gold. The eldest of the brothers was the first who saw them; who, running to take them, was burnt by the gold. On his retiring, the second brother approached, and was burnt also. When these two had been repelled by the burning gold, last of all the youngest brother advanced; upon him the gold had no effect, and he carried it to his house. The two elder brothers, observing what had happened, resigned all authority to the youngest.

VI. From Lipoxais those Scythians were descended

6 Last formed.]—Justin informs us, that the Scythians pretended to be more ancient than the Egyptians.—T.

* The fabulous accounts of the origin of the Scythians merit little attention as matters of history; but there are certain accordances in respect of names with the modern traditions amongst the inhabitants of Western Tartary that appear remarkable. See Rennel farther on this subject, p. 73. M. Rennel thinks he perceives in the Targitaus of Herodotus some affinity to the name Turk, the reputed son of Japhet, and the patriarch of the Tribes of Turkestan and Tartary.
scended who are termed the Auchatae; from Arpoxais, the second brother, those who are called the Catiarri and the Traspies; from the youngest, who was king, came the Paralatae. Generally speaking, these people are named Scolotiri, from a surname of their king, but the Greeks call them Scythians.

VII. This is the account which the Scythians give of their origin; and they add, that from their first king Targitaus, to the invasion of their country by Darius, is a period of a thousand years, and no more. The sacred gold is preserved by their kings with the greatest care; and every year there are solemn sacrifices, at which the prince assists. They have a tradition, that if the person who has the custody of this gold, sleeps in the open air during the time of their annual festival, he dies before the end of the year; for this reason they give him as much land as he can pass over on horseback in the course of a day.

As

7 Paralatae.]—This passage will be involved in much perplexity, unless for της βασιλείας, we read τοῦ βασιλέως.—T.

6 They give him as much land.]—This is, beyond doubt, a very perplexed and difficult passage; and all that the different annotators have done, has been to intimate their conjectures. I have followed that which to my judgment seemed the happiest.—T.

9 On horseback in the course of a day.]—Larcher adduces, from Pliny, Ovid, and Seneca, the three following passages, to prove that anciently this was the mode of rewarding merit.
As this region is extensive, king Colaxais divided the country into three parts, which he gave to three sons, making that portion the largest in which the gold was deposited. As to the district which lies farther to the north, and beyond the extreme inhabitants of the country, they say that it neither can be passed, nor yet discerned with the eye, on account of the feathers which are continually falling: with these both the earth and the air are so filled, as effectually to obstruct the view.

VIII. Such is the manner in which the Scythians describe themselves and the country beyond them. The Greeks who inhabit Pontus speak of both as follows: Hercules, when he was

---

Dona amplissima imperatorum et fortium civium quantum quis uno die plurimum circumaravisset.—Pliny.

This from Ovid is more pertinent:

At proceres
Ruris honorati tantum tibi Cipe dedere
Quantum depresso subjectis bobus aratro
Complecti posses ad finem solis ab ortu.—

See also Seneca:—

Illi ob virtutem et bene gestam remppublicam tantum agri
decernetur, quantum arando uno die circuire potuisset.

10 On account of the feathers.]—It must immediately occur to the reader that these feathers can be nothing but snow; and so Herodotus himself explains it. See c. 31.
was driving away the heifers of Geryon", came to this region, now inhabited by the Scythians, but which then was a desert. This Geryon lived beyond Pontus, in an island which the Greeks call Erythia, near Gades, which is situate in the ocean, and beyond the Columns of Hercules. The ocean, they say, commencing at the east, flows round all the earth; this, however, they affirm.

11 Geryon.—To this personage the poets assigned three heads and three bodies. Hesiod calls him τρικεφαλος, and Euripides τρισωματος. See also Horace:

 Qui ter amplum
Geryonem, Tityonique tristi
Compescit unda.—

Virgil calls him Tergeminus: but the minutest description is found in Silius Italicus; the most satisfactory in Palaephatus de incredibilibus:

Qualis Atlantiaco memoratur litore quondam
Monstrum Geryones immæne tricorporis iræ,
Cui tres in pugna dextra varia arma gerebant
Una ignes sævos, ast altera pone sagittas
Fundebat, validam torquebat tertia cornum,
Atque uno diversa dabat tria vulnera nisu.—

Palaephatus, says he, lived at Tricarena; and that, being called the Tricarenian Geryon, he was afterwards said to have had three heads.—T.

12 Flows round the earth.—Upon this passage the following remark occurs in Stillingfleet's Origin. Sacr. book i. c. 4.—

"It cannot be denied but a great deal of useful history may be fetched out of Herodotus; yet who can excuse his ignorance, when he not only denies there is an ocean compassing the land, but condemns the geographers for asserting it?" This assertion of Stillingfleet is not true, for Herodotus neither denies the fact, nor condemns the geographers.
affirm without proving it. Hercules coming from thence, arrived at this country, now called Scythia, where, finding himself overtaken by a severe storm, and being exceedingly cold, he wrapped himself up in his lion's skin, and went to sleep. They add, that his mares, which he had detached from his chariot to feed, by some divine interposition disappeared during his sleep.

IX. As soon as he awoke, he wandered over all the country in search of his mares, till at length he came to the district which is called Hylæa: there in a cave he discovered a female of most unnatural appearance, resembling a woman as far as the thighs, but whose lower parts were like a serpent. Hercules beheld her with astonishment, but he was not deterred from asking her whether she had seen his mares? She made answer, that they were in her custody; she refused, however, to restore them, but upon condition of his cohabiting with her. The terms proposed, induced Hercules to consent; but she still

13 Like a serpent.]—M. Pelloutier calls this monster a syren, but Homer represents the Syrens as very lovely women.

Diodorus Siculus speaks also of this monster, describing it in terms like Herodotus. He makes her the mistress of Jupiter, by whom she had Scythes, who gave his name to the nation.—Larcher.
still deferred restoring his mares, from the wish of retaining him longer with her, whilst Hercules was equally anxious to obtain them and depart. After a while she restored them with these words: "Your mares, which wandered here, I have preserved; you have paid what was due to my care, I have conceived by you three sons; I wish you to say how I shall dispose of them hereafter; whether I shall detain them here, where I am the sole sovereign, or whether I shall send them to you." The reply of Hercules was to this effect: "As soon as they shall be grown up to man's estate, observe this, and you cannot err; whichever of them you shall see bend this bow, and wear this belt as I do, him detain in this country: the others, who shall not be able to do this, you may send away. By minding what I say, you will have pleasure yourself, and will satisfy my wishes."

---

14 *This belt.*]—It was assigned to Hercules as one of his labours by Eurystheus, to whom he was subject, to deprive Hippolyta, queen of the Amazons, of her belt. Ausonius, in the inscription which he probably wrote for some ancient relievo, mentions it as the sixth labour;

Threíciam sexto spoliavit Amazona balthep.

This labour is also mentioned thus by Martial:

Peltatam Scythico discinxit Amazona nodo.

Whether Herodotus means to speak of this belt I pretend not to determine.—*T.*
X. Having said this, Hercules took one of his bows, for thus far he had carried two, and shewing her also his belt, at the end of which a golden cup was suspended, he gave her them, and departed. As soon as the boys of whom she was delivered grew up, she called the eldest Agathyrsus, the second Gelonus, and the youngest Scytha. She remembered also the injunctions she had received; and two of her sons, Agathyrsus and Gelonus, who were incompetent to the trial which was proposed, were sent away by their mother from this country. Scytha the youngest was successful in his exertions, and remained. From this Scytha, the son of Hercules, the Scythian monarchs are descended; and from the golden cup the Scythians to this day have a cup at the end of their belts.

XI. This is the story which the Greek inhabitants of Pontus relate; but there is also another, to which I am more inclined to assent:—The Scythian Nomades of Asia, having been harassed by the Massagetæ in war, passed the Araxis; and settled in Cimmeria; for it is to be observed, that the country now possessed by the Scythians belonged formerly to the Cimmerians. This people, when attacked by the Scythians, deliberated what it was most advisable to do against the inroad of so vast a multitude. Their sentiments were divided; both were violent, but that
that of the kings appears preferable. The people were of opinion, that it would be better not to hazard an engagement, but to retreat in security; the kings were at all events for resisting the enemy. Neither party would recede from their opinions, the people and the princes mutually refusing to yield; the people wished to retire before the invaders, the princes determined rather to die where they were, reflecting upon what they had enjoyed before, and alarmed by the fears of future calamities. From verbal disputes they soon came to actual engagement, and they happened to be nearly equal in number. All those who perished by the hands of their countrymen were buried by the Cimmerians near the river Tyré, where their monuments may still be seen. The survivors fled from their country, which in its abandoned state was seized and occupied by the Scythians.

XII. There are still to be found in Scythia walls* and bridges which are termed Cimmerian;

* Respecting the walls still found in the time of Herodotus, under the name of Cimmerian, he does not say they were in the Peninsula, but the context implies it, and it is not improbable that he had seen them. Baron Tott saw, in the mountainous part of the Crimea, ancient castles and other buildings, a part of which were excavated from the live rock, together with subterraneous passages from one to the
merian; the same name is also given to a whole district, as well as to a narrow sea. It is certain that when the Cimmerians were expelled their country by the Scythians, they fled to the Asiatic Chersonese, where the Greek city of Sinopé is at present situated. It is also apparent, that, whilst engaged in the pursuit, the Scythians deviated from their proper course, and entered Media. The Cimmerians in their flight kept uniformly the other. These were, he says, always on mountains difficult of access. He refers them to the Genoese; with what justice we know not: it is possible they might have made use of them: but it is more than probable that these are the works alluded to by our author, for it may be remarked that works of this kind are commonly of very ancient date. See Rennel.

Sinope.}—There were various opinions amongst the ancients concerning this city. Some said it was built by an Amazon so called; others affirm it was founded by the Milesians; Strabo calls it the most illustrious city of Pontus. It is thus mentioned by Valerius Flaccus, an author not so much read as he deserves:

Assyrios complexa sinus stat opima Sinope
Nympha prius, blandosque Jovis quæ luserat ignes
Caëlicolis immota precis.

There was also a celebrated courtesan of this name, from whom Sinopissare became a proverb for being very lascivious.

The modern name of the place is Sinub.—

* Such migrations as these, observes Major Rennel, have frequently happened; and we may quote, in particular, the famous migration of the Kalmuks in 1770, 1771, when they moved, or rather took flight from the West of the river Wolga.
uniformly by the sea-coast; but the Scythians, having Mount Caucasus to their right, continued the pursuit, till by following an inland direction they entered Media.

XIII. There is still another account, which has obtained credit both with the Greeks and barbarians. Aristeas the poet, a native of Proconnesus, and son of Caustrobius, relates, that under the influence of Apollo he came to the Issedones, that beyond this people he found the Arimaspi, a nation who have but one eye; farther

Wolga to the Balchaler Lake, called also Palkata Nor, and Lake of the Kalmucks.

The numbers were said to be from 55 to 60 thousand families, perhaps 350,000 persons.

16 Aristeas]—This person is mentioned also by Pliny and Aulus Gellius; it is probable that he lived in the time of Cyrus and Cræsus. Longinus has preserved six of his verses; see chap. 10; of which he remarks, that they are rather florid than sublime. Tzetzes has preserved six more. The account given of him by Herodotus is far from satisfactory.

17 Arimaspi]—The Arimaspian were Hyperborean Cyclopeans, and had temples named Charis or Charisia, in the top of which was preserved a perpetual fire. They were of the same family as those of Sicily, and had the same rites, and particularly worshipped the Ophite deity under the name of Opis. Aristeas Proconnesus wrote their history, and among other things mentioned that they had but one eye, which was placed in their graceful forehead. How could the front of a Cyclopean, one of the most hideous monsters that ever poetic fancy framed, be styled graceful? The whole is a mistake of terms, and what this writer had misapplied
farther on were the Gryphins, the guardians of the gold; and beyond these the Hyperboreans, who possess the whole country quite to the sea, and that all these nations, except the Hyperboreans, are continually engaged in war with their neighbours. Of these hostilities the Arimaspians were the first authors, for they drove out the Issedones, who did the same to the Scythians:

misapplied related to Charis a tower, and the eye was a casement in the top of the edifice, where a light and fire were kept up.—Bryant.

With all due respect for Mr. Bryant, it does not seem that the Arimaspians could have much to do with fire-towers. They did not dwell on the sea-coast between which and them, according to Herodotus, were two nations.

Thus the Gryphins,
Those dumb and ravenous dogs of Jove, avoid
The Arimaspian troops, whose frowning foreheads
Glare with one blazing eye: along the banks
Where Pluto rolls his streams of gold, they rein
Their foaming steeds.

Prometheus Vinctus; Aeschyl. Potter's Translation.

Pausanias tells us, that the Gryphins are represented by Aristeas as monsters resembling lions, with the beaks and wings of eagles. By the way, Dionysius of Halicarnassus is of opinion that no such poem as this of Aristeas ever existed.—T.

The ancients do not appear to have had any precise ideas of the country of this people. The Hyperborean mountains are also frequently mentioned, which, as appears from Virgil, were the same as the Riphæan:

Talis Hyperboreo septem subjecta trioni
Gens effræna virum Riphæo tunditur Euro
Et pecudum fulvis velatur corpora satis.  

T.
Scythians: the Scythians compelled the Cimmerians, who possessed the country towards the south, to abandon their native land. Thus it appears, that the narrative of Aristeas differs also from that of the Scythians.

XIV. Of what country the relater of the above account was, we have already seen; but I ought not to omit what I have heard of this personage, both at Proconnesus and Cyzicus. It is said of this Aristeas, that he was of one of the best families of his country, and that he died in the workshop of a fuller, into which he had accidentally gone. The fuller immediately secured his shop, and went to inform the relations of the deceased of what had happened. The report having circulated through the city, that Aristeas was dead, there came a man of Cyzicus, of the city of Artaces, who affirmed that this assertion was false, for that he had met Aristeas going to Cyzicus.

29 Cyzicus.—This was one of the most flourishing cities of Mysia, situate in a small island of the Propontis, and built by the Milesians. It is thus mentioned by Ovid:

Inde Propontiacis hærentem Cyzicon oris;
Cyzicon Æmoniæ nobile gentis opus.

The people of this place were remarkable for their effeminacy and cowardice; whence tinctura Cyzicena became proverbial for any dastardly character. It has now become a peninsula, by the filling up of the small channel by which it was divided from the continent.—T.
Cyzicus, and had spoken with him. In consequence of his positive assertions, the friends of Aristeas hastened to the fuller's shop with everything which was necessary for his funeral, but when they came there, no Aristeas was to be found, alive or dead. Seven years afterwards it is said that he re-appeared at Proconnesus, and composed those verses which the Greeks call Arimaspian; after which he vanished a second time.

XV. This is the manner in which these cities speak of Aristeas: but I am about to relate a circumstance which to my own knowledge happened to the Metapontines of Italy, three hundred and forty years after Aristeas had a second time disappeared, according to my conjecture, as it agrees with what I heard at Proconnesus and Metapontus. The inhabitants of this latter place affirm, that Aristeas, having appeared in their city, directed them to construct an altar to Apollo, and near it a statue to Aristeas of Proconnesus.

24 Going to Cyzicus.—Upon this story Larcher remarks, that there are innumerable others like it, both among the ancients and moderns. A very ridiculous one is related by Thucyd., in his Life of Romulus:—A man named Cleomedes, seeing himself pursued, jumped into a great chest, which closed upon him: after many ineffectual attempts to open it, they broke it in pieces, but no Cleomedes was to be found, alive or dead.—T.
connesus. He told them that they were the only people of Italy whom Apollo had ever honoured by his presence, and that he himself had attended the god under the form of a crow: having said this, he disappeared. The Metapontines relate, that in consequence of this they sent to Delphi, to inquire what that unnatural appearance might mean; the Pythian told them in reply, to perform what had been directed, for that they would find their obedience rewarded; they obeyed accordingly, and there, now stands near the statue of Apollo himself, another bearing the name of Aristeas: it is placed in the public square of the city, surrounded with laurels.

XVI. Thus much of Aristeas.—No certain knowledge is to be obtained of the places which lie remotely beyond the country of which I before spake: on this subject I could not meet with any

22 Under the form of a crow.]—Pliny relates this somewhat differently. He says, it was the soul of Aristeas, which having left his body appeared in the form of a crow. His words are these: Aristeæ etiam visam evolantem ex ore in Proconneso, corvi effigie magna quæ sequitur fabulositate.—Larcher.

The crow was sacred to Apollo, as appears from Ælian de Animalibus, book vii. 18. We learn also from Scaliger, in his Notes on Manilius, that a crow sitting on a tripod was found on some ancient coins, to which Statius also alludes in the following line:

Non comes obscurus tripodum. T.
any person able to speak from his own knowledge. Aristeas above-mentioned confesses, in
the poem which he wrote, that he did not penetrate beyond the Issedones; and that what he
related of the countries more remote, he learned of the Issedones themselves. For my own part,
all the intelligence which the most assiduous researches, and the greatest attention to authen-
ticity, have been able to procure, shall be faithfully related.

XVII. As we advance from the port of the Borysthenites, which is unquestionably the centre
of all the maritime parts of Scythia, the first people who are met with are the Callipidae, who are Greek Scythians: beyond these is another nation, called the Halizones. These two
people in general observe the customs of the Scythians, except that for food they sow corn,
Onions, garlic, lentils, and millet. Beyond the Halizones dwell some Scythian husbandmen, who
sow corn not to eat, but for sale. Still more remote are the Neuri, whose country towards the

23 Callipidae.—Solinus calls these people Callipodes.—T.
24 Halizones.—So called because surrounded on all sides by the sea, as the word itself obviously testifies.—T.
25 Neuri.—Mela, book ii. 1, says of this people, that they had the power of transforming themselves into wolves, and resuming their former shape at pleasure.—Neuris statum singulis tempus est, quo si velint in lupos, iterumque in eos qui fuere mutentur.—T.
the north, as far as I have been able to learn, is totally uninhabited. All these nations dwell near the river Hypanis, to the west of the Borysthenes.

XVIII. Having crossed the Borysthenes, the first country towards the sea is Hylæa, contiguous to which are some Scythian husbandmen, who call themselves Olbiopolitæ, but who, by the Greeks living near the Hypanis, are called Borysthenites. The country possessed by these Scythians towards the east is the space of a three days journey, as far as the river Panticapes; to the north, their lands extend to the amount of an eleven days voyage along the Borysthenes. The space beyond this is a vast inhospitable desert; and remoter still are the Androphagi, or men-eaters, a separate nation, and by no means Scythian. As we pass farther from these, the country is altogether desert, not containing, to our knowledge, any inhabitants.

XIX. To the east of these Scythians, who are husbandmen, and beyond the river Panticapes, are the Scythian Nomades or shepherds, who are totally unacquainted with agriculture: except Hylæa, all this country is naked of trees. These Nomades inhabit a district to the extent of a fourteen

---

26 Borysthenites.—These people are called by Propertius the Borysthenidae:

Gloria ad hybernos lata Boristhenidas. T.
fourteen days journey towards the east, as far as the river Gerrhus.

XX. Beyond the Gerrhus is situate what is termed the royal province of Scythia, possessed by the more numerous part and the noblest of the Scythians, who consider all the rest of their countrymen as their slaves. From the south they extend to Tauris, and from the east as far as the trench which was sunk by the descendants of the blinded slaves, and again as far as the port of the Palus Mœotis, called Chemni, and indeed many of them are spread as far as the Tanais. Beyond these, to the north, live the Melanchlæni, another nation who are not Scythians. Beyond the Melanchlæni the lands are low and marshy, and as we believe entirely uninhabited.

XXI. Beyond the Tanais the region of Scythia terminates, and the first nation we meet with are the Sauromatae, who, commencing at the remote parts of the Palus Mœotis, inhabit a space to the north, equal to a fifteen days journey; the country is totally destitute of trees, both wild and cultivated. Beyond these are the Budini, who are husbandmen, and in whose country trees are found in great abundance.

XXII. To the north, beyond the Budini, is an immense desert of eight days journey; passing
passing which to the east are the Thyssagetae, a singular but populous nation, who support themselves by hunting. Contiguous to these, in the same region, are a people called Iyrcae; they also live by the chase, which they thus pursue:—

Having ascended the tops of the trees, which every where abound, they watch for their prey. Each man has a horse, instructed to lie close to the ground, that it may not be seen; they have each also a dog. As soon as the man from the tree discovers his game, he wounds it with an arrow, then mounting his horse he pursues it, followed by his dog. Advancing from this people still nearer to the east, we again meet with Scythians, who having seceded from the Royal Scythians, established themselves here.

XXIII. As far as these Scythians, the whole country is flat, and the soil excellent; beyond them it becomes barren and stony. After travelling over a considerable space, a people are found living at the foot of some lofty mountains, who, both male and female, are said to be bald from their birth, having large chins, and nostrils like the ape species. They have a language of their

27 Iyrcæ.]—It is in vain that Messieurs Falconnet and Mallet are desirous of reading here Tavcope, the Turks, the same as it occurs in Pomponius Mela; it would be better, with Pintianus, to correct the text of the geographer by that of Herodotus. Pliny also joins this people with the Thyssagetae.—Larcher.
their own, but their dress is Scythian; they live chiefly upon the produce of a tree which is called the ponticus; it is as large as a fig, and has a kernel not unlike a bean: when it is ripe they press it through a cloth; it produces a thick black liquor which they call aschy; this they drink, mixing it with milk; the grosser parts which remain they form into balls* and eat. They have but few cattle, from the want of proper pasturage. Each man dwells under his tree; this during the winter they cover with a thick white cloth, which in the summer is removed; they live unmolested by any one, being considered as sacred, and having among them no offensive weapon. Their neighbours apply to them for decision in matters of private controversy; and whoever seeks an asylum amongst them is secure from injury. They are called the Argippæi.

* Balls.]—This probably refers to the balls of cheese which the Tartars prepare and soften in milk and water, before they eat them.

28 Argippæi.]—These people are said to have derived their name from the white horses with which their country abounded. The Tartars of the present day are said to hold white horses in great estimation; how much they were esteemed in ancient times, appears from various passages of different writers, who believed that they excelled in swiftness all horses of a different colour.

Qui candore nives antecirent, cursibus auras.

It still seems a little singular, that a district described as stony, barren, and without proper pasturage, should ever have been celebrated for its horses.—

We
XXIV. As far as these people who are bald, the knowledge of the country and intermediate nations is clear and satisfactory; it may be obtained from the Scythians, who have frequent communication with them, from the Greeks of the port on the Borysthenes, and from many other places of trade on the Euxine. As these nations have seven different languages, the Scythians who communicate with them have occasion for as many interpreters.

XXV. Beyond these Argippæi, no certain intelligence is to be had, a chain of lofty and inaccessible mountains precluding all discovery. The people

We regard the Argippæi as the people who inhabited the eastern part of the Great Steppe, bordering northward on the great chain of mountains that divides the Steppe from S. E. to N. W. and which separates the northern from the southern waters in that quarter. It is a marked feature in the geography, and is described by the Arabian geographers to be remarkably lofty, steep, and difficult of access.

The Argippæi would also border eastward on the mountains that separate the Ocgur country from the Steppe, or which, perhaps with more propriety, may be regarded as the western declivity of the elevated region inhabited by the Kalmuc Eluths. A part of these mountains are named Argia and Argia in Strahterberg and the map of Russia. According to these suppositions the Argippæi must have occupied the northern part of the tract now in the possession of the greater or eastern horde of the Kirgees, who are dependent on China, as the middle and western hordes are on Russia.—Rennel.
people who are bald assert, what I can by no means believe, that these mountains are inhabited by men, who in their lower parts resemble a goat; and that beyond these are a race who sleep away six months of the year: neither does this seem at all more probable. To the east of the Argippæi it is beyond all doubt that the country is possessed by the Issedones; but beyond them to the north neither the Issedones nor the Argippæi know any thing more than I have already related.

XXVI. The Issedones have these, among other customs:—As often as any one loses his father, his relations severally provide some cattle; these they kill, and having cut them in pieces, they dismember also the body of the deceased, and, mixing the whole together, feast upon it; the head alone is preserved; from this they carefully remove the hair, and cleansing it thoroughly set it in gold 29: it is afterwards esteemed sacred, and produced

29 Set in gold.]—We learn from Livy, that the Boii, a people of Gaul, did exactly the same with respect to the sculls of their enemies.—Purgato inde capite ut mos iis est, calvum auro cælavere: idque sacrum vas iis erat, quo solennibus libarent.—See Livy, chap. xxiv. book 23.

It appears that the Issedones do the same by the sculls of their friends, as the Scythians and others with those of their inveterate enemies. The author has seen brought from Bootan,
produced in their solemn annual sacrifices. Every man observes the above rites in honour of his father, as the Greeks do theirs in memory of the dead. In other respects it is said that they

Bootan, nearly in the same region with Oegur, in the country of the Issedones, sculls that were taken out of temples or places of worship; but it is not known whether the motive to their preservation was friendship or enmity; it might very probably be the former. They were formed into drinking-bowls in the manner described by our author, Melpom. 65. by cutting them off below the eyebrows, and they were neatly varnished all over.—Rennel.

30 *In memory of the dead.*—The Greeks had anniversary days in remembrance of departed friends. These were indifferently termed *Nemesis,* as being solemnized on the festival of Nemesis, *Neoptera,* and *Nemesis.* This latter word seems to intimate that these were feasts instituted to commemorate the birth-days; but these, it appears, were observed by surviving relations and friends upon the anniversary of a person’s death. Amongst many other customs which distinguished these *Nemesis,* some were remarkable for their simplicity and elegance. They strewed flowers on the tomb, they encircled it with myrtle, they placed locks of their hair upon it, they tenderly invoked the names of those departed, and lastly they poured sweet ointments upon the grave.

These observances, with little variation, took place both in Greece and Rome.—See the beautiful Ode of Anacreon:

\[
\text{Τι σε δει λιθον μυρείζειν}
\text{Τι δε ηρ χείν ματαια;}
\text{Εμε μαλλος, ως ιτι ζω}
\text{Μυριστον, ροδοις δε κρατα}
\text{Πικασον.}
\]

Thus rendered by Cowley:

Why do we precious ointments show’r,
Noble wines why do we pour,

Beauteous
they venerate the principles of justice; and that
their females enjoy equal authority* with the
men.

XXVII. The Issedones themselves affirm, that
the country beyond them is inhabited by a race
of men who have but one eye, and by Gryphins
who are guardians of the gold.—Such is the in-
formation which the Scythians have from the
Issedones, and we from the Scythians; in the Scy-
thian tongue they are called Arimaspians, from
Arima, the Scythian word for one, and spu, an
eye.

Beauteous flowers why do we spread
Upon the mon'ments of the dead?
Nothing they but dust can shew,
Or bones that hasten to be so;
Crown me with roses whilst I live.

See also the much-admired apostrophe addressed by Virgil
to the memory of Marcellus:

Heu miserande puer, si qua fata aspera rumpas,
Tu Marcellus eris: manibus date lilia plenis,
Purpureos spargam flores, animamque nepotis
His saltem accumulem donis.  T.

* Rennel remarks, that this evinced a degree of refine-
ment far above the standard of Scythian nations. But as
we learn, he continues, that the Ocgurs were a lettered
nation, and that they alone furnished the conqueror Jenghis
Kan with secretaries: we are the less surprized at the re-
finements of their ancestors. The physical geography
of their country is such, being one of the most elevated tracts
in the center of Asia, as is likely to preserve national man-
ners through a long course of ages. P. 147.
XXVIII. Through all the region of which we have been speaking, the winter season, which continues for eight months, is intolerably severe and cold. At this time if water be poured upon the ground, unless it be near a fire, it will not make clay. The sea itself\textsuperscript{31}, and all the Cimmerian Bosphorus, is congealed; and the Scythians who live within the trench before mentioned make hostile incursions upon the ice, and penetrate with their waggons as far as Sindica\textsuperscript{*}. During eight months the climate is thus severe, and the remaining four are sufficiently cold. In this region the winter is by no means the same as in other

\textsuperscript{31} The sea itself.\textsuperscript{\textendash}The Greeks, who had no knowledge of this country, were of opinion that the sea could not be congealed; they consequently considered this passage of Herodotus as fabulous. The moderns, who are better acquainted with the regions of the north, well know that Herodotus was right.\textemdash Larcher.

Upon this subject the following whimsical passage occurs in Macrobius.\textemdash Nam quod Herodotus historiarum scriptor, contra omnium ferme qui hae quasiverunt, opinionem scripsit, mare Bosporicum, quod et Cimmerium appellat, earumque partium mare omne quod Scythicum dicitur, id gelu constringit et consistere, alter est quam putatur; nam non marina aqua contrahitur, sed quia plurimum in illis regionibus fluviorum est, et paludum in ipsa maria influentium, superficies maris cui dulces aquae innatant, congelascit, et incolumi aqua marina videtur in mari gelu, sed de advenis undis coactum, &c.

\textsuperscript{*} This region is opposite to the Cimmerian Bosphorus. See chapter 86, where Sindica is placed opposite to the river Thermodon.
other climates; for at this time, when it rains abundantly elsewhere, it here scarcely rains at all, whilst in the summer the rains are incessant. At the season when thunder is common in other places, here it is never heard, but during the summer it is very heavy. If it be ever known to thunder in the winter, it is considered as ominous. If earthquakes happen in Scythia, in either season of the year, it is thought a prodigy. Their horses are able to bear the extremest severity of the climate, which the asses and mules frequently cannot; though in other regions the cold which destroys the former has little effect upon the latter.

XXIX. This circumstance of their climate seems to explain the reason why their cattle are without

32 Asses and mules frequently cannot.]—This assertion of Herodotus is confirmed by Pliny, who says, “Ipsum animal (asinus) frigoris maxime impatiens: ideo non generatur in Ponto, nec æquinocitis verno, etcetera pecuà admissitur sed solstitio.” The ass is a native of Arabia; the warmer the climate in which they are produced, the larger and the better they are. “Their size and their spirit,” says Mr. Pennant, “regularly decline as they advance into colder regions.” Hollingshed says, that in his time “our lande did yeele no asses.” At present they appear to be naturalized in our country; and M. Larcher’s observation, that they are not common in England, must have arisen from misinformation. That the English breed of asses is comparatively less beautiful must be acknowledged.—T.
without horns; and Homer in the Odyssey has a line which confirms my opinion:—"And Libya, where the sheep have always horns;" which is as much as to say, that in warm climates horns will readily grow; but in places which are extremely cold they either will not grow at all, or are always diminutive.

XXX. The peculiarities of Scythia are thus explained from the coldness of the climate; but as I have accustomed myself from the commencement of this history to deviate occasionally from my subject, I cannot here avoid expressing my surprize, that the district of Elis never produces mules; yet the air is by no means cold, nor can any other satisfactory reason be assigned. The inhabitants themselves believe that their not possessing mules is the effect of some curse.

When

33 Without horns.]—Hippocrates, speaking of the Scythian chariots, says, they are drawn by oxen which have no horns, and that the cold prevents their having any.—Larcher.

34 Always horns.]—The line here quoted from Homer is thus rendered by Pope:

And two fair crescents of translucent horn
The brows of all their young increase adorn. T.

35 Of some curse.]—The following passage is found in Plutarch's Greek questions.

Q. Why do the men of Elis lead their mares beyond their borders when they would have them covered?

A. Was
When their mares require the male, the Eleans take them out of the limits of their own territories,

A. Was it because Ænomaus, being remarkable for his great love of horses, imprecated many horrid curses upon mares that should be (thus) covered in Elis, and that the people, in terror of his curses, will not suffer it to be done within their district?

It is indisputably evident, that something is omitted or corrupted in this passage of Plutarch. As it stands at present it appears that the mares were to be covered by horses, and so the translators have rendered it; but the love of Ænomaus for horses, would hardly lead him to so absurd an inconsistency as that of cursing the breed of them within his kingdom. The truth is, it was the breed of mules which he loaded with imprecations; and it was only when the mares were to be covered by asses, that it was necessary to remove them, to avoid falling under his curse. Some word expressing this ought therefore to be found in Plutarch, and the suspicion of corruption naturally falls at once on the unintelligible word ἱσθεξ, which is totally omitted in the Latin version, and given up by Xylander as inexplicable; Wesseling would change it to ἴσθέξ, but that does not remove the fault: if we read ἱσθέξ all will be easy. The question will then stand thus: "Why do the men of Elis lead those mares which are to receive asses, beyond their borders to be covered?" And we must render afterwards, "that should be thus covered," instead of covered only: ὡρὸςκε, being a compound formed at pleasure, according to the genius of the Greek language, but not in common use, might easily be corrupted by a careless or ignorant transcriber. I should not have dwelt so long on a verbal criticism of this kind, had not the emendation appeared important, and calculated to throw additional light on this passage of Herodotus.

Conformable to this is the account of Pausanias:—"In Elis," says he, "mares will not produce from asses, though they
XXXI. Concerning those feathers, which, as the Scythians say, so cloud the atmosphere that they cannot penetrate nor even discern what lies beyond them, my opinion is this:—In those remoter regions there is a perpetual fall of snow, which, as may be supposed, is less in summer than in winter. Whoever observes snow falling continually, will easily conceive what I say; for it has a great resemblance to feathers. These regions, therefore, which are thus situated remotely to the north, are uninhabitable from the unremitting severity of the climate; and the Scythians, with the neighbouring nations, mistake the snow for feathers. But on this subject I have said quite enough.

they will in the places contiguous: this the people impute to some curse.” Book v. p. 384.

And Eustathius has a similar remark in his Comment on Dionysius, l. 409.

Upon the above Larcher remarks, that this doubtless was the reason why the race of chariots drawn by mules was abolished at the Olympic games, which had been introduced there in the seventieth Olympiad by Thersias of Thessaly.

—T.

35 Snow for feathers.]—The comparison of falling snow to fleeces of wool, as being very obvious and natural, is found in abundance of writers, ancient and modern.

See Psalm cxlvii. ver. 5.—Who sendeth his snow like wool.
XXXII. Of the Hyperboreans\(^{37}\) neither the Scythians nor any of the neighbouring people, the Issedones alone excepted, have any knowledge; and indeed what they say merits but little attention. The Scythians speak of these as they do of the Arimaspians. It must be confessed that Hesiod mentions these Hyperboreans, as Homer also does in the Epigonoi\(^{38}\), if he was really the author of those verses.

XXXIII. On this subject of the Hyperboreans,

Martial beautifully calls snow densum tacitarum vellus squarum.

In whose capacious womb
A vapoury deluge lies to snow congeal’d;
Heavy they roll their fleecy world along.—Thomson.

\(^{37}\) Hyperboreans.\)—It appears from the Scholiast on Pindar, that the Greeks called the Thracians Boreans; there is therefore great probability that they called the people beyond these the Hyperboreans.—Larcher.—Doubtless, the inhabitants of Russia and part of Siberia. The Hyperboreans of the Romans corresponded with the Gog and Magog of the Arabians.

\(^{38}\) Epigonoi.\)—That Homer was the author of various poems besides the Iliad and the Odyssey, there seems little reason to doubt; that he was the author of these in question can hardly be made appear. The Scholiast of Aristophanes assigns them to Antimachus; but Antimachus of Colophon was later than Herodotus, or at least his contemporary. The subject of these verses were the supposed authors of the second Theban war. At the time in which Homer flourished, the wars of Thebes and of Troy were the subjects of universal curiosity and attention.—T.
reans, the Delians are more communicative. They affirm, that some sacred offerings of this people, carefully folded in straw, were given to the Scythians, from whom descending regularly through every contiguous nation, they arrived at length at the Adriatic. From hence, transported towards the south, they were first of all received by the Dodoneans of Greece; from them again they were transmitted to the gulph of Melis; whence passing into Euboea, they were sent from one town to another, till they arrived at Carystus; not stopping at Andros, the Carystians carried them to Tenos, the Tenians to Delos; at which place the Delians affirm they came as we have related. They farther observe, that to bring these offerings the Hyperboreans

39 Through every contiguous nation.—On this subject the Athenians have another tradition.—See Pausanias, c. xxxi. p. 77.

According to them, these offerings were given by the Hyperboreans to the Arimaspians, by the Arimaspians to the Scythians, by the Scythians to the Greeks from thence passed them from one to another, till they arrived at Prasis, a place dependant on Athens; the Athenians ultimately sent them to Delos. "This," says M. Larcher, "seems to me a less probable account than that of the Delians."

40 Hyperboreans.—Upon the subject of the Hyperboreans, our learned mythologist Mr. Bryant has a very curious chapter. The reader will do well to consult the whole; but the following extract is particularly applicable to the chapter before us.
sent two young women, whose names were Hyperoche and Laodice: five of their countrymen accompanied them as a guard, who are held in great veneration at Delos, and called the Peripheres. As these men never returned, the Hyperboreans were greatly offended, and took the following method to prevent a repetition of this evil:—They carried to their frontiers their offerings,

Of all other people the Hyperboreans seem most to have respected the people of Delos. To this island they used to send continually mystic presents, which were greatly reverenced: in consequence of this, the Delians knew more of their history than any other community of Greece. Callimachus, in his hymn to Delos, takes notice both of the Hyperboreans and their offerings.

This people were esteemed very sacred; and it is said that Apollo, when exiled from heaven, and when he had seen his offspring slain, retired to their country. It seems he wept; and there was a tradition that every tear was amber.

See Apollonius Rhodius, book iv. 611.

The Celtic sages a tradition hold,
That every drop of amber was a tear
Shed by Apollo, when he fled from heaven;
For sorely did he weep, and sorrowing pass'd
Thro' many a doleful region, till he reach'd
The sacred Hyperboreans.

See Bryant, vol. iii. 491.

41 Peripheres.]—Those whom the different states of Greece sent to consult Apollo, or to offer him sacrifice in the name of their country, they called Theoroi. They gave the name of Deliastoi to those whom they sent to Delos; and of Pythastoi to those who went to Delphi.—Larcher.
offerings, folded in barley-straw*, and committing them to the care of their neighbours, directed them to forward them progressively, till, as is reported, they thus arrived at Delos. This singularity observed by the Hyperboreans is practised, as I myself have seen, amongst the women of Thrace and Pæonia, who in their sacrifices to the regal Diana make use of barley-straw.

XXXIV. In honour of the Hyperborean virgins who died at Delos, the Delian youth of both sexes celebrate certain rites, in which they cut off their hair; this ceremony is observed by virgins previous to their marriage, who, having deprived

* Pliny mentions this circumstance, and seems to intimate that the Hyperboreans suspected that these individuals were not fairly dealt with. Pliny says these offerings were composed of the first fruits of their corn.

42 Cut off their hair.]—The custom of offering the hair to the gods is of very great antiquity. Sometimes it was deposited in the temples, as in the case of Berenice, who consecrated hers in the temple of Venus; sometimes it was suspended upon trees.—Larcher.

When the hair was cut off in honour of the dead, it was done in a circular form. Allusion is made to this ceremony in the Electra of Sophocles, line 52. See also Ovid:

Scissae cum veste capillos.

This custom, by the way, was strictly forbidden by the Jews. Pope has a very ludicrous allusion to it:—

When fortune or a mistress frowns,
Some plunge in business, others shave their crowns.—T.
deprived themselves of their hair, wind it round a spindle, and place it on the tomb. This stands in the vestibule of the temple of Diana, on the left side of the entrance, and is shaded by an olive, which grows there naturally. The young men of Delos wind some of their hair round a certain herb, and place it on the tomb.—Such are the honours which the Delians pay to these virgins.

XXXV. The Delians add, that in the same age, and before the arrival of Hyperoche and Laodice at Delos, two other Hyperborean virgins came there, whose names were Argis and Opis; their object was to bring an offering to Lucina, in acknowledgment of the happy delivery of their females; but that Argis and Opis were accompanied by the deities themselves. They are, therefore,

43 Opis.]—Orion, who was beloved by Aurora, and whom Phercecydes asserts to have been the son of Neptune and Euryale, or, according to other authors, of Terra, endeavouring to offer violence to Opis, was slain with an arrow by Diana.

The first Hyperboreans who carried offerings to Delos were, according to Callimachus, named Oupis, Loxo, and Hecaerge, daughter of Boreas.—Larcher.

Opis is thus mentioned by Virgil:

Opis ad Ætherium pennis aufertur Olympum.

According to Servius, Opis, Loxo, and Hecaerge, were synonymous terms for the moon. Opis was also the name of a city on the Tigris.—T.
therefore, honoured with other solemn rites. The women assemble together, and in a hymn composed for the occasion by Olen of Lycia, they call on the names of Argis and Opis. Instructed by these the islanders and Ionians hold similar assemblies, introducing the same two names in their hymns. This Olen was a native of Lycia, who composed other ancient hymns in use at Delos. When the thighs of the victims are consumed on the altar, the ashes are collected and scattered over the tomb of Opis and Argis.

44 Olen of Lycia.—Olen, a priest and very ancient poet, was before Homer; he was the first Greek poet, and the first also who declared the oracles of Apollo. The inhabitants of Delphi chanted the hymns which he composed for them. In one of his hymns he called Ilithya the mother of Love; in another he affirmed that Juno was educated by the Hours, and was the mother of Mars and Hebe.—Larcher.

The word Olen was properly an Egyptian sacred term, and expressed Olen, Olenus, Ailinus, and Linus, but is of unknown meaning. We read of Olenium sidus, Olenia capella, and the like.

Nascitur Oleniae sidus pluviale capella.—Ovid.

A sacred stone in Elis was called Petra Olenia. If then this Olen, styled an Hyperborean, came from Lycia and Egypt, it makes me persuaded of what I have often suspected, that the term Hyperborean is not of that purport which the Grecians have assigned to it. There were people of this family from the north, and the name has been distorted, and adapted solely to people of those parts. But there were Hyperboreans from the east, as we find in the history of Olen.—See Bryant further on this subject, vol. iii. 492-3.
Argis. This tomb is behind the temple of Diana, facing the east, and near the place where the Ceians celebrate their festivals.

XXXVI. Concerning these Hyperboreans we have spoken sufficiently at large, for the story of Abaris, who was said to be an Hyperborean, and to have made a circuit of the earth without food, and carried on an arrow, merits no attention. As there are Hyperboreans, or inhabitants of the extreme parts of the north, one would suppose there ought also to be Hypernotians, or inhabitants of the corresponding parts of the south. For my own part I cannot but think it exceedingly ridiculous to hear some men talk of the circumference of the earth, pretending,

45 Abaris.]—Jamblicus says of this Abaris, that he was the disciple of Pythagoras; some say he was older than Solon; he foretold earthquakes, plagues, &c. Authors differ much as to the time of his coming into Greece: Harpocratin says it was in the time of Cyrus.—T.

45 On an arrow.]—There is a fragment preserved in the Anecdota Graeca, a translation of which Larcher gives in his notes, which throws much light upon this singular passage; it is this: a famine having made its appearance amongst the Hyperboreans, Abaris went to Greece, and entered into the service of Apollo. The deity taught him to declare oracles. In consequence of this, he travelled through Greece, declaring oracles, having in his hand an arrow, the symbol of Apollo.—An acute friend has suggested to me that this must be an allusion to the introduction of the letters of the alphabet. It is certain that Herodotus did not understand it.
tending, without the smallest reason or probability, that the ocean encompasses the earth*; that the earth is round, as if mechanically formed so; and that Asia is equal to Europe. I will, therefore, concisely describe the figure and the size of each of these portions of the earth.

XXXVII. The region occupied by the Persians extends southward to the Red Sea; beyond these to the north are the Medes, next to them are the Sapirians†. Contiguous to the Sapirians, and where the Phasis empties itself into the Northern Sea, are the Colchians. These four nations occupy the space between the two seas.

XXXVIII. From hence to the west two tracts of land stretch themselves towards the sea, which I shall describe: The one on the north side commences at the Phasis, and extends to the sea along the Euxine and the Hellespont, as far as the Sigeum of Troy. On the south side it begins at the bay of Margandius‡, contiguous to Phœnicia, and is continued to the sea as far as the Triopian

* We might be induced to conclude, from this incidental sneer of Herodotus, that there were some excellent astronomers and geographers in his time, although, like Copernicus and others, they did not obtain much credit among their cotemporaries.
† These are elsewhere called Saperians.
‡ The Gulph of Issus. The Mariandini are on the coast of the Euxine.
Triopian promontory; this space of country is inhabited by thirty different nations.

XXXIX. The other district commences in Persia, and is continued to the Red Sea. Besides Persia, it comprehends Assyria and Arabia, naturally terminating in the Arabian Gulph, into which Darius introduced a channel of the Nile. The interval from Persia to Phœnicia is very extensive. From Phœnicia it again continues beyond Syria of Palestine, as far as Ægypt, where

---

47 The Red Sea.]—It is necessary to be observed, that not only the Arabian Gulph was known by this name, but also the Persian Gulph and the Southern Ocean, that is to say, that vast tract of sea which lies between the two gulphs.—Larcher.

What Herodotus calls the Erythrean Sea, must be understood to be that between Ethiopia and India, generally. This includes the Arabian Gulph, but which he particularly distinguishes by that name in several places, as also the sea into which the Euphrates and Tigris discharge themselves, but which Herodotus conceived to be an open sea, and not a gulph.

Both Herodotus and Agathemenum industriously distinguish the Erythrean Sea from the Arabian Gulph, though the latter was certainly so called, and had the name of Erythrean. The Parthic empire, which included Persis, is by Pliny said to be bounded to the south by the Mare Rubrum, which was the boundary also of the Persians; by Mare Rubrum he here means the great southern sea.—Bryant.

48 Darius introduced.]—See book the second, chap. 158.
it terminates. The whole of this region is occupied by three nations only.—Such is the division of Asia from Persia westward.

XL. To the east beyond Persia, Media, the Sapirians and Colchians, the country is bounded by the Red Sea; to the north by the Caspian and the river Araxes, which directs its course towards the east. As far as India, Asia is well inhabited; but from India eastward the whole country is one vast desert, unknown and unexplored.

XLI. The second tract comprehends Lybia, which begins where Egypt ends. About Egypt the country is very narrow. One hundred thousand orgyiae, or one thousand stadia, comprehend the space between this and the Red Sea. Here the country expands, and takes the name of Lybia.

XLII. I am much surprised at those who have

---

49 This and the Red Sea.—Here we must necessarily understand the isthmus between the Mediterranean and the Arabian Gulph or Red Sea. Herodotus says, book ii, chap. 158, that the shortest way betwixt one sea and the other was one thousand stadia. Agrippa says, on the authority of Pliny, that from Pelusium to Arsinoë on the Red Sea was one hundred and twenty-five miles, which comes to the same thing, that author always reckoning eight stadia to a mile.—Larcher.
have divided and defined the limits of Lybia, Asia, and Europe, betwixt which the difference is far from small. Europe, for instance, in length much exceeds the other two, but is of far inferior breadth: except in that particular part which is contiguous to Asia, the whole of Lybia is surrounded by the sea. The first person who has proved this, was, as far as we are able to judge, Necho king of Egypt. When he had desisted from his attempt to join by a canal the Nile with the Arabian Gulph, he dispatched some vessels, under the conduct of Phœnicians, with directions to pass by the columns of Hercules, and

50 Dispatched some vessels.—This Necho is the same who in Scripture is called Pharaoh Necho. He made an attempt to join the Nile and the Red Sea; by drawing a canal from the one to the other; but after he had consumed an hundred and twenty thousand men in the work, he was forced to desist from it. But he had better success in another undertaking; for having gotten some of the expertest Phœnician sailors into his service, he sent them out by the Red Sea, through the straits of Babelmandel, to discover the coasts of Africa, who having sailed round it came home the third year through the straits of Gibraltar and the Mediterranean Sea, which was a very extraordinary voyage to be made in those days, when the use of the loadstone was not known. This voyage was performed about two thousand one hundred years before Vasquez de Gama, a Portugueze, by discovering the Cape of Good Hope in 1497, found out the same way from hence to the Indies by which these Phœnicians came from thence. Since that it hath been made the common passage thither from all these western parts of the world.—Prideaux.
and after penetrating the Northern Ocean to return to Egypt. These Phoenicians, taking their course from the Red Sea, entered into the Southern Ocean*: on the approach of autumn they landed in Lybia, and planted some corn in the place where they happened to find themselves; when this was ripe, and they had cut it down, they again departed. Having thus consumed two years, they in the third doubled the columns of Hercules, and returned to Egypt. Their relation may obtain attention from others, but to me it seems incredible, for they affirmed, that

* Meaning the Ocean that washes Africa on the East. The circumnavigators are said to have entered the Southern Ocean, when they quitted the Arabian Gulph.

Dr. Vincent observes (see his Nearchus, p. 275, 6.) that it is very doubtful whether this voyage was performed by the Phoenicians; it requires more evidence, more particulars, and a clearer detail of facts to enable us to form a judgment. See also the very learned Doctor's Periplus, p. 175, where he thus expresses himself.

It must be confessed that the facts he gives us of this voyage though few are consistent. The shadow falling to the South, the delay of stopping to sow grain and reap a harvest, and the space of three years employed in the circumnavigation, joined with the simplicity of the narrative, are all points so strong, and so convincing, that if they are insisted on by those who believe the possibility of effecting the passage by the ancients, no arguments to the contrary, however founded upon a different opinion, can leave the mind without a doubt upon the question.

51 To me it seems incredible.—Herodotus does not doubt that the Phoenicians made the circuit of Africa, and returned to
having sailed round Lybia, they had the sun on their right hand.—Thus was Lybia for the first time known.

XLIII. If the Carthaginian account may be credited, Sataspes, son of Teaspes, of the race of the Achæmenides, received a commission to circumnavigate Lybia, which he never executed: alarmed by the length of the voyage, and the solitary appearance of the country, he returned without accomplishing the task enjoined him by his mother. This man had committed violence on a virgin, daughter of Zopyrus, son of Mega-byzus, for which offence Xerxes had ordered him to be crucified; but the influence of his mother, who was sister to Darius, saved his life. She avowed, however, that it was her intention to inflict a still severer punishment upon him, by obliging him to sail round Lybia, till he should arrive at the Arabian Gulph. To this Xerxes assented, and Sataspes accordingly departed for Ægypt; he here embarked with his crew, and proceeded to Ægypt by the straits of Gibraltar; but he could not believe that in the course of the voyage they had the sun on their right hand. This, however, must necessarily have been the case after the Phœnicians had passed the line; and this curious circumstance, which never could have been imagined in an age when astronomy was yet in its infancy, is an evidence to the truth of a voyage, which without this might have been doubted.—Larcher.
proceeded to the columns of Hercules; passing these, he doubled the promontory which is called Syloes*, keeping a southern course. Continuing his voyage for several months, in which he passed over an immense tract of sea, he saw no probable termination of his labours, and therefore sailed back to Egypt. Returning to the court of Xerxes, he amongst other things related, that in the most remote places he had visited he had seen a people of diminutive appearance, clothed in red garments52, who on the approach of his vessel

* Often written Soloeis.

It appears, says Rennel, that the Soloeis of Hanno, and of Scylax, and the Solis of Pliny, and of Ptolemy, must have been situated between the Capes Blanco and Geen on the coast of Morocco, in which quarter also the Soloeis of Herodotus, as being a part of the inhabited tract, must of necessity be situated.

52 Red Garments.—This passage has been indifferently rendered Phœnician garments, and red garments; the original εἴσεβην φόινικίν.—Larcher, dissenting from both these, translates it "des habits de palmier;" his reasoning upon it does not appear quite satisfactory. "It seems very suspicious," says he, "that people so savage as these are described by Herodotus, should either have cloth or stuff, or if they had, should possess the means of dyeing it red." But in the first place, Herodotus does not call these a savage people; and, in the next, the narrative of Sataspes was intended to excite astonishment, by representing to Xerxes what to him at least seemed marvellous. That a race of uncivilized men should clothe themselves with skins, or garments made of the leaves or bark of trees, could not appear wonderful to a subject of Xerxes, to whom many barbarous nations were perfectly
vessel to the shore, had deserted their habitations, and fled to the mountains. But he affirmed, that his people, satisfied with taking a supply of provisions, offered them no violence. He denied the possibility of his making the circuit of Lybia, as his vessel was totally unable to proceed. Xerxes gave no credit to his assertions; and, as he had not fulfilled the terms imposed upon him, he was executed according to his former sentence. An eunuch belonging to this Sataspes, hearing of his master's death, fled with a great sum of money to Samos, but he was there robbed of his property by

perfectly well known. His surprise would be much more powerfully excited, at seeing a race of men of whom they had no knowledge, habited like the members of a civilized society; add to this, that granting them to be what they are not here represented, Barbarians, they might still have in their country some natural or prepared substances, communicative of different colours. I therefore accede to the interpretation of rubra utentes veste, which is given by Valla and Gronovius, and which the word Φοινίκη will certainly justify.—T.

53 Unable to proceed.]—This was, according to all appearances, the east wind which impeded the progress of the vessel, which constantly blows in that sea during a certain period.—Larcher.—See the note of Wesseling.

* This, says Major Kennel, reminds me of the fate of Sir Walter Raleigh. It is very possible, continues the Major; that Sataspes was discouraged from prosecuting his voyage by the adverse winds and currents that prevail on the coast of Sierra Leone, &c. from April to October, and which would be felt by those who left Ægypt or Carthage in the Spring, a more likely season to undertake an expedition of this sort than in winter, when the order of things is different.—P. 716.
MELPOMENE.

by a native of the place, whose name I know, but forbear to mention.

XLIV. A very considerable part of Asia was first discovered by Darius. He was extremely desirous of ascertaining where the Indus meets the ocean, the only river but one in which crocodiles are found; to effect this, he sent, among other men in whom he could confide, Scylax of Caryandia. Departing from Caspatyrus in the Pactyian

54 Scylax of Caryandia.—About this time, Darius being desirous to enlarge his dominions eastward, in order to the conquering of those countries, laid a design of first making a discovery of them: for which reason, having built a fleet of ships at Caspatyrus, a city on the river Indus, and as far upon it as the borders of Scythia, he gave the command of it to Scylax, a Grecian of Caryandia, a city in Caria, and one well skilled in maritime affairs, and sent him down the river to make the best discoveries he could, of all the parts which lay on the banks of it on either side; ordering him for this end to sail down the current till he should arrive at the mouth of the river; and that then passing through it into the Southern Ocean, he should shape his course westward, and that way return home. Which orders he having exactly executed, he returned by the straits of Babelmandel and the Red Sea; and on the thirtieth month after his first setting out from Caspatyrus landed in Egypt, at the same place from whence Necho king of Egypt formerly sent out his Phœnicians to sail round the coasts of Africa, which it is most likely was the port where now the town of Suez stands, at the hither end of the said Red Sea.—Prideaux.

There were three eminent persons of this place, and of this name:—The one flourished under Darius Hystaspes, the second under Darius Nothus, the third lived in the time of Polybius.
Pactyian territories, they followed the eastern course of the river, till they came to the sea; then sailing westward, they arrived, after a voyage of thirty months, at the very point from whence, as I have before related, the Egyptian prince dispatched the Phoenicians to circumnavigate Libya. After this voyage Darius subdued the Indians, and became master of that ocean: whence it appears that Asia in all its parts, except those more remotely to the east, entirely resembles Libya*.

Polybius. This was also the name of a celebrated river in Cappadocia.—*T.

* See Vincent as before quoted, Nearchus, p. 275, and Periplus, 178. From the last I extract what follows, as highly deserving attention.

The name of Sataspes still lives in the same page of Herodotus, whom Xerxes put to death because he attempted the same circumnavigation in vain from the straits of Gades; and the following page celebrates Scylax of Caryandia, who passed from the Indus into the Gulph of Arabia, to the point from whence the Phoenicians had commenced their expedition. I have as little faith in the voyage of Scylax as in that of the Phoenicians; but it is unjust that Darius should suffer the name of the inferior to survive, while Necho should totally suppress the fame of the superior. The great argument against both is the total failure of all consequences whatsoever, the total want of all collateral evidence, and the total silence of all other historians, but those who have copied from Herodotus.

This argument of the learned Dean seems to me conclusive: it is surely improbable that so great a discovery should neither be followed up, nor substantiated by other evidence, nor proclaimed by other writers. Major Renel, however, thinks otherwise, and what he says of course demands the highest respect.—See p. 718.
XLV. It is certain that Europe has not hitherto been carefully examined; it is by no means determined whether to the east and north it is limited by the ocean. In length it unquestionably exceeds the two other divisions of the earth; but I am far from satisfied why to one continent three different names, taken from women, have been assigned. To one of these divisions some have given as a boundary the Ægyptian Nile, and the Colchian Phasis; others the Tanais, the Cimmerian Bosphorus, and the Palus Mæotis. The names of those who have thus distinguished the earth, or the first occasion of their different appellations, I have never been able to learn. Lybia, is by many of the Greeks said to have been so named from Lybia, a woman of the country; and Asia from the wife of Prometheus. The Lydians contradict this, and affirm that Asia was so called from Asias, a son of Cotys, and grandson of Manis, and not from the wife of Prometheus; to confirm this, they adduce

55 Asia.]—In reading the poets of antiquity, it is necessary carefully to have in mind the distinction of this division of the earth into Asia Major and Minor.—When Virgil says

Postquam res Asiae, Priamique evertere gentem
Immeritam visum superis,

it is evident that he can only mean to speak of a small portion of what we now understand to be Asia; it may not be amiss to remember, that there was a large lake of this name near Mount Tmolus, which had its first syllable long.
adduce the name of a tribe at Sardis, called the Asian tribe. It has certainly never been ascertained, whether Europe be surrounded by the ocean: it is a matter of equal uncertainty, whence or from whom it derives its name. We cannot willingly allow that it took its name from the Syrian Europa, though we know that, like the other two, it was formerly without any. We are well assured that Europa was an Asiatic, and that she never saw the region which the Greeks now call Europe; she only went from Phœnicia to Crete, from Crete to Lycia.—I shall now quit this subject, upon which I have given the opinions generally received.

XLVI. Except Scythia, the countries of the Euxine, against which Darius undertook an expedition, are of all others the most barbarous; among the people who dwell within these limits, we have found no individual of superior learning and accomplishments, but Anacharsis the Scythian.

Longa canoros
Dant per colla modos, sonat amnis et Asia longe
Pulsat palus.

By Asia palus, the poet probably meant the Lake of Grygaus, near Sardis, and beneath mount Tmolus.—T.

56 Anacharsis.]—Of Anacharsis the life is given at some length by Diogenes Laertius; his moral character was of such high estimation, that Cicero does not scruple to call him sobrius, continens, abstinens, et temperans. He gave rise to

Vol. II, D
thian. Even of the Scythian nation I cannot in general speak with extraordinary commendation; they have, however, one observance, which for its wisdom excels every thing I have met with. The possibility of escape is cut off from those who attack them; and if they are averse to be seen, their places of retreat can never be discovered: for they have no towns nor fortified cities, their habitations they constantly carry along with them, their bows and arrows they manage on horseback, and they support themselves not by agriculture, but by their cattle; their constant abode

the proverb, applicable to men of extraordinary endowments, of Anacharsis inter Scythes: he flourished in the time of Solon. The idea of his superior wisdom and desire of learning, has given rise to an excellent modern work by the Abbé Barthelemy, called the Voyage du jeune Anacharsis. With respect to what Herodotus here says concerning Anacharsis, he seemingly contradicts himself in chap. xcv and xcvi of this book, where he confesses his belief that Zamolxis, the supposed deity of the Scythians, was a man eminent for his virtue and his wisdom.

Dicenus also was a wise and learned Scythian; and one of the most beautiful and interesting of Lucian’s works is named from a celebrated Scythian physician, called Toxaris.

It must be remembered, that subsequent to the Christian æra many exalted and accomplished characters were produced from the Scythians or Goths.—T.

57 By their cattle.—“The skilful practitioners of the medical art,” says Mr. Gibbon, “may determine, if they are able to determine, how far the temper of the human mind may be affected by the use of animal or of vegetable food; and
abode may be said to be in their waggons. How can a people so circumstanced afford the means of victory, or even of attack?

and whether the common association of carnivorous and cruel, deserves to be considered in any other light than that of an innocent, perhaps a salutary prejudice of humanity. Yet if it be true, that the sentiment of compassion is imperceptibly weakened by the sight and practice of domestic cruelty, we may observe that the horrid objects which are disguised by the arts of European refinement are exhibited in their naked and most disgusting simplicity in the tent of a Tartarian shepherd. The ox or the sheep are slaughtered by the same hand from which they were accustomed to receive their daily food; and the bleeding limbs are served with very little preparation at the table of their unfeeling murderer."—Mr. Gibbon afterward gives the reader the following curious quotation from the Emile of Rousseau:

"Il est certain que les grands mangeurs de viande sont en general cruel et féroces plus que les autres hommes. Cette observation est de tous les lieux, et de tous les temps: la barbarité Angloise est connue," &c. —I hope this reproach has long ceased to be applied to England by those who really know it, and that the dispositions of our countrymen may furnish a proof against the system, in favour of which they were thus adduced.

As for Rousseau, he deserves to be lashed for his impudence: for it is very certain that the French have committed more cruelties within fifteen years, than all the flesh-eaters in the world ever committed in fifteen hundred.

58 In their waggons.]—See the advice of Prometheus to Io, in Æschylus:

First then, from hence Turn to the orient sun, and pass the height Of these uncultur'd mountains: thence descend To where the wandering Scythians, train'd to bear The distant-wounding bow, on wheels aloft Roll on their wattl'd cottages. Potter.

See also Gibbon's description of the habitation of more modern
LXVII. Their particular mode of life may be imputed partly to the situation of their country, and the advantage they derive from their rivers; their lands are well watered, and well adapted for pasturage. The number of rivers is almost equal to the channels of the Nile; the more celebrated of them, and those which are navigable to the sea I shall enumerate; they are these: The Danube*, having five mouths, the modern Scythians. "The houses of the Tartars are no more than small tents of an oval form, which afford a cold and dirty habitation for the promiscuous youth of both sexes. The palaces of the rich consist of wooden huts, of such a size that they may be conveniently fixed on large waggons, and drawn by a team, perhaps of twenty or thirty oxen." The same circumstance respecting the Scythians is thus mentioned by Horace:

Campestres melius Scythe,
Quorum planastra vagas rite trahunt domos,
Vivunt et rigidi Getæ
Immetata quibus jugera, liberas
Fruges et Cereunm serunt,
Nec cultura placet longior annua. T.

* Of these rivers the Danube is the most Western, the Tanaïs the most Eastern.

The Tyres, or Tyras, answers in all respects to the Dneister. There were many rivers which bore the name of Hypanis, but this, as Major Rennel, p. 56, observes, answers to the Bog. The Boristhenes is the largest river next to the Danube. The port of Cherson, established by Catherine of Russia, seems to answer to the situation of the Boristhenites. The following three rivers, viz. the Panticapes, Hypacyris, and Gerrhus, must have been of inferior note, nor have their situations been defined by modern geographers. The last river, the Tanaïs, is unquestionably the Don. Don, says Major
Tyres, the Hypanis, the Borysthenes, Panticapæs, Hypacyris, Gerrhus, and the Tanais.

XLVIII. No river of which we have any knowledge is so vast as the Danube; it is always of the same depth, experiencing no variation from summer or from winter. It is the first river of Scythia to the east, and it is the greatest of all, for it is swelled by the influx of many others: there are five which particularly contribute to increase its size; one of these the Greeks call Pyrcton, the Scythians Porata; the other four are the Tiarantus, Ararus*, Naparis, and the Ordessus. The first of these rivers is of immense size; flowing toward the east, it mixes with the Danube: the second, the Tiarantus, is smaller, having an inclination to the west: betwixt these the Ararus, Naparis, and Ordessus have their course, and empty themselves into the Danube. These rivers have their rise in Scythia, and swell the waters of the Danube. 59.

Major Rennel, seems to be a corruption of Tana, the proper name of a city which stood on or near the site of Azoph. Tana and Tanais are obviously the same.

* D'Anville recognises the Porata in the Pruth, the Ararus in the Siret, the Naparis in the Prava, and the Ordessus in the Argis; but the Tiarantus he has not made out. See Rennel, p. 9.

59 Waters of the Danube.]—Mr. Bryant's observations on this river are too curious to be omitted.

The river Danube was properly the river of Noah, expressed
XLIX. The Maris also, commencing among the Agathyrsi, is emptied into the Danube, which is likewise the case with the three great rivers, Atlas, Auras, and Tibisis; these flow from the summits of Mount Hæmus, and have the same termination. Into the same river are received the waters of the Athres, Noes, and Artanes, which flow through Thrace, and the country of the Thracian Crobyzi. The Cius, which, rising in Pæonia, near Mount Rhodope, divides Mount Hæmus, is also poured into the Danube. The Angrus comes from Illyria, and with a northward course passes over the Tribalian plains, and mixes with

pressed Da-Nau, Da-Nauos, Da-Nauvas, Da-Naubus. He-
rodotus plainly calls it the River of Noah, without the prefix; but appropriates the name only to one branch, giving the name of Iter to the chief stream.

It is mentioned by Valerius Flaccus:

Quas Tanais, flavusque Lycus, Hypanisque Noasque.

This some would alter to Novasque, but the true reading is ascertained from other passages where it occurs; and particularly by this author, who mentions it in another place:

Hyberna qui terga Noæ, gelidumque securi
Haurit, et in totâ non audit Amazona ripâ.

Most writers compound it with the particle Da, and express it Da-Nau, Da-Nauvis, Da-Naubis. Stephanus Byzantinus speaks of it both by the name of Danoubis, and Danousis, &c.; vol. ii. 339.

The reader will find a very fine description of the Danube and its alluvions, in Polybius, book iv. chap. 5. — It is obvious that Herodotus had never heard of the Ganges, the Burram-pooter, and other great rivers of India and China.
with the Brongus; the Brongus meets the Danube, which thus receives the waters of these two great rivers. The Carpis, moreover, which rises in the country beyond the Umbrici, and the Alpis, which flows towards the north, are both lost in the Danube. Commencing with the Celtæ, who, except the Cynæae, are the most remote inhabitants in the west of Europe, this river passes directly through the center of Europe, and by a certain inclination enters Scythia.

L. By the union of these and of many other waters, the Danube becomes the greatest of all rivers; but if one be compared with another, the preference must be given to the Nile, into which no stream nor fountain enters*.* The reason why in the two opposite seasons of the year the Danube is uniformly the same †, seems to me to be this: in the winter it is at its full natural height, or perhaps somewhat more, at which season there is, in the regions through which it passes, abundance of snow, but very little rain; but in the

* This assertion must be understood with some limitation; after the Nile actually enters Egypt, it certainly is increased by no stream; but in its progress through Abyssinia it is certainly swelled by many rivers, some of which are of considerable magnitude.—T.

† The Danube however certainly varies in its bulk at different seasons, as is proved by Marsigli.
the summer all this snow is dissolved, and emptied into the Danube, which together with frequent and heavy rains greatly augment it. But in proportion as the body of its waters is thus multiplied, are the exhalations of the summer sun. The result of this action and re-action on the Danube, is that its waters are constantly of the same depth.

LI. Thus of the rivers which flow through Scythia, the Danube is the first; next to this is the Tyres, which rising in the north from an immense marsh, divides Scythia from Neuris. At the mouth of this river those Greeks live who are known by the name of the Tyritae.

LII. The third is the Hypanis; this comes from Scythia, rising from an immense lake, round which are found wild white horses, and which is properly enough called the mother of the Hypanis. This river through a space of five days journey from its first rise, is small, and its waters are sweet, but from thence to the sea, which is a journey of four days more, it becomes exceedingly

6o  The Hypanis. — There were three rivers of this name: — One in Scythia, one in the Cimmerian Bosphorus, and a third in India, the largest of that region, and the limits of the conquests of Alexander the Great. This last was sometimes called the Hypasis. — T.
exceedingly bitter. This is occasioned by a small fountain, which it receives in its passage, and which is of so very bitter a quality 61, that it infects this river, though by no means contemptible in point of size: this fountain rises in the country of the ploughing Scythians*, and of the Alazones. It takes the name of the place where it springs, which in the Scythian tongue is Exampœus, corresponding in Greek to the "Sacred "Ways." In the district of the Alazones the streams of the Tyres and the Hypanis have an inclination towards each other, but they soon separate again to a considerable distance.

LIII. The fourth river, and the largest next to the Danube, is the Borysthenes 62. In my opinion this river is more fertile, not only than all the rivers of Scythia, but than every other in

---

61 Bitter a quality.]—This circumstance respecting the Hypanis is thus mentioned by Ovid:

Quid non et Scythicis Hypanis a montibus ortus
Qui fuerat dulcis salibus vitiatur amaris.

It is mentioned also by Pomponius Mela, book ii. c. 1.—T.

62 Herodotus distinguishes the Σκύλαι άρσονेस, from the Σκύλαι γαργαοι.

62 Borysthenes.]—The emperor Hadrian had a famous horse, to which he gave this name; when the horse died, his master, not satisfied with erecting a superb monument to his memory, inscribed to him some elegant verses, which are still in being.—T.
in the world, except the Egyptian Nile. The Nile, it must be confessed, disdains all comparison; the Borysthenes nevertheless affords most agreeable and excellent pasturage, and contains great abundance of the more delicate fish. Although it flows in the midst of many turbid rivers, its waters are perfectly clear and sweet; its banks are adorned by the richest harvests, and in those places where corn is not sown the grass grows to a surprising height; at its mouth a large mass of salt is formed of itself. It produces also a species of large fish, which is called Antææus; these, which have no prickly fins, the inhabitants salt: it possesses various other things which deserve our admiration. The course of the stream may be pursued as far as the country called Gerrhus, through a voyage of forty days, and it is known to flow from the north. But of the remoter places through which it passes, no one can speak with certainty; it seems probable that it runs toward the district of the Scythian husbandmen, through a pathless desert. For the space of a ten days journey these Scythians inhabit its banks. The sources of this river, like those of the Nile, are to me unknown, as I believe they are to every other Greek. This river, as it approaches the sea, is joined by the Hypanis, and they have both the same termination: the neck of land betwixt these two streams is called the Hippoleon promontory, in which a temple
temples is erected to Ceres\textsuperscript{63}. Beyond this temple as far as the Hypanis, dwell the Borysthenites.—But on this subject enough has been said.

LIV. Next to the above, is a fifth river, called the Panticapes; this also rises in the north, and from a lake. The interval betwixt this and the Borysthenes is possessed by the Scythian husbandmen. Having passed through Hylæa, the Panticapes mixes with the Borysthenes.

LV. The sixth river is called the Hypacyris: this, rising from a lake, and passing through the midst of the Scythian Nomades, empties itself into the sea near the town of Carcinitis\textsuperscript{64}. In its course it bounds to the right Hylæa, and what is called the course of Achilles.

LVI. The name of the seventh river is the Gerrhus; it takes its name from the place Gerrhus, near

\textsuperscript{63} To Ceres.]—Some manuscripts read to "Ceres," others to "the Mother"; by this latter expression Ceres must be understood, and not Vesta, as Gronovius would have it. In his observation, that the Scythians were acquainted neither with Ceres nor Cybele, he was perfectly right; but he ought to have remembered that the Borysthenites or Olbiopolitæ were of Greek origin, and that they had retained many of the customs and usages of their ancestors.—Larcher.

\textsuperscript{64} Carcinitis.]—Many are of opinion that this is what is now called Golio di Moscovia; but as this is in the Taurica Chersonesus, now Crimea, it may rather perhaps be Precop, or some adjoining town.
near which it separates itself from the Borystenes, and where this latter river is first known. In its passage toward the sea, it divides the Scythian Nomades from the Royal Scythians, and then mixes with the Hypacyris.

LVII. The eighth river is called the Tanais; rising from one immense lake, it empties itself into another still greater, named the Maeotis, which separates the Royal Scythians from the Sauromatae.—The Tanais is increased by the waters of another river, called the Hyrgis.

LVIII. Thus the Scythians have the advantage of all these celebrated rivers. The grass which this

65 Tanais.——This river is now called the Don. According to Plutarch, in his Treatise of celebrated Rivers, it derived its name from a young man called Tanis, who, avowing an hatred of the female sex, was by Venus caused to feel an unnatural passion for his own mother; and he drowned himself in consequence in this river. It was also called the river of the Amazons; and, as appears from an old scholiast on Horace, was sometimes confounded with the Danube.—It divides Europe from Asia:

Εὐρωπὴν δ’ Ἀσίας Τάναις διὰ μεσσον ἐφιξε.—
Dionysius.

See also Quintus Curtius.—Tanaís Europam et Asiam medius interfuit. l. vi. c. 2. Of this river very frequent mention is made by ancient writers; by Horace prettily enough, in the Ode beginning with “Extremum Tanaim si biberes Lyce, &c.”—T.
this country produces is of all that we know the fullest of moisture, which evidently appears from the dissection of their cattle.

LXI. We have shewn that this people possess the greatest abundance; their particular laws and observances are these: Of their divinities, Vesta is without competition the first, then Jupiter, and Tellus, whom they believe to be the wife of Jupiter; next to these are Apollo, the Coelstial Venus, Hercules, and Mars. All the Scythians revere these as deities, but the Royal Scythians pay divine rites also to Neptune. In the Scythian tongue Vesta is called Tabiti; Jupiter, and, as I think very properly, Pappæus; Tellus,

66 Of their divinities.]—It is not unworthy the attention of the English reader, that Herodotus is the first author who makes any mention of the religion of the Scythians. In most writings on the subject of ancient mythology, Vesta is placed next to Juno, whose sister she was generally supposed to be; Montfaucon also remarks, that the figures which remain of Vesta have a great resemblance to those of Juno. With respect to this goddess, the ancients were much divided in opinion; Euripides and Dionysius of Halicarnassus, agree in calling her Tellus. Ovid seems also to have had this in his mind when he said “Stat vi terra sua, vi stando Vesta vocatur.” Most of the difficulties on this subject may be solved, by supposing there were two Vestas.—T.

* Jortin on Spenser, 57.

† Pappæus]—or Pappæus, signifying father; as being, according to Homer, πατήρ avtov τι δωρ τι, the sire of gods and men. In every language, says Larcher, it is notorious that ap, pa, and papa, are the first sounds by which infants distinguish their fathers.
Tellus, Apia; Apollo, Ætiosyrus; the Cœlestial Venus, Artimpasa; and Neptune, Thamimasadas. Among all these deities Mars is the only one to whom they think it proper to erect altars, shrines, and temples.

**LX.** Their mode of sacrifice in every place appointed for the purpose is precisely the same, and it is this: The victim is secured with a rope, by its two fore feet; the person who offers the sacrifice, standing behind, throws the animal down by means of this rope; as it falls he invokes the name of the divinity, to whom the sacrifice is offered; he then fastens a cord round the neck of the victim, and strangles it, by winding the cord round a stick; all this is done without fire, without libations, or without any of the ceremonies in use amongst us. When the beast is strangled, the sacrificer takes off its skin, and prepares to dress it.

**LXI.** As Scythia is very barren of wood, they have the following contrivance to dress the flesh of the victim:—Having flayed the animal, they strip

---

67 *Who offers the sacrifice.*—Montfaucon, in his account of the gods of the Scythians, apparently gives a translation of this passage, except that he says "the sacrificing priest, after having turned aside part of his veil:" Herodotus says no such thing, nor does any writer on this subject whom I have had the opportunity of consulting.—T.
strip the flesh from the bones, and if they have
them at hand, they throw it into certain pots
made in Scythia, and resembling the Lesbian
caldrons, though somewhat larger; under these a
fire is made with the bones.\footnote{\textit{Fire is made with the bones.}} If these pots can-
not

\footnote{\textit{Fire is made with the bones.}}—Montfaucon remarks on
this passage, that he does not see how this could be done.
Resources equally extraordinary seem to be applied in the
eastern countries, where there is a great scarcity of fuel. In
Persia it appears from Sir John Chardin they burn heath;
in Arabia they burn cow-dung; and according to Dr. Russel
they burn parings of fruit, and such like things. The prophet
Ezekiel was ordered to bake his food with human dung. See
Ezekiel, \textit{chap. iv. 12.} "Thou shalt bake it with dung that
cometh out of man." Voltaire, in his remarks on this pas-
tage, pretends to understand that the prophet was to eat the
dung with his food.—"Comme il n'est point d'usage de
manger de telles confitures sur son pain, la plupart des
hommes trouvent ces commandemens indignes de la Ma-
jesté divin." The passage alluded to admits of no such in-
fERENCE: but it may be concluded, that the burning of bones
for the purpose of fuel was not a very unusual circumstance,
from another passage in Ezekiel.—See \textit{chap. xxiv. 5.} "Take
also the choice of the flock, and burn the bones under it,
and make it boil well."—\textit{T.}—See on this subject of fuel in
Eastern countries, Russel's \textit{Aleppo, i. p. 39.}

The fuel employed for heating them (the bagnios) consists
chiefly of the dung of animals, the filth of stable, and the
parings of fruit, with the offals collected by persons who go
about the streets for that purpose. These materials, accumu-
lated in a yard belonging to the bagnios, both in drying and
when burning are extremely offensive to the neighbourhood.
The bakehouses use brushwood, but these are only trouble-
some an hour or two in the day. Cow-dung is seldom used
not be procured, they enclose the flesh with a certain quantity of water in the paunch* of the victim, and make a fire with the bones as before. The bones being very inflammable, and the paunch without difficulty made to contain the flesh separated from the bone, the ox is thus made to dress itself, which is also the case with the other victims. When the whole is ready, he who sacrifices, throws down with some solemnity before him the entrails, and the more choice pieces. They sacrifice different animals, but horses in particular.

LXII. Such are the sacrifices and ceremonies observed with respect to their other deities; but to the god Mars, the particular rites which are paid are these:—In every district, they construct a temple to this divinity, of this kind; bundles of small wood are heaped together, to the length of three stadia, and quite as broad, but not so high; the top is a regular square, three of the sides are steep and broken, but the fourth is an inclined plane forming the ascent. To this place are every year brought one hundred and fifty waggons

in the city, but by the Arabs and peasants it is not only used as fuel but employed to make a flat pan, in which they fry their eggs. Camel and sheeps dung with brushwood, or stalks of such plants as grow in the desert, are the common fuel.

* I have also heard that in the Isle of Portland, and in other parts of England, fuel is made of dried cow-dung.—The same was done, and probably is still done, in Scotland.
gons full of these bundles of wood, to repair the structure, which the severity of the climate is apt to destroy. Upon the summit of such a pile, each Scythian tribe places an ancient scymetar, which is considered as the shrine of Mars, and is annually honoured by the sacrifice of sheep and horses; indeed more victims are offered to this deity, than to all the other divinities. It is their custom also to sacrifice every hundredth captive, but in a different manner from their other victims*. Having poured libations upon their

* Ancient scymetar.]—It was natural enough that the Scythians should adore with peculiar devotion the god of war; but as they were incapable of forming either an abstract idea, or a corporeal representation, they worshipped their tutelar deity under the symbol of an iron cimeter.—Gibbon.

In addition to this iron cymetar or cimeter, Lucian tells us that the Scythians worshipped Zamolxis as a god. See also Ammianus Marcellinus, xxx. 2.—Nec templum apud eos visitur, aut delubrum, ne tugurium quidem culmo tectum cerni usquam potest, sed gladius Barbarico ritu humi figitur nudus, eunque et Martem regionem quas circumcir- cant præsulem verecundius colunt.

Larcher, who quotes the above passage from Amm. Mar. tells us from Varro, that anciently at Rome the head of a spear was considered as a representation of Mars.

Varro, Festus, and Clemens Alexandrinus, affirm that Mars was worshipped by the Sabines and Romans under the form of a spear. Plutarch, in his Life of Romulus, says, the spear placed in the Royal Palace was called Curis or Quiris.

*—See the History of the Conquest of Mexico, by Bernal
their heads, they cut their throats into a vessel placed for that purpose. With this, carried to the summit of the pile, they besmear the above-mentioned scymetar. Whilst this is doing above, the following ceremony is observed below:— From these human victims they cut off the right arms close to the shoulder, and throw them up into the air. This ceremony being performed on each victim severally, they depart: the arms remain where they happen to fall, the bodies elsewhere.

LXIII. The above is a description of their sacrifices. Swine are never used for this purpose, nor will they suffer them to be kept in their country.

LXIV. Their military customs are these:— Every Scythian drinks the blood of the first person

Diaz del Castillo, translated by Maurice Keating, Esq. p. 142.

These animals were fed with game, fowls, dogs, and, as I have heard, the bodies of Indians who were sacrificed; the manner of which, I have been informed, is this: they open the body of the victim, when living, with large knives of stone; they take out his heart and blood, which they offer to their gods, and then they cut off the limbs and the head, upon which they feast, giving the body to be devoured by the wild beasts, and the sculls they hang up in their temples. How singular must it appear, that in nations so remote, so similar examples of cruelty and superstition should prevail!—T.
son he slays; the heads of all the enemies who fall by his hand in battle, he presents to his king: this offering entitles him to a share of the plunder, which he could not otherwise claim. Their mode of stripping the skin from the head is this:—They make a circular incision behind the ears, then, taking hold of the head at the top, they gradually flay it, drawing it towards them. They next soften it in their hands, removing every fleshy part which may remain, by rubbing it with an ox’s hide; they afterwards suspend it, thus

70 The skin from the head.]—To cut off the heads of enemies slain in battle, seems no unnatural action amongst a race of fierce and warlike barbarians. The art of scalping the head was probably introduced to avoid the trouble and fatigue of carrying these sanguinary trophies to any considerable distance. Many incidents which are here related of the Scythians, will necessarily remind the reader of what is told of the native Americans. The following war-song, from Bossu’s Travels through Louisiana, places the resemblance in a striking point of view:—“I go to war to revenge the death of my brothers—I shall kill—I shall extirpate—I shall burn my enemies—I shall bring away slaves—I shall devour their hearts, dry their flesh, drink their blood—I shall tear off their scalps, and make cups of their skulls.”

The quickness and dexterity with which the Indians perform the horrid operation of scalping is too well known to require any description. This coincidence of manners is very striking, and serves greatly to corroborate the hypothesis, that America was peopled originally from the northern parts of the old continent.—T.
thus prepared, from the bridles of their horses, when they both use it as a napkin, and are proud of it as a trophy. Whoever possesses the greater number of these, is deemed the most illustrious. Some there are who sew together several of these portions of human skin, and convert them into a kind of shepherd's garment. There are others who preserve the skins of the right arms, nails and all, of such enemies as they kill, and use them as a covering for their quivers. The human skin is of all others certainly the whitest, and of a very firm texture; many Scythians will take the whole skin of a man, and having stretched it upon wood, use it as a covering to their horses.

LXV. Such are the customs of this people: this treatment, however, of their enemies, heads, is not universal, it is only perpetrated on those whom they most detest. They cut off the scull, below the eye-brows, and having cleansed it thoroughly, if they are poor, they merely cover it with a piece of leather; if they are rich, in addition to this, they decorate the inside with gold; it is afterwards used as a drinking cup*. They do

---

* William de Rubruquis travelled through Thibet in the 13th century; and it could not be very far from thence that these Scythians lived in the time of Herodotus. Speaking of
do the same with respect to their nearest connections, if any dissensions have arisen, and they overcome them in combat before the king. If any stranger whom they deem of consequence, happen to visit them, they make a display of these heads," and relate every circumstance of the

of the inhabitants, he says, "In times past they bestowed on their parents no other sepulchre than their own bowels, and yet in part retain it, makyng fine cuppes of their deceased parents skulls, that drinking out of them in the middest of their jollitie, they may not forget their progenitors." See Purchas, 430. Hole on the Arabian Nights, p. 257.

Display of these heads.—Many instances may be adduced, from the Roman and Greek historians, of the heads of enemies vanquished in battle being carried in triumph, or exposed as trophies; examples also occur in Scripture of the same custom. Thus David carried the Philistine's head in triumph; the head of Ishboseth was brought to David as a trophy; why did Jael smite off the head of Sisera, but to present it triumphantly to Barak? It is at the present day practised in the East, many examples of which occur in Niebuhr's Letters. This is too well known to require further discussion; but many readers may perhaps want to be informed, that it was also usual to cut off the hands and the feet of vanquished enemies.—The hands and feet of the sons of Rimmon, who slew Ishboseth, were cut off and hanged up over the pool of Hebron.—See also Lady Wortley Montague, vol. ii. p. 19.

"If a minister displeases the people, in three hours time he is dragged even from his master's arms: they cut off his hands, head, and feet, and throw them before the palace gate with all the respect in the world; while the sultan, to whom they all profess unlimited adoration, sits trembling in his apartment."—T.
the previous connection, the provocations received, and their subsequent victory: this they consider as a testimony of their valour.

LXVI. Once a year the prince or ruler of every district mixes a goblet of wine, of which those Scythians drink? who have destroyed a public

It may be added, that the body of Cyrus the younger, as Xenophon tells us in the Anabasis, had its head and right hand cut off.

72 Those Scythians drink.]—These, with many other customs of the ancient Scythians, will necessarily bring to the mind of the reader various circumstances of the Gothic mythology, as represented in the poems imputed to Ossian, and as may be seen described at length in Mallet's Introduction to the History of Denmark. To sit in the Hall of Odin, and quaff the flowing goblets of mead and ale, was an idea ever present to the minds of the Gothic warriors; and the hope of attaining this glorious distinction, inspired a contempt of danger, and the most daring and invincible courage. See Gray's Descent of Odin:

O. Tell me what is done below;
For whom yon glittering board is spread,
Drest for whom yon golden bed.

Pr. Mantling in the goblet see
The pure beverage of the bee;
O'er it hangs the shield of gold,
'Tis the drink of Balder bold. T.

See also in the Edda, the Ode of king Reguer Lodbrog.

"Odin sends his goddesses to conduct me to his palace.—I am going to sit in the place of honour, to drink ale with the gods.—The hours of my life are passed away, I die in rapture." Some of my readers may probably thank me for giving
public enemy*. But of this, they who have not done such a thing are not permitted to taste; these are obliged to sit apart by themselves, which is considered as a mark of the greatest ignominy73. They who have killed a number of giving them a specimen of the stanzas, as preserved by Olau Wormius.

25.
Pugnavimus ensibus:
Hoc ridere me facit semper,
Quod Balderi patris scamna
Parata scio in aula.
Bibemus cerevisiam
Ex concavis crateribus craniorum.
Non gemit vir fortis contra mortem
Magnifici in Odini domibus
Non venis desperabundus
Verbis ad Odini aulam.

29.
Fert animus finire;
Invitant me Dysæ,
Quas ex Odini aula
Odinus mihi misit.
Lætus cerevisiam cum Asis
In summa sede bibam:
Vitæ elapsæ sunt horæ;
Ridens moriar.

* Something of this kind was done by the Parthians, when the head of Crassus was brought to their king. It should be remembered that the Parthians were descendants of Scythians, and not very far removed.

73 Greatest ignominy.]—Ut quisque plures interemit; ita apud eos habetur eximius: cæterùm expertem esse cædis, inter opprobria vel maximum.—Pomp. Mela, l. ii. c. 1.
of enemies, are permitted on this occasion to drink from two cups joined together.

LXVII. They have amongst them a great number who practise the art of divination; for this purpose they use a number of willow twigs\(^74\), in this manner:—They bring large bundles of these together, and having untied them, dispose them one by one on the ground, each bundle at a distance from the rest. This done, they pretend

\[^74\text{Willow twigs.}^\]

Ammianus Marcellinus, in speaking of the Huns, says, "Futura miro praesaginat modo; nam rectiores virgas vimineas colligentes, easque cum incantamentis quibusdam secretis praestituco tempore discernentes, aperte quid portendatur norunt."—Larcher, in quoting the above passage, remarks, that he has seen some traces of this superstition practised in the province of Berry. There is an animated fragment of Ennius remaining, in which he expresses a most cordial contempt for all soothsayers: as it is not perhaps familiar to every reader, I may be excused inserting it.

Non vicinos aruspices, non de circo astrologos,
Non Isiacos conjectores, non interpretes somnium,
Non enim sunt ii aut sapientia aut arte divina,
Sed superstitionis vates, impudentesque harioli,
Aut inertes, aut insanii, aut quibus egestas imperat.

A similar contempt for diviners, is expressed by Jocasta, in the OEdipus Tyrannus of Sophocles:

\[Εμη' παρστος. η μαθ' εεκ' εσι συ\]
\[Βρτσίον οδιν μαντινς εχον τεχνης.\]

Let not a fear perplex thee, OEdipus;
Mortals know nothing of futurity,
And these prophetic seers are all impostors.—T.
tend to foretell the future, during which they take up the bundles separately, and tie them again together.—This mode of divination is hereditary among them. The enaries, or "effeminate men," affirm that the art of divination was taught them by the goddess Venus. They take also the leaves of the lime-tree, which dividing into three parts they twine round their fingers; they then unbind it, and exercise the art to which they pretend.

LXVIII. Whenever the Scythian monarch happens to be indisposed, he sends for three of the most celebrated of these diviners. When the Scythians desire to use the most solemn kind of

75 *Art of divination.*]—To enumerate the various modes of divination which have at different times been practised by the ignorant and superstitious, would be no easy task. We read of hydromancy, libanomancy, onyctomancy, divinations by earth, fire, and air: we read in Ezekiel of divination by a rod or wand. To some such mode of divination, in all probability, the following passage from Hosea alludes. "My people ask counsel at their stocks, and their staff declareth unto them."

This passage affords an additional explanation of that which occurs in vol. i. Whether this phenomenon was more common in Scythia, after a particular event, or whether it were a disease or languor, the subjects of it formed a distinct class of people, and fell into every effeminate excess.—For further remarks on this subject see the end of this volume where the reader will find a novel explanation, for which I am indebted to Mr. Blair.
of oath, they swear by the king's throne: these diviners, therefore, make no scruple of affirming, that such or such individual, pointing him out by name, has forsworn himself by the royal throne.—Immediately the person thus marked out is seized, and informed that by their art of divination, which is infallible, he has been indirectly the occasion of the king's illness, by having violated the oath which we have mentioned. If the accused not only denies the charge, but expresses himself enraged at the imputation, the king convokes a double number of diviners, who, examining into the mode which has been pursued in criminating him, decide accordingly. If he be found guilty, he immediately loses his head, and the three diviners who were first consulted, share his effects. If these last diviners acquit the accused, others are at hand, of whom if the greater number absolve him, the first diviners are put to death.

LXIX. The manner in which they are executed is this:—Some oxen are yoked to a wagon filled with fagots, in the midst of which, with their feet tied, their hands fastened behind, and

76 *King's throne.*—"The Turks at this day," says Larcher, "swear by the Ottoman Porte." Reiske has the same remark: "Adhuc obtinet apud Turcas, per Portam Ottomanicum, hoc est, domicilium sui principis, jurare."—*T.*
and their mouths gagged, these diviners are placed; fire is then set to the wood, and the oxen are terrified to make them run violently away. It sometimes happens that the oxen themselves are burned; and often when the waggon is consumed, the oxen escape severely scorched. This is the method by which, for the above-mentioned or similar offences, they put to death those whom they call false diviners.

LXX. Of those whom the king condemns to death, he constantly destroys the male children, leaving the females unmolested. Whenever the Scythians form alliances, they observe these ceremonies:—A large earthen vessel is filled with wine; into this is poured some of the blood of the contracting parties, obtained by a slight incision of a knife or a sword*; in this cup they dip a scymetar, some arrows, a hatchet, and a spear. After this they pronounce some solemn prayers, and

77 Form alliances.]—See book i. c. 74.
* On this subject, Larcher relates the following anecdote from Daniel's History of France:

"When Henry the Third entered Poland, to take possession of the crown, he found on his arrival thirty thousand cavalry ranged in order of battle. The general of these advancing towards him, drew his sword, pierced his arm with it, and receiving in his hand the blood which flowed from the wound, drank it, saying, "Evil be to him among us who would not shed in your service every drop of his blood; it is from this principle that I count it nothing to shed my own."
and the parties who form the contract, with such of their friends as are of superior dignity, finally drink the contents of the vessel.

LXXI. The sepulchres of the kings are in the district of the Gerrhi. As soon as the king dies, a large trench of a quadrangular form is sunk, near where the Borysthenes begins to be navigable. When this has been done, the body is inclosed in wax, after it has been thoroughly cleansed, and the entrails taken out; before it is sown up, they fill it with anise, parsley-seed, bruised cypress, and various aromatics. They then place it on a carriage, and remove it to another district, where the persons who receive it, like the Royal Scythians, cut off a part of their ear*, shave their heads in a circular form, take a round piece of flesh from their arm, wound their foreheads and noses, and pierce their left hands with arrows. The body is again carried to another province of the deceased king's realms, the

---

78 King dies.—A minute and interesting description of the funeral ceremonies of various ancient nations may be found in Montfaucon, vol. v. 126, &c.—T.

The funeral ceremonies of the Scythian kings, and the golden goblets buried with them under large barrows, remind us of the tombs found in Great Tartary, ascribed to the descendants of Genghis Kan, in the 13th century. See Archaeologia, v. iii. p. 222.

* Bayer, in his Memoriae Scythicae, makes Herodotus say that the Scythians cut off a piece of the king's ear.
the inhabitants of the former district accompanying the procession. After thus transporting the dead body through the different provinces of the kingdom, they come at last to the Gerrhi, who live in the remotest parts of Scythia, and amongst whom the sepulchres are. Here the corpse is placed upon a couch, round which, at different distances, daggers are fixed; upon the whole are disposed pieces of wood, covered with branches of willow. In some other part of this trench, they bury one of the deceased's concubines, whom they previously strangle, together with the baker, the cook, the groom, his most confidential servant, his horses, the choicest of his effects, and, finally, some golden goblets, for they possess neither silver nor brass: to conclude all, they fill up the trench with earth, and seem to be emulous in their endeavours to raise as high a mound as possible*.

* Modern discoveries abundantly prove the general truth of our author's report concerning the sepulchres of the ancient Scythians; if it be allowed that a part of the tumuli, found in the plains towards the upper branches of the Irtish, Oby, &c. are of so antient a date: or, on the other hand, if the sepulchres in question are not so ancient, it at least proves that the same custom prevailed amongst their descendants. It appears, that tumuli are scattered over the whole tract, from the borders of the Wolga and its western branches, to the lake Baikal. Those amongst them, which have attracted the greatest notice, on the score of the gold and silver (but principally the former) contained in them,
The ceremony does not terminate here.—They select such of the deceased king's attendants, in the following year, as have been most about his person; these are all native Scythians, for in Scythia there are no purchased slaves, the king selecting such to attend him as he thinks proper: fifty of these they strangle with

11e between the Wolga and the Oby: for, those which are farther to the east, and more particularly, at the upper part of the Jenisei, have the utensils contained in them, of copper.

It has not come to our knowledge, that any of these monuments have been found in the Ukraine, where the sepulchres described by Herodotus should have been; however, it may be conceived that it is a sufficient testimony of the general truth of his description, that they are found so far west as the southern parts of Russia, and on the banks of the Okka, Wolga, and Tanais; since much the same sort of customs may have been supposed to exist amongst the Scythians and Sarmatians generally; and it is certain that the Sarmatians and seceding Scythians occupied the tracts just mentioned.—Rennel.

They strangle.]—Voltaire supposes that they impaled alive the favourite officers of the khan of the Scythians, round the dead body; whereas Herodotus expressly says that they strangled them first.—Larcher.

Whoever has occasion minutely to examine any of the more ancient authors, will frequently feel his contempt excited, or his indignation provoked, from finding a multitude of passages ignorantly misunderstood, or wilfully perverted. This remark is in a particular manner applicable to M. Voltaire, in whose work false and partial quotations, with ignorant misconceptions of the ancients, obviously abound. The learned Pauw cannot in this respect be entirely exculpated; and I have a passage now before me, in which
with an equal number of his best horses. They open and cleanse the bodies of them all, which having filled with straw, they sew up again: then upon two pieces of wood they place a third, of a semicircular form, with its concave side uppermost, a second is disposed in like manner, then a third, and so on, till a sufficient number have been erected. Upon these semicircular pieces of wood they place the horses, after passing large poles through them, from the feet to the neck. One part of the structure, formed as we have described, supports the shoulders of the horse, the other his hinder parts, whilst the legs are left to project upwards. The horses are then bridled, and the reins fastened to the legs; upon each of these they afterwards place one of the youths who have been strangled, in the following manner: a pole is passed through each, quite to the

which the fault I would reprobate is eminently conspicuous. Speaking of the Chinese laws, he says, "they punish the relations of a criminal convicted of a capital offence with death, excepting the females, whom they sell as slaves, following in this respect the maxim of the Scythians, recorded by Herodotus." On the contrary, our historian says, chap. 70, that the females are not molested. A similar remark, as it respects M. Pauw, is somewhere made by Larcher.—T.

In the mild and polished country of China, the Emperor Chun-Tehi having lost one of his wives, sacrificed more than thirty slaves upon her tomb. He was a Tartar, that is, a Scythian; which historical fact, observes Larcher, may serve to make what Herodotus relates of the ancient Scythians the more credible.
the neck, through the back, the extremity of which is fixed to the piece of timber with which the horse has been spitted; having done this with each, they so leave them.

LXXIII. The above are the ceremonies observed in the interment of their kings: as to the people in general, when any one dies, the neighbours place the body on a carriage, and carry it about to the different acquaintance of the deceased; these prepare some entertainment for those who accompany the corpse, placing the same before the body, as before the rest. Private persons, after being thus carried about for the space of forty days, are then buried. They who

50 Are then buried.]—The Scythians did not all of them observe the same customs with respect to their funerals: there were some who suspended the dead bodies from a tree, and in that state left them to putrefy. "Of what consequence," says Plutarch, "is it to Theodorus, whether he rots in the earth or upon it?—Such with the Scythians is the most honourable funeral."

Silius Italicus mentions also this custom:

At gente in Scythicâ suffixa cadavera truncis
Lenta dies sepelit, putri liquentia tabo.

It is not perhaps without its use to observe, that barbarous nations have customs barbarous like themselves, and that these customs much resemble each other, in nations which have no communication. Captain Cook relates, that in Otaheite they leave dead bodies to putrefy on the surface of the ground, till the flesh is entirely wasted, they then bury the bones.—Larcher. See Hawksworth’s Voyages.
who have been engaged in the performance of
these rites, afterwards use the following mode
of purgation:—After thoroughly washing the
head, and then drying it, they do thus with
regard to the body; they place in the ground
three stakes, inclining towards each other; round
these they bind fleeces of wool as thickly as pos-
sible, and finally, into the space betwixt the stakes
they throw red-hot stones.

LXXIV. They have among them a species
of hemp resembling flax, except that it is both
thicker and larger; it is indeed superior to flax,
whether it is cultivated or grows spontaneously.
Of this the Thracians make themselves garments,
which so nearly resemble those of flax, as to
require a skilful eye to distinguish them: they
who had never seen this hemp, would conclude
these vests to be made of flax.

LXXV. The Scythians take the seed of this
hemp, and placing it beneath the woollen fleeces
which we have before described, they throw it
upon the red-hot stones, when immediately a
perfumed

---

51 Of this the Thracians.—Hesychius says that the Thracian
women make themselves garments of hemp: consult him at
the word Καναλις:—"Hemp is a plant which has some re-
semblance to flax, and of which the Thracian women make
themselves vests."—T.
perfumed vapour$^{52}$ ascends stronger than from any Grecian stove. This, to the Scythians, is in the place of a bath, and it excites from them cries of exultation.

$^{52}$ A perfumed vapour.]—I translate, for the benefit of the reader, what Palaephatus says upon the subject of Medea's magic powers.

Concerning Medea, who was said by the process of boiling to make old men young again, the matter was this; she first of all discovered a flower which could make the colour of the hair black or white; such therefore as wished to have black hair rather than white, by her means obtained their wish. Having also invented baths, she nourished with warm vapours those who wished it, but not in public, that the professors of the medical art might not know her secret. The name of this application was παξηνιασιον, or "the boiling." When therefore by these fomentations men became more active, and improved in health, and her apparatus, namely the caldron, wood, and fire, was discovered, it was supposed that her patients were in reality boiled. Pelias, an old and infirm man, using this operation, died in the process.—T.

The reader will necessarily be impressed with the particular resemblance to this custom, which we find at this day among the Finlanders. The following description is given by one of the latest travellers in that country:

Almost all the forest peasants have a small house built on purpose for a bath; it consists of only one small chamber, in the innermost part of which are placed a number of stones, which are heated by fire till they become red. On these stones thus heated, water is thrown, until the company within be involved in a thick cloud of vapour. In this innermost part, the chamber is formed of two stones for the accommodation of a greater number of persons within that small compass; and it being the nature of heat and vapour to ascend, the second story is of course the hottest, &c.—Acerbi.
exultation. It is to be observed, that they never bathe themselves: the Scythian women bruise under a stone, some wood of the cypress, cedar, and frankincense; upon this they pour a quantity of water, till it becomes of a certain consistency, with which they anoint the body 83 and the face; this

83 Anoint the body.]—When we read in this place of the custom of anointing the body amongst an uncivilized race, in a cold climate, and afterwards find that in warmer regions it became an indispensable article of luxury and elegance with the politest nations, we pause to admire the caprice and versatility of the human mind. The motive of the Scythians was at first perhaps only to obtain agility of body, without any views to cleanliness, or thoughts of sensuality. In hot climates, fragrant oils were probably first used to disperse those fetid smells which heat has a tendency to generate; precious ointments therefore soon became essential to the enjoyment of life; and that they really were so, may be easily made appear from all the best writers of antiquity. See Anacreon, Ode xv.

Let my hair with unguents flow,
With rosy garlands crown my brow.

See also Horace:

--- funde capacibus
Unguenta de conchis.

The same fact also appears from the sacred scriptures; see the threat of the prophet Micah: "Thou shalt tread the olive, but thou shalt not anoint thee with oil." These
this at the time imparts an agreeable odour, and when removed on the following day, gives the skin a soft and beautiful appearance.

LXXVI. The Scythians have not only a great abhorrence of all foreign customs, but each province seems unalterably tenacious of its own. Those of the Greeks they particularly avoid, as appears both from Anacharsis and Scyles. Of Anacharsis it is remarkable, that having personally visited a large part of the habitable world, and acquired great wisdom, he at length returned to Scythia. In his passage over the Hellespont, he touched at Cyzicus, at the time when the inhabitants were celebrating a solemn and magnificent festival to the mother of the gods. He made a vow, that if he should return safe and without injury instances are only adduced to prove that fragrant oils were used in private life for the purposes of elegant luxury; how they were applied in athletic exercises, and always before the baths, is sufficiently notorious.

I might also with great propriety refer to the costly and most precious ointment which was made by Moses at the command of God himself, and to which David so beautifully alludes;—“Behold, how good and joyful a thing it is for brethren to dwell together in unity. It is like the precious ointment upon the head that ran down unto the beard, even unto Aaron’s beard, and went down to the skirts of his clothing.”—T.

*Cyzicus.*—This Cyzicus was formerly an island, but is now a peninsula. It was besieged by Mithridates, and has been described by Pococke. Here also was a temple on Mount Dindymene.
Injury to his country, he would institute, in honour of this deity, the same rites which he had seen performed at Cyzicus, together with the solemnities observed on the eve of her festival. Arriving therefore in Scythia, in the district of Hylæa, near the Course of Achilles, a place abounding with trees, he performed all the particulars of the abovementioned ceremonies, having a number of small statues fastened about him, with a cymbal in his hand. In this situation

85 Eve of her festival.—These festivals probably commenced early on the evening before the day appointed for their celebration; and it seems probable that they passed the night in singing hymns in honour of the god or goddess to whom the feast was instituted. See the Pervigilium Veneris.

—Larcher.

The Pervigilia were observed principally in honour of Ceres and of Venus, and, as appears from Aulus Gellius, and other writers, were converted to the purposes of excess and debauchery.—T.

56 Statues fastened about him.—These particularities are related at length in Apollonius Rhodius, book i. 1139.—This circumstance of the small figures tied together, is totally omitted by Mr. Fawkes in his version, who satisfies himself by saying,

The Phrygians still their goddess' favour win
By the revolving wheel and timbrel's din.

The truest idea perhaps of the rites of Cybele, may be obtained from a careful perusal of the Atys of Catullus, one of the most precious remains of antiquity, and perhaps the only perfect specimen of the old dithyrambic verse.—T.
tion he was observed by one of the natives, who gave intelligence of what he had seen to Saulius, the Scythian king. The king went instantly to the place, and seeing Anacharsis so employed, killed him with an arrow.—If any enquiries are now made concerning this Anacharsis, the Scythians disclaim all knowledge of him, merely because he visited Greece, and had learned some foreign customs: but I have been informed by Timnes, the tutor of Spargapithes, that Anacharsis was the uncle of Idanthyrsus, a Scythian king, and that he was the son of Gnurus, grandson of Lycus, and great-grandson of Spargapithes. If therefore this genealogy be true, it appears that Anacharsis was killed by his own brother; for Saulius, who killed Anacharsis, was the father of Idanthyrsus.*

LXXVII. It is proper to acknowledge, that, from the Peloponnesians I have received a very different account: they affirm that Anacharsis was sent by the Scythian monarch to Greece, for the express purpose of improving himself in science; and they add, that at his return he informed his employer, that all the people of Greece were occupied in scientific pursuits, except the Lacedæmonians; but they alone endeavoured to perfect themselves

*A long life of this Anacharsis may be found in Diogenes Laertius.
themselves in discreet and wise conversation. This, however, is a tale of Grecian invention; I am convinced that Anacharsis was killed in the manner which has been described, and that he owed his destruction to the practice of foreign customs and Grecian manners.

LXXVIII. Not many years afterwards, Scyles, the son of Aripithes, experienced a similar fortune. Aripithes, king of Scythia, amongst many other children, had this son Scyles by a woman of Istria, who taught him the language and sciences of Greece. It happened that you Scythes was treasonably put to death by Spargapithes, king of the Agathyrsi. He was succeeded in his dominions by this Scyles, who married one of his father's wives, whose name was Opæa. Opæa was a native of Scythia, and had a son named Oricus by her former husband. When Scyles ascended the Scythian throne, he was exceedingly averse to the manners of his country, and very partial to those of Greece, to which he had been accustomed from his childhood. As often therefore as he conducted the Scythian forces to the city of the Borysthenites, who affirm that they are descended from the Milesians, he left his army before the town, and entering into the place, secured the gates. He then threw aside his Scythian dress, and assumed the habit of Greece. In this, without guards or attendants, it was his

F F 4  custom
custom to parade through the public square, having the caution to place guards at the gates, that no one of his countrymen might discover him. He not only thus shewed his partiality to the customs of Greece, but he also sacrificed to the gods in the Grecian manner. After continuing in the city for the space of a month, and sometimes for more, he would resume his Scythian dress, and depart. This he frequently repeated, having built a palace in this town, and married an inhabitant of the place.

LXXIX. It seemed however ordained that his end should be unfortunate; which accordingly happened. It was his desire to be initiated into the mysteries of Bacchus; and he was already about to take some of the sacred utensils in his hands, when the following prodigy appeared to him. I have before mentioned the palace which he

87 It seemed however ordained.]—This idea, which occurs repeatedly in the more ancient writers, is most beautifully expressed in the Persæ of Æschylus; which I give the reader in the animated version of Potter.

For when misfortune's fraudulent hand
Prepares to pour the vengeance of the sky,
What mortal shall her force withstand,
What rapid speed th' impending fury fly?
Gentle at first, with flattering smiles,
She spreads her soft enchanting wiles;
So to her toils allures her destin'd prey,
Whence man ne'er breaks unhurt away.  

T.
he had in the city of the Borysthenites; it was a very large and magnificent structure, and the front of it was decorated with sphinxes and griffins of white marble: the lightning of heaven descended upon it, and it was totally consumed. Scyles nevertheless persevered in what he had undertaken. The Scythians reproach the Greeks on account of their Bacchanalian festivals, and assert it to be contrary to reason, to suppose that any deity should prompt men to acts of madness. When the initiation of Scyles was completed, one of the Borysthenites discovered to the Scythians what he had done.—"You Scythians," says he, "censure us on account of our Bacchanalian rites, when we yield to the impulse of the deity. This same deity has taken possession of your sovereign, he is now obedient in his service, and under the influence of his power. If you disbelieve my words, you have only to follow me, and have ocular proof that what I say is true."

88 The lightning.—The ancients believed that lightning never fell but by the immediate interposition of the gods; and whatever thing or place was struck by it, was ever after deemed sacred, and supposed to have been consecrated by the deity to himself. There were at Rome, as we learn from Cicero de Divinatione, certain books called "Libri Fulgurales," expressly treating on this subject. In Ammianus Marcellinus, this expression occurs; "contacta loca nec intueri nec calcari debere pronuntiant libri fulgurales." The Greeks placed an urn over the place where the lightning fell; the Romans had a similar observance.
true." The principal Scythians accordingly followed him, and by a secret avenue were by him conducted to the citadel. When they beheld Scyles approach with his thiasus, and in every other respect acting the Bacchanal, they deemed the matter of most calamitous importance, and returning, informed the army of all that they had seen.

LXXX. As soon as Scyles returned, an insurrection was excited against him; and his brother Octomasades, whose mother was the daughter of Tereus, was promoted to the throne. Scyles having learned the particulars and the motives of this revolt, fled into Thrace; against which place, as soon as he was informed of this event, Octomasades advanced with an army. The Thracians met him at the Ister; when they were upon the point of engaging, Sitalces sent an herald to Octomasades, with this message: "A contest betwixt us would be absurd, for you are the son of my sister. My brother is in your power; if you will deliver him to me, I will give up Scyles to you; thus we shall mutually avoid all danger." As the brother of Sitalces had taken refuge with Octomasades, the above overtures effected a peace. The Scythian king surrendered up his uncle, and received the person of his brother. Sitalces immediately withdrew his army, taking with him his brother: but on that
that very day Octomasades deprived Scyles of his head. Thus tenacious are the Scythians of their national customs, and such is the fate of those who endeavour to introduce foreign ceremonies amongst them.

LXXXI. On the populousness of Scythia I am not able to speak with decision; they have been represented to me by some as a numerous people, whilst others have informed me, that of real Scythians there are but few. I shall relate however what has fallen within my own observation. Betwixt the Borysthenes and the Hypanis, there is a place called Exampæus: to this I have before made some allusion, when speaking of a fountain which it contained, whose waters were so exceedingly bitter, as to render the Hypanis, into which it flows, perfectly impalatable. In this place is a vessel of brass, six times larger than that which is to be seen in the entrance of Pontus, consecrated there by Pausanias* the son

*Consecrated there by Pausanias.]—Nymphis of Heraclea relates, in the sixteenth book of his history of his country, that Pausanias, who vanquished Mardonius at Platea, in violation of the laws of Sparta, and yielding to his pride, consecrated, whilst he was near Byzantium, a goblet of brass to those gods whose statues may be seen at the mouth of the Euxine, which goblet may still be seen. Vanity and insolence had made him so far forget himself, that he presumed to
son of Cleombrotus. For the benefit of those who may not have seen it, I shall here describe it. This vessel which is in Scythia, is of the thickness of six digits, and capable of containing six hundred amphoræ. The natives say that it was made of the points of arrows, for that Ariantas, one of their kings, being desirous to ascertain the number of the Scythians, commanded each of his subjects, on pain of death, to bring him the point of an arrow: by these means, so prodigious a quantity were collected, that this vessel was composed from them. It was left by the prince as a monument of the fact, and by him consecrated at Exampæus.—This is what I have heard of the populousness of Scythia.

To specify in the inscription, that it was he himself who had consecrated it: "Pausanias of Lacedæmon, son of Cleombrotus, and of the ancient race of Hercules, general of Greece, has consecrated this goblet to Neptune, as a monument of his valour."—Athenæus.

What would have been the indignation of this or any historian of that period, if he could have foreseen the base and servile inscriptions dedicated in after-times, in almost all parts of the habitable world, to the Caesars and their vile descendants? Many of these have been preserved, and are an outrage against all decency.—T.

20 Ariantas.]—I have now a remarkable instance before me, how dangerous it is to take upon trust what many learned men put down upon the authority of ancient writers. Hoffman, whose Lexicon is a prodigy of learning and of industry, speaking of this Ariantas, says, "that he made each of his subjects bring him every year the point of an arrow." For the truth of this he refers the reader to Herodotus, and the passage before us. Herodotus says no such thing.—T.
This country has nothing remarkable except its rivers, which are equally large and numerous. If besides these and its vast and extensive plains, it possesses any thing worthy of admiration, it is an impression which they shew of the foot of Hercules. This is upon a rock, two cubits in size, but resembling the footstep of a man; it is near the river Tyras.

Foot of Hercules.—The length of the foot of Hercules was ascertained by that of the stadium at Olympia, which was said to have been measured by him to the length of 600 of his own feet: hence Pythagoras estimated the size of Hercules by the rule of proportion; and hence too the proverb, *ex pede Herculem*, a more modern substitution for the ancient one of *ευανόμως λεόντα.*—See Aul. Gell. l. i. and Erasmus's Adagia, in which the proverb of *ex pede Herculem* has no place. —T.

Similar traditions and superstitions prevail in other parts of the world, and even at this day. The following is from Symes's account of his embassy to Ava:

In the course of our walks, not the least curious object that presented itself was a flat stone, of a coarse grey granite, laid horizontally on a pedestal of masonry, six feet in length and three wide, protected from the weather by a wooden shed. This stone, like that at Ponoodang, was said to bear the genuine print of the foot of Gandma, and we were informed that a similar impression is to be seen on a large rock situated between two hills, one day's journey west of Memboo. On the plane of the foot, upwards of one hundred emblematical figures are engraved in separate compartments: two convoluted serpents are pressed beneath the feet, and five conch-shells with the involutions to the right form the toes: it was explained to me as a type of the creation, and was held in profound reverence. There is said to be a similar impression
LXXXIII. I shall now return to the subject from which I originally digressed.—Darius, preparing to make an expedition against Scythia, dispatched emissaries different ways, commanding some of his dependents to raise a supply of infantry, others to prepare a fleet, and others to throw a bridge over the Thracian Bosphorus. Artabanus, son of Hystaspes, and brother of Darius, endeavoured to dissuade the prince from his purpose, urging with great wisdom the indigence of Scythia; nor would he desist till he found all his arguments ineffectual. Darius, having completed his preparations, advanced from Susa with his army.

LXXXIV. Upon this occasion a Persian, whose name was Oebazus, and who had three sons in the army, asked permission of the king to detain one of them. The king replied, as to a friend, that the petition was very modest, "and that he would leave him all the three." Oebazus was greatly delighted, and considered his three sons as exempted from the service; but the king commanded his guards to put the three young men to death; and thus were the three sons of Oebazus left, deprived of life.

impression on a rock on Adam's Peak, in the island of Ceylon, and it is traditionally believed both by the Birmans, the Siamese, and the Cingalese, that Gaudma or Boodh placed one foot on the Continent, and the other on the island of Ceylon. P. 248.
LXXXV. Darius marched from Susa to where the bridge * had been thrown over the Bosphorus at Chalcedon. Here he embarked and set sail for the Cyanean islands, which, if the Greeks may be believed, formerly floated 92. Here, sitting in the temple 93, he cast his eyes over the Euxine, which

* The bridge of Darius, which was for the purpose of transporting his army into Scythia, through Thrace by the right, was laid across the Bosphorus, now called the Canal of Constantinople.—Rennel.

92 Formerly floated.]—The Cyanean rocks were at so little distance one from the other, that, viewed remotely, they appeared to touch. This optic illusion probably gave place to the fable, and the fable gained credit from the dangers encountered on this sea.—Larcher.

See a description of these rocks, in Apollonius Rhodius: I give it from the version of Fawkes.

When hence your destin'd voyage you pursue,
Two rocks will rise, tremendous to the view,
Just in the entrance of the watery waste,
Which never mortal yet in safety past.
Not firmly fix'd, for oft, with hideous shock,
Adverse they meet, and rock encounters rock.
The boiling billows dash their hairy brow,
Loud thundering round the ragged shore below.

The circumstance of their floating is also mentioned by Valerius Flaccus:

Errantesque per altum
Cyaneas ———

T.

93 In the temple.]—Jupiter was invoked in this temple, under the name of Urius, because this deity was supposed favourable to navigation, ἐγώς signifying a favourable wind. And never could there be more occasion for his assistance than in a sea remarkably tempestuous.—Larcher.
which of all seas most deserves admiration. Its length is eleven thousand one hundred stadia; its breadth, where it is greatest, is three thousand two hundred. The breadth of the entrance is four stadia; the length of the neck, which is called the Bosphorus, where the bridge had been erected, is about one hundred and twenty stadia. The Bosphorus is connected with the Propontis, which flowing into the Hellespont, is five hundred stadia in breadth, and

94 Propontis.]—Between the Bosphorus and the Hellespont, the shores of Europe and Asia, receding on either side, inclose the sea of Marmara, which was known to the ancients by the denomination of Propontis. The navigation from the issue of the Bosphorus to the entrance of Hellespont, is about one hundred and twenty miles. Those who steer their westward course through the middle of the Propontis may at once descry the high lands of Thrace and Bithynia, and never lose sight of the lofty summit of mount Olympus, covered with eternal snows. They leave on the left a deep gulf, at the bottom of which Nicomedia was seated, the imperial residence of Diocletian; and they pass the small islands of Cyzicus and Proconnesus, before they cast anchor at Gallipoli, where the sea which separates Asia from Europe is again contracted into a narrow channel.—Gibbon.

95 Hellespont.]—The geographers, who, with the most skilful accuracy, have surveyed the form and extent of the Hellespont, assign about sixty miles for the winding course, and about three miles for the ordinary breadth of these celebrated streights. But the narrowest part of the channel is found to the northward of the old Turkish castles, between the cities of Sestos and Abydos. It was here that the adventurous Leander braved the passage of the flood for the possession of
four hundred in length. The Hellespont itself, in its narrowest part, where it enters the Egean sea, is forty stadia long, and seven wide.

LXXXVI. The exact mensuration of these seas is thus determined; in a long day a ship will sail the space of seventy thousand orgyæ and sixty thousand by night. From the entrance of the Euxine to Phasis, which is the extreme length of this sea, is a voyage of nine days and eight nights, which is equal to eleven hundred and ten thousand orgyæ, or eleven thousand one hundred stadia. The broadest part of this sea, which is from Sindica to Themiscyra, on the river Thermodon, is a voyage of three days and two

of his mistress:—It was here likewise, in a place where the distance between the opposite banks cannot exceed five hundred paces, that Xerxes composed a stupendous bridge of boats for the purpose of transporting into Europe an hundred and seventy myriads of Barbarians. A sea contracted within such narrow limits may seem but ill to deserve the epithet of broad, which Homer as well as Orpheus has frequently bestowed on the Hellespont.—Gibbon.

56 In a long day.]—That is, a ship in a long day would sail eighty miles by day, and seventy miles by night. See Wesseling's notes on this passage.—T.

57 Sindica.]—The river Indus was often called the Sindus. There were people of this name and family in Thrace. Some would alter it to Sindicon, but both terms are of the same purport. Herodotus speaks of a regio Sindica, upon the Pontus Euxinus, opposite to the river Thermodon. This
two nights, which is equivalent to three thousand three hundred stadia, or three hundred and thirty thousand orgyæ. The Pontus, the Bosporus, and the Hellespont, were thus severally measured by me; and circumstanced as I have already described. The Palus Maeotis flows into the Euxine, which in extent almost equals it, and which is justly called the mother of the Euxine.

LXXXVII. When Darius had taken a survey of the Euxine, he sailed back again to the bridge constructed by Mandrocles the Samian. He then examined the Bosphorus, near which he ordered some would alter to Sindica, but both terms are of the same amount. The Ind or Indus of the east is at this day called the Sind; and was called so in the time of Pliny.—*Bryant.*

* See what Major Rennel says on this subject, p. 53, as well as on the bridges constructed over the Hellespont by Darius and Xerxes, p. 120, & seq.

98 Near which.]—The new castles of Europe and Asia are constructed on either continent upon the foundations of two celebrated temples of Serapis, and of Jupiter Urius. The old castles, a work of the Greek emperors, command the narrowest part of the channel, in a place where the opposite banks advance within five hundred paces of each other. These fortresses were restored and strengthened by Mahomet the Second, when he meditated the siege of Constantinople: but the Turkish conqueror was most probably ignorant that near two thousand years before his reign Darius had chosen the same situation to connect the two continents by a bridge of boats.—*Gibbon.*
ordered two columns of white marble to be erected; upon one were inscribed in Assyrian, on the other in Greek characters, the names of the different nations which followed him. In this expedition he was accompanied by all the nations which acknowledged his authority, amounting, cavalry included, to seventy thousand men, independent of his fleet, which consisted of six hundred ships. These columns the Byzantines afterwards removed to their city, and placed before the altar of the Orthosian Diana, excepting only one stone, which they deposited in their city before the temple of Bacchus, and which was covered with Assyrian characters. That part of the Bosphorus where Darius ordered the bridge to be erected, is, as I conjecture, nearly at the point of middle distance between Byzantium and the temple at the entrance of the Euxine.

LXXXVIII. With this bridge Darius was so much delighted, that he made many valuable presents

99 Orthosian Diana.]—We are told by Plutarch, that in honour of the Orthosian Diana, the young men of Laecdæmon permitted themselves to be flagellated at the altar with the extremest severity, without uttering the smallest complaint.—T.

* See Rennel on this subject, as before quoted.
MELPOMENE.

sents to Mandrocles the Samian, who constructed it: with the produce of these the artist caused a representation to be made of the Bosphorus, with the bridge thrown over it, and the king seated on a throne, reviewing his troops as they passed. This he afterwards consecrated in the temple of Juno, with this inscription:

Thus was the fishy Bosphorus inclos'd,
When Samian Mandrocles his bridge impos'd:
Who there, obedient to Darius' will,
Approv'd his country's fame, and private skill.

LXXXIX. Darius, having rewarded the artist, passed over into Europe: he had previously ordered the Ionians to pass over the Euxine to the Ister, where having erected a bridge, they were to wait his arrival. To assist this expedition, the Ionians and Æolians, with the inhabitants of the Hellespont, had assembled a fleet; accordingly, having passed the Cyanean islands, they sailed directly to the Ister; and arriving, after a passage of two days from the sea, at that part of the river where it begins to branch off, they constructed a bridge. Darius crossed the Bosphorus.

100 Valuable presents.]—Gronovius retains the reading of παρα δίκα, which is very absurd in itself, and ill agrees with the context: the true reading is παρά δίκα, that is, ten of each article presented.—See Casaubon on Athenæus, and others.—T.
phorus, and marched through Thrace, and arriving at the sources of the river Tearus, he encamped for the space of three days.

X.C. The people who inhabit its banks, affirm the waters of the Tearus to be an excellent remedy for various diseases, and particularly for ulcers, both in men and horses. Its sources are thirty-eight in number, issuing from the same rock, part of which are cold, and part warm; they are at an equal distance from Heræum, a city near Perinthus 101, and from Apollonia on the Euxine, being a two days journey from both. The Tearus flows into the Contadesdus, the Contadesdus into the Agrianis, the Agrianis into the Hebrus, the Hebrus into the sea, near the city Ænus.

XCI. Darius arriving at the Tearus, there fixed his camp: he was so delighted with this river, that he caused a column to be erected on the spot, with this inscription: "The sources of the Tearus afford the best and clearest waters in the world:—In prosecuting an expedition against Scythia, Darius son of Hystaspes, the best

101 Perinthus.]—This place was anciently known by the different names of Mygdonia, Heraclea, and Perinthus.—It is now called Pera.—T.
"best and most amiable of men, sovereign of "Persia, and of all the continent, arrived here "with his forces."

XCII. Leaving this place, Darius advanced towards another river, called Artiscus, which flows through the country of the Odrysians. On his arrival here, he fixed upon one certain spot, on which he commanded every one of his soldiers to throw a stone as he passed; this was accordingly done; and Darius, having thus raised an immense pile of stones, proceeded on his march.

XCIII. Before he arrived at the Ister, he first of all subdued the Getæ, a people who pretend to immortality. The Tracians of Salmydessus, and they who live above Apollonia, and the city of Mesambria, with those who are called Cyrmianians, and Mypsæans, submitted themselves to Darius without resistance. The Getæ obstinately defended themselves, but were soon reduced; these,

102 Odrysians.]—Major Rennel refers these Odrysians to Thrace and the quarter in the neighbourhood of Adrianople. Darius comes to them before he arrives among the Getæ, who were seated to the south of the Danube. Mention is made of them by Claudian in his Gigantomachia:

Primus terrificum Mavors non segnis in hostem
Odrisios impellit equos.

Silius Italicus also speaks of Odrisius Boreas.—T.
these, of all the Thracians, are the bravest and the most upright.

XCIV. They believe themselves to be immortal \(^{103}\); and whenever any one dies, they are of opinion that he is removed to the presence of their god Zamolxis \(^{104}\), whom some believe to be

\(^{103}\) They believe themselves to be immortal.]—Arrian calls these people Dacians. "The first exploits of Trajan," says Mr. Gibbon, "were against the Dacians, the most warlike of men, who dwelt beyond the Danube, and who, during the reign of Domitian, had insulted with impunity the majesty of Rome. To the strength and fierceness of Barbarians, they added a contempt for life, which was derived from a vain persuasion of the immortality of the soul."

The Getæ are represented by all the classic writers as the most daring and ferocious of mankind; in the Latin language particularly, every harsh term has been made to apply to them: Nulla Getis toto gens est truculentior orbe, says Ovid. Hume speaks thus of their principles of belief, with respect to the soul's immortality:—"The Getes, commonly called immortal from their steady belief of the soul's immortality, were genuine Theists and Unitarians. They affirmed Zamolxis, their deity, to be the only true God, and asserted the worship of all other nations to be addressed to mere fictions and chimæras: but were their religious principles any more refined on account of these magnificent pretensions?"

It is very easy to see that both Hume and Gibbon are very angry with the poor Getæ, for their belief in the immortality of the soul.—\(T\).

\(^{104}\) Zamolxis.]—Larcher, in conformity to Wesseling, prefers the reading of Zalmoxis.—In the Thracian tongue, Zalmos means the skin of a bear; and Porphyry, in the life of Pythagoras, observes, that the name of Zalmoxis was given him, because as soon as he was born he was covered with the skin of that animal.
the same with Gebeleizes. Once in every five years they choose one by lot, who is to be dispatched as a messenger to Zamolxis, to make known to him their several wants. The ceremony they observe on this occasion is this:—Three amongst them are appointed to hold in their hands, three javelins, whilst others seize by the feet and hands the person who is appointed to appear before Zamolxis; they throw him up, so as to make him fall upon the javelins. If he dies in consequence, they imagine that the deity is propitious to them; if not, they accuse the victim of being a wicked man. Having disgraced him, they proceed to the election of another, giving him, whilst yet alive, their commands. This same people, whenever it thunders or lightens, throw their weapons into the air, as if menacing their god; and they seriously believe that there is no other deity.

XCV. This Zamolxis, as I have been informed by those Greeks who inhabit the Hellespont and the Euxine, was himself a man, and formerly lived at Samos, in the service of Pythagoras, son of Mnesarchus; having obtained his liberty, with considerable wealth, he returned to his country. Here he found the Thracians distinguished equally by their profligacy and their ignorance; whilst he, himself had been accustomed to the Ionian mode of life, and to manners
MELPOMENE.

ners more polished than those of Thrace; he had also been connected with Pythagoras, one of the most celebrated philosophers of Greece. He was therefore induced to build a large mansion, to which he invited the most eminent of his fellow-citizens: he took the opportunity of the festive hour to assure them, that neither himself, his guests, nor any of their descendants, should ever die, but should be removed to a place, where they were to remain in the perpetual enjoyment of every blessing. After saying this, and conducting himself accordingly, he constructed a subterranean edifice: when it was completed, he withdrew himself from the sight of his countrymen, and resided for three years beneath the earth.—During this period, the Thracians regretted his loss, and lamented him as dead. In the fourth year he again appeared among them, and by this artifice gave the appearance of probability to what he had before asserted.

XCVI. To this story of the subterraneous apartment, I do not give much credit, though I pretend not to dispute it; I am, however, very certain that Zamolxis must have lived many years before Pythagoras: whether, therefore, he was a man, or the deity of the Getæ, enough has been said concerning him. These Getæ, using the ceremonies I have described, after submitting themselves
themselves to the Persians under Darius, followed his army.

XCVII. Darius, when he arrived at the Ister, passed the river with his army; he then commanded the Ionians to break down the bridge, and to follow him with all the men of their fleet. When they were about to comply with his orders, Coes, son of Erxander, and leader of the Mytilenians, after requesting permission of the king to deliver his sentiments, addressed him as follows:

"As you are going, Sir, to attack a country, which, if report may be believed, is without cities and entirely uncultivated, suffer the bridge to continue as it is, under the care of those who constructed it:—By means of this, our return will be secured, whether we find the Scythians, and succeed against them according to our wishes, or whether they elude our endeavours to discover them. I am not at all apprehensive that the Scythians will overcome us; but I think that if we do not meet them, we shall suffer from our ignorance of the country. It may be said, perhaps, that I speak from selfish considerations, and that I am desirous of being left behind; but my real motive is a regard for your interest, whom at all events I am determined to follow."

With this counsel Darius was greatly delighted, and thus replied:—"My Lesbian friend, when I shall
"shall return safe and fortunate from this expedi-
"pedition, I beg that I may see you, and I will
"not fail amply to reward you, for your excel-
"lent advice."

XCVIII. After this speech, the king took a cord, upon which he tied sixty knots,\(^{105}\), then sending

\(^{105}\) *Sixty knots.*—Larcher observes that this mode of notation proves extreme stupidity on the part of the Persians.* It is certain, that the science of arithmetic was first brought to perfection in Greece, but when or where it was first introduced is entirely uncertain; I should be inclined to imagine, that some knowledge of numbers would be found in regions the most barbarous, and amongst human beings the most ignorant, had I not now before me an account of some American nations, who have no term in their language to express a greater number than three, and even this they call by the uncouth and tedious name of patarrarorincoursac. In the Odyssey, when it is said that Proteus will count his herd of sea-calves, the expression used is περακοςτία, *he will reckon them by fives*, which has been remarked, as being probably a relic of a mode of counting practised in some remote age, when five was the greatest numeral. To count the fingers of one hand, was the first arithmetical effort: to carry on the account through the other hand was a refinement, and required attention and recollection.

M. Goguet thinks, that in all numerical calculations pebbles were first used: ψηφίσμα, to calculate, comes from ψηφος, a little stone, and the word *calculation* from calculi, pebbles. This is probably true; but between counting by the five fingers and standing in need of pebbles to continue a calculation,

* Larcher is severe upon the Persians, who were certainly not a stupid people. He possibly took this method to prevent the possibility of a mistake.
MELPOMENE.

sending for the Ionian chiefs, he thus addressed them:

"Men of Ionia, I have thought proper to change my original determination concerning this bridge: do you take this cord, and observe what I require; from the time of my departure, there must have been many intervening steps of improvement. A more complicated mode of counting by the fingers was also used by the ancients, in which they reckoned as far as 100 on the left hand, by different postures of the fingers; the next hundred was counted on the right hand, and so on, according to some authors, as far as 9000. In allusion to this, Juvenal says of Nestor,

— Atque suos jam dextrā computat annos.

_Sat. x._ 249.

and an old lady is mentioned by Nicarchus, an Anthologic poet, who made Nestor seem young, having returned to the left hand again:

— ἣς χεῖρ λαίη

Γερας αξιθανεσθαι δευτέρον αρξαμεν.

_Antholog. l. ii._

This, however, must be an extravagant hyperbole, as it would make her above 9000 years old, or there is some error in the modern accounts.—There is a tract of Bede's on this subject which I have not seen; it is often cited. Macrobius and Pliny tell us, that the statues of Janus were so formed, as to mark the number of days in the year by the position of his fingers, in Numa's time 355, after Caesar's correction 365._—_Saturn i._ 9. and _Nat. Hist._ xxxiv. 7.—_T._

On this subject my friend Major Rennel thus expresses himself:

To me it seems clear that the figures called Arabic are from India, through the Arabians. I regard our arithmetic as Indian, and the figures may be traced as clearly as the Roman letters from the Greek.
departure against Scythia, do not fail every
day to untie one of these knots. If they shall
be all loosened before you see me again, you
are at liberty to return to your country; but
in the mean time it is my desire that you pre-
serve and defend this bridge, by which means
you will effectually oblige me." As soon as
Darius had spoken, he proceeded on his march.

For the following remarks on Book i. c. 105, I am indebted to
Mr. Blair.

THREE things should be particularly attended to in the
interpretation of this author's words (Book i. § 105, and
iv. 67.); viz.

1st. That he is naming a bodily infirmity ἕλεκτρα δηνα (fem.
dis.) supposed by the Scythians to have been inflicted as a
punishment for their sacrilege, at the ancient temple of
Venus, in the city of Ascalon.

2dly. That the immediate effects of this disorder were
evident to foreigners who visited the Scythians.

3dly. That this dreadful affliction descended (or was sup-
posed to descend) to the posterity of the delinquents, who
were generally denominated ἑναξία (effeminate men) by the
Scythians.

Various opinions have been entertained respecting the dis-
ease in question; but the one which has been most plausibly
urged, is that Herodotus here means, in decent terms, to
point out a detestable and unnatural crime. It may be
asked, however, why should the author employ an obscure
periphrasis or circumlocution, to express that which in other
parts of the first book (§61, 135) he has depicted very in-
telligibly? Besides, it is not conceivable how any people
should adopt the notion of this abominable vice being in-
flicted as a national punishment; since no man can be so
stupidly
stupidly ignorant as not to know that this sinful habit of which we are speaking is entirely voluntary and acquired.

With regard to the effects of this vile propensity, there can be no doubt that (if it were indulged inordinately) men would by slow degrees become inert, and wholly incapacitated for the rites of a married life: but these do not seem to be the effects intended by Herodotus, when he speaks of their manifest appearance to common observation. Travellers in Scythia were unlikely to discover the enarees by any other than outward and visible symptoms of effeminacy; so that I am at a loss to reconcile this circumstance of notoriety with the opinion of a secret practice which generally superinduces invisible effects. Probably too, this practice itself, if it really prevailed in Scythia, did not exist to that degree which is common in warmer countries; for example, in Italy and in Greece.

But the idea which, in my mind, is most inconsistent with this explanation, is that of the disease being transmitted to the posterity of the delinquents. Now, if the debilitating consequences of this supposed vice rendered the offenders unfit for marriage, they would, à fortiori, be disabled from the power of propagating their own infirmities to posterity! Who could be the descendants of the impotent enarces, their crimes having been punished by an incurable imbecility? May we not thus derive, from the father of history himself, the means of refuting this opinion, although it has been supported by the learning of more numerous and more profound critics, than any other interpretation?

Let us now see whether some light may not be thrown on this inquiry by Hippocrates, who was a countryman of Herodotus, as well as his contemporary; and who has expatiated pretty largely on this effeminate state of the Scythians, in his book περὶ αἰγών, ἔδαπτων, τῶνων.

From Hippocrates we learn that this disease was only experienced by the opulent Scythians; that the notion of its divine original was altogether chimerical and superstitious; that the infirmity was to be attributed to a natural cause, viz. to constant riding on horseback, and exposure to very inclement weather; that its effects were principally confined to
to the hips and lower parts of the body, including the genitals; and that the disorder consisted, not merely in the loss of virility, but in *chronical rheumatic disposi\(\text{tions}^\) (κινδυνώματα) accompanied with lameness and effeminate habits. This is all I can collect from Hippocrates, apart from his theory. The learned Dr. Hensler, indeed, supposes these Scythians had a discharge from the urethra, a malignant kind of gleet: but this does not appear either from the account of Herodotus, or of Hippocrates, and is therefore only a conjectural idea.

Upon the whole, I think these two ancient authors may be sufficiently reconciled, and the one may be adduced in illustration of the other. Both of them speak of the symptoms as evident and permanent, attacking those who had formerly been inured to hardships, and disposing them afterwards to a state of indolence or effeminacy. The natural constitution of the Scythians, in so cold a region, would unfit them, as Hippocrates observes, for connubial duties; and, if the higher classes were chiefly afflicted with this infirmity, it might arise from something peculiar in their mode of living, and so be imagined by the common people to have been an hereditary evil, the fruits of sacrilegious profanations in the temple of Venus.
